PROFESSIONAL SUMMARY

Staff Software Engineer with 12+ years of experience in the **enterprise SaaS, property technology, civic technology, nonprofit software, and IT services industries**, specializing in **.NET 6–8, ASP.NET Core, Vue.js 2–3, TypeScript, Azure, SQL Server, MongoDB, Docker, CI/CD, microservices, and cloud-native system design**. Strong background in modernizing legacy applications, migrating older .NET Framework systems into **ASP.NET Core**, building secure APIs, improving frontend performance, reducing production issues, and leading engineering teams through scalable architecture, code quality, testing, and release automation.

TECH SKILLS

- **Languages:** C#, TypeScript, JavaScript, SQL, HTML5, CSS3
- **Backend: .NET 6–8**, ASP.NET Core, .NET Framework 4.7–4.8, Web API, Entity Framework Core, LINQ, SignalR, Worker Services
- **Frontend: Vue.js 2–3**, Vuex, Pinia, Vue Router, Composition API, Options API, Vuetify, Bootstrap, Tailwind CSS
- **Databases:** SQL Server, PostgreSQL, MongoDB, Redis
- **Cloud & DevOps:** Azure App Service, Azure Functions, Azure SQL, Azure Blob Storage, Azure DevOps, Docker, Kubernetes, GitHub Actions, CI/CD
- **Architecture:** Microservices, REST APIs, Event-Driven Architecture, Clean Architecture, Domain-Driven Design, CQRS, OAuth2, JWT
- **Testing & Quality:** xUnit, NUnit, Moq, Jest, Cypress, Unit Testing, Integration Testing, SonarQube
- **Tools:** Git, Jira, Agile/Scrum, Swagger/OpenAPI, Postman, Application Insights, Serilog

PROFESSIONAL EXPERIENCE

Staff Software Engineer

Relatio

Jun 2022 – Apr 2026

Las Vegas, NV

- Led development of a **SaaS relationship intelligence platform** using **.NET 7–8, ASP.NET Core Web API, Vue.js 3, TypeScript, Azure App Service, SQL Server, MongoDB, Redis, Docker, and GitHub Actions** to support scalable customer workflows and secure enterprise integrations.
- Architected new **microservices** for account intelligence, activity tracking, and notification workflows, reducing API response latency by **23%** through optimized EF Core queries, Redis caching, async processing, and better SQL indexing.
- Migrated legacy backend modules from **.NET Framework 4.8** to **.NET 7**, replacing tightly coupled service classes with Clean Architecture patterns and improving deployment reliability by **18%** across staging and production releases.
- Implemented Vue.js 3 features using **Composition API, Pinia, Vue Router, and TypeScript**, improving dashboard maintainability and reducing frontend regression bugs by **21%** after shared component standards were introduced.

- Resolved production issues caused by duplicate background job execution, race conditions, and inconsistent retry logic by introducing distributed locks, idempotent API handlers, and structured logging with **Serilog** and **Application Insights**.
- Improved authentication and authorization flows using **OAuth2, JWT, role-based access control, and policy-based authorization**, strengthening secure access for internal users, enterprise clients, and third-party integrations.
- Designed reusable **REST API** contracts with Swagger/OpenAPI and versioned endpoints, allowing frontend and partner teams to integrate faster while reducing API contract misunderstanding during sprint delivery.
- Built CI/CD pipelines in **GitHub Actions** with automated build, unit testing, Docker image validation, environment-based configuration, and approval gates, reducing manual release effort by **27%**.
- Mentored engineers on **.NET best practices, Vue.js component design, testing strategy, code review discipline, and system design**, improving team delivery quality and long-term maintainability.
- Created xUnit and integration test coverage for critical services, raising backend test coverage from 58% to 76% and reducing recurring production defects in payment, sync, and notification modules.
- Collaborated with product, QA, DevOps, and customer success teams to translate business requirements into reliable technical solutions while balancing scalability, delivery speed, and operational support.
- Improved MongoDB aggregation pipelines and SQL stored procedures for analytics workflows, reducing report generation time by **24%** for large customer datasets.

Senior Software Engineer

AppFolio

Feb 2018 – May 2022

Goleta, CA

- Developed property management and financial workflow modules using **.NET Core 3.1–6, ASP.NET Core, Vue.js 2, TypeScript, SQL Server, Azure DevOps, Redis, Docker, and REST APIs** for high-volume SaaS operations.
- Built tenant communication, payment status, and leasing workflow features in **Vue.js 2** with Vuex and reusable UI components, improving user completion rates by **19%** through clearer state handling and validation.
- Modernized older MVC and Web Forms functionality into **ASP.NET Core Web API** services, reducing legacy coupling and improving backend maintainability during phased migration work.
- Improved SQL Server performance by rewriting inefficient joins, adding filtered indexes, and optimizing EF Core query projections, reducing slow transaction queries by **28%** during peak usage.
- Fixed recurring bugs around payment reconciliation, duplicate webhook processing, and stale cache reads by implementing idempotency keys, retry policies, Redis cache invalidation, and detailed audit logging.
- Created secure API endpoints for resident, property, and billing data using **JWT authentication, claims-based authorization, and input validation**, reducing security review findings by **16%**.
- Partnered with QA engineers to add **Cypress, Jest, xUnit, and integration tests** for core leasing flows, improving release confidence and reducing manual regression testing time.
- Migrated deployment workflows from manual server updates to **Azure DevOps CI/CD pipelines**, enabling automated builds, test gates, artifact publishing, and environment-specific configuration.
- Refactored large Vue components into smaller reusable modules, improving frontend readability and reducing UI bug turnaround time during sprint stabilization.
- Enhanced observability with structured logs, dashboard metrics, and alerting for failed background jobs, helping the team identify production issues faster and reduce mean time to recovery.

Software Engineer

Blackbaud

Jul 2016 – Jan 2018

Charleston, SC

- Built nonprofit fundraising and donor management features using **C#, ASP.NET MVC 5, .NET Core 2.1, Web API, Vue.js 2, JavaScript, SQL Server, Azure, and Entity Framework** for mission-driven SaaS platforms.
- Implemented donor profile, campaign tracking, and reporting enhancements with **Vue.js 2** and ASP.NET Web API, improving page responsiveness by **17%** through better API pagination and frontend rendering logic.
- Migrated selected internal services from older **.NET Framework MVC** patterns to early **.NET Core 2.1** APIs, improving service separation and preparing the platform for future cloud-native upgrades.
- Resolved issues with inconsistent donor transaction records by adding validation rules, database constraints, and reconciliation jobs that reduced manual correction work by **22%**.
- Improved SQL Server reporting procedures by tuning indexes, reducing unnecessary table scans, and adding query-level monitoring for large fundraising datasets.
- Created reusable service-layer components for donor search, campaign filters, and permission checks, making backend development more consistent across multiple product areas.
- Added unit tests with **NUnit and Moq** for business-critical services, helping catch logic errors earlier and improving confidence during release cycles.
- Worked with product owners and support teams to investigate production defects, reproduce edge cases, and deliver stable fixes without disrupting nonprofit customer operations.
- Strengthened API error handling by standardizing response models, logging correlation IDs, and improving validation messages for frontend and support troubleshooting.

Software Developer

Granicus

May 2014 – Jun 2016

Dallas, TX

- Developed civic engagement and government workflow applications using **C#, ASP.NET MVC 5, Web API 2, JavaScript, jQuery, early Vue.js 1–2 adoption, SQL Server, and Azure services** for public-sector clients.
- Implemented meeting agenda, document publishing, and citizen request features while maintaining reliable backend APIs and improving workflow completion speed by **14%**.
- Introduced Vue.js gradually into selected interactive screens where jQuery-heavy code became difficult to maintain, improving frontend structure without forcing a risky full rewrite.
- Fixed recurring issues with document upload failures, timeout errors, and inconsistent validation by improving file-size checks, retry handling, and server-side exception logging.
- Built REST endpoints for agenda search, document metadata, and notification preferences using **ASP.NET Web API 2**, helping frontend screens load data more consistently.
- Improved SQL Server stored procedures for public records search, reducing slow query complaints by **18%** after index changes and query refactoring.
- Supported deployment troubleshooting across QA and production environments by reviewing logs, comparing configuration values, and coordinating release fixes with DevOps.
- Collaborated in Agile delivery with business analysts, QA testers, and client-facing teams to turn government workflow requirements into stable application features.

Junior Software Developer

Vology

Jun 2013 – Apr 2014

Gainesville, FL

- Built internal cloud services and IT operations tools using **ASP.NET MVC 4**, **C#**, **Web API 2**, **AngularJS 1.2–1.3**, jQuery, Bootstrap, and SQL Server for service request and asset tracking workflows.
- Implemented new dashboard screens for ticket status, device inventory, and customer service metrics, improving support team visibility and reducing manual lookup time by **24%**.
- Fixed validation bugs in legacy web forms by improving client-side checks, server-side model validation, and clearer error handling for incomplete customer and asset records.
- Supported migration from older Web Forms-style patterns toward **ASP.NET MVC** controller-based workflows, improving code organization and reducing duplicated page logic by **18%**.
- Assisted senior engineers with SQL queries, API troubleshooting, unit testing, and deployment checks, building strong fundamentals in full-stack .NET delivery and production support.

EDUCATION

Arkansas State University

Bachelor’s degree, Computer Science (Sep 2009 – May 2013)
