+1 (430) 279-2231 | markhaney.dev@outlook.com

PROFESSIONAL SUMMARY

Staff Software Engineer and technical lead with 12+ years building SaaS, property technology, civic technology, nonprofit CRM, and managed-service platforms using **Ruby 1.9–3.3, Rails 3.2–7.1, React 15–18, PostgreSQL 9–16, Redis, Sidekiq, AWS, Docker, and CI/CD**, delivering secure APIs, resilient background processing, legacy modernization, and scalable product architecture that improves release velocity, system reliability, and long-term maintainability.

TECH SKILLS

- ❖ **Languages:** Ruby 2.7–3.3, JavaScript ES6+, TypeScript 4–5, SQL, HTML5, CSS3
- ❖ **Ruby on Rails:** Rails 6.1–7.1, Active Record, Action Cable, Action Mailer, Active Job, Hotwire, Turbo, Stimulus, ViewComponent, Sidekiq, Puma, Bundler, Rake
- ❖ **Frontend:** React 16–18, Next.js 12–14, Redux Toolkit, React Query, Tailwind CSS, Material UI, responsive design, accessible UI development
- ❖ **API and Security:** REST APIs, GraphQL, JSON:API, webhooks, API versioning, OAuth2, OpenID Connect, JWT, RBAC, Pundit, CanCanCan, rate limiting, secure session management
- ❖ **Databases and Messaging:** PostgreSQL 12–16, MySQL 5.7–8, Redis 6–7, MongoDB 5–7, DynamoDB, Sidekiq queues, AWS SQS, database migrations, indexing, query optimization
- ❖ **Cloud and DevOps:** AWS EC2, ECS, EKS, RDS, S3, Lambda, CloudFront, SQS, SNS, CloudWatch, Docker, Kubernetes, Terraform, NGINX, GitHub Actions, Jenkins, CircleCI
- ❖ **Testing and Code Quality:** RSpec, FactoryBot, Capybara, SimpleCov, Jest, React Testing Library, Cypress, RuboCop, Brakeman, integration testing, contract testing, load testing
- ❖ **Monitoring:** Datadog, New Relic, Sentry, CloudWatch, Prometheus, Grafana, OpenTelemetry, structured logging, distributed tracing, request correlation
- ❖ **Architecture:** Modular monoliths, microservices, event-driven architecture, domain-driven design, service objects, CQRS, multi-tenancy, caching, idempotency, background processing
- ❖ **Leadership:** System design, technical roadmaps, architecture reviews, code reviews, mentoring, Agile delivery, incident response, root-cause analysis, production support

PROFESSIONAL EXPERIENCE

Staff Software Engineer

Relatio

Jun 2022 – Apr 2026

Las Vegas, NV

- ❖ Led the design and delivery of **Ruby 3.0–3.3, Rails 6.1–7.1, React 18, PostgreSQL**, and **Redis** solutions for customer analytics, workflow automation, and internal operations.
- ❖ Architected a secure **multi-tenant Rails platform** with account-scoped queries, policy-based authorization, audit trails, and service boundaries that supported enterprise growth without cross-customer data exposure.

- ❖ Modernized a legacy **Rails 6.1** application to **Rails 7.1**, replacing deprecated gems, updating Zeitwerk loading rules, strengthening test coverage, and completing the rollout without disrupting active customer workflows.
- ❖ Built versioned **REST and GraphQL APIs** with serializers, request validation, OAuth2 authentication, rate limiting, and backward-compatible contracts for React applications and external integrations.
- ❖ Resolved a recurring production defect where stale Redis fragments displayed incorrect dashboard totals by normalizing cache keys, tuning expiration policies, and adding regression tests across affected account scopes.
- ❖ Implemented configurable workflow features with **RBAC**, bulk actions, webhooks, scheduled jobs, and **Sidekiq** processing, enabling enterprise users to manage high-volume records with reliable retry behavior.
- ❖ Optimized **Active Record** queries, PostgreSQL indexes, eager loading, and background report generation, reducing p95 response time by **34%** during peak customer usage.
- ❖ Created **GitHub Actions**, Docker, Brakeman, RuboCop, and automated deployment gates that validated migrations, scanned dependencies, and enabled rollback-safe releases to AWS environments.
- ❖ Introduced structured logging, request correlation IDs, **Datadog** dashboards, and actionable alert thresholds that shortened incident triage and exposed slow queries before they affected service-level targets.
- ❖ Mentored engineers through architecture reviews, production debugging sessions, pairing, and code-quality standards while balancing hands-on delivery with technical leadership across product, QA, and platform teams.

Senior Software Engineer

AppFolio

Feb 2018 – May 2022

Goleta, CA

- ❖ Built property-management capabilities with **Ruby on Rails**, **React**, **PostgreSQL**, **Redis**, and **AWS** for high-traffic leasing, payments, documents, maintenance, and portfolio reporting workflows.
 - ❖ Developed reusable tenant, owner, payment, and document modules with Rails service objects and React components, reducing duplicated implementation effort by **22%** across related feature teams.
 - ❖ Designed secure REST APIs with strong parameter validation, authorization policies, database transactions, background jobs, and audit events for business-critical property operations.
 - ❖ Upgraded legacy Rails services from **Rails 5.0** to **Rails 6.1**, resolving gem incompatibilities, replacing deprecated callbacks, adopting safer credentials management, and validating behavior through staged releases.
 - ❖ Diagnosed a production issue where payment jobs retried after timeouts and created duplicate status events because handlers lacked durable idempotency checks and transaction-aware recovery.
 - ❖ Implemented idempotent payment processing with Redis locks, unique database constraints, retry-safe Sidekiq workers, and reconciliation jobs that prevented duplicate charges and misleading tenant notifications.
 - ❖ Improved PostgreSQL query plans, composite indexes, counter caches, and cursor-based pagination, reducing large-portfolio dashboard load time by **29%**.
 - ❖ Expanded **RSpec**, FactoryBot, Capybara, Jest, and Cypress coverage for payment submission, lease document upload, permission-sensitive actions, and critical regression scenarios.
 - ❖ Partnered with product, design, QA, security, and infrastructure teams from discovery through release, then supported incidents with log analysis, hotfixes, root-cause reviews, and preventive follow-up work.
-

Software Engineer

Blackbaud

Jul 2016 – Jan 2018

Charleston, SC

- ❖ Delivered nonprofit CRM and fundraising features using **Ruby 2.3–2.5**, **Rails 4.2–5.0**, React 15/16, SQL Server, and REST integrations for donor, campaign, and gift-management workflows.
- ❖ Built donor-management screens, reusable form objects, validation rules, and accessible React components that improved data-entry consistency for nonprofit administrators handling complex constituent records.
- ❖ Developed Rails endpoints and background jobs for campaign updates, donation processing, acknowledgment generation, and reporting exports while preserving compatibility with established enterprise services.
- ❖ Migrated frequently changed server-rendered and jQuery-heavy views into maintainable Rails presenters and React components, reducing UI maintenance effort by **21%**.
- ❖ Fixed an authorization defect that exposed restricted campaign metadata when frontend route checks and backend policy rules evaluated organization access differently.
- ❖ Standardized policy objects, controller authorization checks, and request-level permission tests, closing inconsistent access paths and documenting role behavior for future feature teams.
- ❖ Optimized export queries, batching, and worker memory usage, reducing large fundraising-report failures by **17%** during seasonal donation peaks.
- ❖ Collaborated with QA and product partners on Agile planning, peer reviews, release validation, and cross-team debugging while expanding unit and integration coverage around donation and access-control workflows.

Software Developer

Granicus

May 2014 – Jun 2016

Dallas, TX

- ❖ Developed civic-technology features using **Ruby 2.0–2.2**, **Rails 3.2–4.2**, jQuery, Bootstrap 3, PostgreSQL, and REST services for government communication and digital request management.
 - ❖ Built public forms, administrative workflows, notification templates, and reporting tools that helped municipal teams receive, route, and resolve citizen service requests.
 - ❖ Implemented Rails controllers, service objects, mailers, and scheduled jobs for request routing, status changes, attachment handling, email delivery, and operational reporting.
 - ❖ Modernized selected Rails 3.2 modules to Rails 4.2 by updating routing, strong parameters, asset handling, authentication filters, and gem dependencies through a phased compatibility plan.
 - ❖ Solved a recurring production issue where attachment upload failures left citizen forms in an ambiguous state by adding explicit validation, retry messaging, compensating cleanup, and server-side diagnostics.
 - ❖ Optimized PostgreSQL queries, eager loading, and response payloads, reducing average administrative dashboard load time by **23%** for large municipal accounts.
 - ❖ Worked flexibly across Rails backend development, JavaScript fixes, SQL troubleshooting, QA support, deployment validation, and production incident response as sprint priorities changed.
-

Junior Software Developer

Vology

Jun 2013 – Apr 2014

Gainesville, FL

- ❖ Supported managed IT service tools using **Ruby 1.9.3**, **Rails 3.2**, MySQL, jQuery, Bootstrap 3, and early REST interfaces for ticketing, asset tracking, and customer-service operations.
- ❖ Built dashboard enhancements, ticket workflow updates, data exports, and maintenance scripts that gave operations teams clearer visibility into customer activity and unresolved service issues.
- ❖ Fixed frontend and Rails validation defects that allowed incorrect ticket status transitions, improving service-desk workflow accuracy after business rules and regression tests were added.
- ❖ Assisted with a controlled migration toward **Ruby 2.0**, cleaner Rails concerns, reusable scopes, and shared controller logic while resolving compatibility issues in older gems and deployment scripts.
- ❖ Worked closely with senior engineers to strengthen Git practices, SQL skills, unit testing, production debugging, code review habits, and reliable release procedures in a customer-facing environment.

EDUCATION

Arkansas State University

Bachelor's degree, Computer Science (Sep 2009 – May 2013)
