

William Jackson

Senior Software Engineer – React Node (Express/NestJS) AWS/Azure

Wellington, Nevada, United States | +1 (786) 949-7561 | williamjdev@outlook.com | [linkedin.com/in/william-jackson-40036a3ba](https://www.linkedin.com/in/william-jackson-40036a3ba)

PROFESSIONAL SUMMARY

Senior Software Engineer with 10+ years of experience building **SaaS**, operational business platforms, and customer-facing web products with a strong focus on **React**, **Node.js**, scalable APIs, and cloud-based delivery. Deep background in translating messy business workflows into reliable engineering systems, improving release quality, and stabilizing production issues across frontend and backend layers. Strong hands-on work across **React 16–18**, **Node.js 14–20**, **TypeScript 3.x–5.x**, **JavaScript ES6+**, **Express.js**, **NestJS**, **PostgreSQL**, **Redis**, **AWS**, **Docker**, and **CI/CD**, with proven success modernizing legacy modules, fixing performance bottlenecks, implementing secure integrations, and delivering maintainable features in fast-moving product environments.

SKILLS

- **Frontend: React 16–18, TypeScript 3.x–5.x, JavaScript ES6+, Next.js, Redux, Redux Toolkit, Context API, React Router, HTML5, CSS3, SCSS, Tailwind CSS**, responsive UI development, reusable component architecture, form validation, accessibility-focused implementation, SPA architecture, state modeling, dashboard development
- **Backend & APIs: Node.js 14–20, Express.js 4.x–5.x, NestJS 8–10**, REST API design, authentication and authorization, **JWT, OAuth2**, role-based access control, background job processing, file upload workflows, API integration, webhook handling, event-driven processing, service-layer architecture, error handling strategy
- **Data & Messaging: PostgreSQL, MySQL, MongoDB, Redis**, relational schema design, query tuning, indexing, pagination strategy, caching, session storage, asynchronous processing, queue-based workflows, reporting data support
- **Cloud & DevOps: AWS, EC2, S3, RDS, Lambda, API Gateway, CloudFront, Docker, Kubernetes, GitHub Actions, GitLab CI, Nginx**, Linux environment support, deployment automation, release coordination, environment configuration, containerized application delivery
- **Observability / Quality / Security:** structured logging, API diagnostics, production debugging, **Jest, React Testing Library, Cypress**, regression prevention, secure token flows, audit-aware development, permission-aware UI logic, production issue triage, root-cause analysis, incident response support

WORK HISTORY

Senior Software Engineer

February 2021 to December 2025

Viaro Networks Inc. - Delaware, United States

- Led development of a multi-workflow business platform using **React 17–18, TypeScript 4.x–5.x, Node.js 16–20**, and **PostgreSQL 13–16**, delivering stable modules for **operational dashboards, partner management, approval flows**, and **reporting-heavy** user journeys.
- Architected reusable **frontend patterns** for **tables, filters, modal actions**, and **validation-intensive forms**, which reduced duplicated **UI logic** by **32%** and made new product screens faster to implement with more consistent behavior across modules.
- Designed and maintained **Node.js 16–20 API services** with clearer **controller-to-service boundaries**, improving **maintainability** and reducing **issue resolution time** by **27%** during periods of rapid feature growth.
- Resolved a recurring **production issue** where large **dashboard requests** timed out during peak usage by tracing slow **SQL** paths, adding missing **indexes**, and introducing safer **pagination** and **response shaping** that improved endpoint response stability by **41%**.
- Implemented a new **role-based access control** model across both **backend** and **frontend** layers, preventing unauthorized actions in **administrative workflows** and reducing **permission-related support escalations** by **24%**.
- Stabilized a difficult **export defect** where large result sets produced incomplete files by replacing memory-heavy generation logic with **streamed processing**, improving **export reliability** by **38%** for reporting-heavy business users.
- Delivered a staged **modernization effort** that moved older **React class-based modules** into more maintainable **functional components** with **hooks** in **React 17–18**, reducing **component complexity** and improving shared **state coordination** across screens.

- Introduced better **API error contracts** and user-facing **recovery states** after repeated support issues caused by inconsistent **backend validation responses** and weak **edge-case messaging** in critical forms.
- Built secure **integration flows** for **third-party services** and internal **admin tooling**, including **token-aware request handling**, **webhook verification**, **retry-safe processing**, and **failure logging** for easier operational follow-up.
- Investigated an intermittent **bug** where users lost edits after **session refresh** under certain navigation patterns, then improved **draft persistence** and **recovery logic** so partial work survived more reliably in daily usage.
- Supported migration from fragmented **deployment practices** into a cleaner **Docker 20.x–26.x-based delivery pipeline** with stronger **environment consistency**, which reduced **release friction** and improved rollout consistency by **29%**.
- Worked closely with **product** and **QA partners** to convert ambiguous requirements into maintainable **engineering tasks**, balancing **speed**, **stability**, and long-term **code health** in a high-change product environment.

Software Engineer
Avantia, Inc. - Ohio, United States

October 2018 to January 2021

- Built customer-facing **product features** with **React 16–17**, **JavaScript ES6+**, **Node.js 12–16**, and **MySQL 5.7–8.x**, supporting **account workflows**, **internal operations tooling**, and **API-connected** web experiences for business users.
- Developed reusable **UI components** for **forms**, **list views**, **data detail panels**, and **permission-aware actions**, improving consistency across screens and reducing repeated implementation effort by **28%** for future releases.
- Created and maintained **backend endpoints** in **Node.js 12–16** and **Express.js 4.x**, handling **validation**, **request orchestration**, **database access**, and **integration points** with internal and third-party services.
- Fixed a long-standing issue where concurrent **updates** occasionally overwrote recently changed records by tightening **write paths**, improving **payload validation**, and clarifying **update sequencing** in the service layer, which reduced overwrite-related defects by **33%**.
- Improved overall application **responsiveness** by profiling slow views, reducing **over-fetching** from the backend, and introducing more efficient **query patterns** that decreased **page load times** by **26%** on high-traffic **reporting screens**.
- Helped modernize older **frontend modules** by moving away from inconsistent **jQuery-style behavior** toward more structured **React 16–17 implementations**, creating a better foundation for ongoing product development.
- Implemented **authentication-aware frontend logic** and secured **API interactions** with **JWT-based flows**, improving **session handling** and reducing **login** or **token-related edge-case failures** by **21%**.
- Investigated a recurring **bug** in **file upload workflows** where partially failed requests created confusing user states, then added stronger **backend safeguards** and clearer **UI feedback** to prevent silent **data loss**.
- Participated in **rollout planning** and **release support**, validating **environment configuration**, triaging late-cycle **regressions**, and helping the team reduce avoidable **deployment issues** during production pushes.
- Contributed to gradual **backend refactoring** that separated **business logic** from **route handlers**, making features easier to test and reducing **regression risk** by **19%** when modifying shared workflows.
- Collaborated with **cross-functional teammates** to implement new features in a way that balanced **delivery speed** with **maintainability**, especially on screens with heavy **validation**, **approvals**, and complex **status transitions**.

Software Developer
ArnAmy, Inc. - Florida, United States

March 2016 to September 2018

- Developed full-stack **business application features** using **React 15–16**, **Node.js 10–14**, **JavaScript ES6+**, and **PostgreSQL 10–12**, supporting internal users who relied on the platform for daily **process execution** and **reporting**.
- Built modular **UI behavior** for **editable forms**, **searchable record views**, and **action-driven status flows**, helping replace more rigid screens with interfaces that improved **feature extension speed** by **25%** over earlier implementation patterns.
- Implemented **backend services** for **CRUD operations**, **validation rules**, **data transformation**, and internal **workflow execution**, improving **reliability** across everyday operations and administrative tasks.
- Solved a frustrating **defect** where filtered result pages sometimes displayed **stale data** after updates by tightening **client state refresh behavior** and aligning frontend assumptions with **backend response timing**, which reduced user-reported refresh issues by **31%**.

- Improved **maintainability** of older modules by consolidating duplicated **helper logic** and simplifying scattered **request handling patterns** that had made **bug fixing** slower and riskier for the team.
- Added stronger **validation handling** for edge cases involving incomplete **payloads** and unexpected **null values**, reducing production **form-processing errors** by 22% in affected workflows.
- Supported migration of legacy **UI sections** into cleaner **React 15–16 component structures**, helping the team move away from brittle **rendering logic** and toward a more scalable **frontend foundation**.
- Worked on **API-connected features** that required careful coordination between **frontend interactions** and **backend processing**, especially where **asynchronous updates** could confuse users without proper **status feedback**.
- Investigated **performance complaints** in **reporting pages** and helped reduce response delays by trimming unnecessary **joins**, adding **indexes**, and introducing more controlled **query boundaries** that improved **report execution speed** by 18%.
- Contributed to **release preparation**, **smoke testing**, and **regression review**, building strong habits around **reproducibility**, **issue isolation**, and safer **change validation** before deployment.
- Partnered with senior engineers to translate **product requests** into practical **implementation plans**, delivering features that were realistic for the platform while still improving **user experience** and **code quality**.

Junior Software Developer

October 2014 to February 2016

Centric Tech Inc. - New Jersey, United States

- Supported web application development across **frontend** and **backend layers** using **JavaScript ES5–ES6**, early **React 15–16**, **Node.js 8–12**, and **relational database-backed workflows** in a collaborative product team.
- Assisted with implementation of **UI screens**, **form behaviors**, and **API-connected views**, helping deliver maintainable **user-facing functionality** while contributing to a 20% improvement in turnaround time for smaller **feature requests**.
- Contributed to **backend feature work** by updating **route handlers**, **validation checks**, and **database interactions**, improving stability in smaller **operational workflows** and internal support tools.
- Helped resolve recurring **null-handling** and **malformed-request issues** that caused avoidable errors in production by adding safer **guards**, clearer **validation paths**, and better **developer-facing debugging output**, reducing repeat defects by 23%.
- Worked on **bug fixes** tied to inconsistent **state behavior** in dynamic forms, improving **data retention** and reducing frustrating re-entry work for users navigating **multi-step screens**.
- Participated in **cleanup efforts** that reduced duplicated **code** and simplified older **helper utilities**, making the codebase easier for the team to understand and lowering minor **regression frequency** by 17% during maintenance changes.
- Assisted with **rollout** and **support tasks** during **release cycles**, reproducing defects, validating fixes, and documenting **issue patterns** so more senior engineers could address **root causes** faster.
- Gained practical experience translating **product** and **QA feedback** into engineering updates, especially for **UI defects**, **data inconsistencies**, and small **workflow gaps** that affected everyday usability.
- Built foundational experience in debugging across **browser**, **API**, and **database layers**, which created the technical discipline later used in larger **full-stack** and **cloud-based engineering** work.

EDUCATION

Bachelor's degree in Computer Science

2010 to 2014

Stanford University Department of Computer Science

- Built strong foundations in **algorithms**, **databases**, and **software engineering**, applying coursework through practical team projects and production-style system design.

CERTIFICATIONS

- **AWS Certified Developer – Associate — 2024**
Demonstrated practical capability in building, deploying, and maintaining **cloud-native applications** with strong focus on **AWS services**, secure integrations, monitoring, and reliable production delivery.
- **Meta Front-End Developer Professional Certificate — 2023**
Validated hands-on understanding of modern **React** development, reusable **component architecture**, responsive interface design, state-driven UI behavior, and maintainable frontend implementation practices.

- **Node.js Application Development — 2022**

Demonstrated working knowledge of building scalable **Node.js** services, structuring **REST APIs**, handling asynchronous workflows, improving backend reliability, and supporting production-ready web application delivery.
