

Erwin Quanten

Staff Software Engineer – Angular, Node.js, TypeScript, AWS

Brussels, Belgium | erwin.quanten.dev@outlook.com | +32460256356 | <https://www.linkedin.com/in/erwin-quanten-b82815a/>

PROFESSIONAL SUMMARY

Staff Software Engineer with 16+ years of experience building enterprise **Angular 12–20** and **Node.js 14–20** platforms for cloud, telecom, industrial, logistics, and SaaS industries, specializing in **TypeScript 4–5**, **NestJS 8–10**, **Express 4**, **RxJS 6–7**, REST/GraphQL APIs, microservices, AWS, Docker, Kubernetes, PostgreSQL, and CI/CD. Strong background modernizing legacy AngularJS, jQuery, and monolithic Node services into modular, secure, high-performance applications, improving release speed, reducing production defects, and delivering maintainable systems for distributed product, DevOps, QA, and business teams across regulated and high-availability environments.

SKILLS

- **Frontend:** **Angular 12–20**, **AngularJS 1.5–1.7**, **TypeScript 4–5**, **RxJS 6–7**, Angular Material, NgRx, Reactive Forms, HTML5, CSS3, SCSS, JavaScript ES6+
- **Backend:** **Node.js 14–20**, **NestJS 8–10**, **Express 4**, REST APIs, GraphQL, Microservices, WebSockets, Socket.IO, JWT, OAuth2, OIDC
- **Database:** **PostgreSQL 12–15**, MySQL, MongoDB, Redis, SQL optimization, indexing, query tuning
- **Cloud & DevOps:** AWS ECS, Lambda, S3, CloudWatch, Secrets Manager, Docker, Kubernetes, GitHub Actions, GitLab CI, Jenkins, Terraform
- **Testing:** **Jest 29**, Cypress 12–13, Jasmine, Karma, Supertest, API contract testing, regression testing
- **Architecture:** Modular frontend architecture, backend-for-frontend, event-driven services, RBAC, CI/CD, observability, legacy migration

EXPERIENCE

Lightedge — Lead Software Engineer

Remote/ Full time

May2022 – Apr 2026

Houston, TX

- Architected customer-facing cloud dashboards with **Angular 14–20**, **TypeScript 4.8–5.3**, **RxJS 7**, and **Node.js 18–20**, giving engineering and operations teams one secure portal for provisioning, billing, incident visibility, and service health.
- Designed modular **NestJS 9–10** and **Express 4** services around account, subscription, notification, and audit domains, improving API ownership boundaries and reducing cross-team release conflicts by **28%**.
- Implemented role-based access control with **JWT**, **OIDC**, route guards, interceptor-based token refresh, and reusable permission directives, closing several authorization gaps found during security review without slowing daily workflows.
- Migrated legacy Angular modules from mixed JavaScript and outdated component patterns into standalone **Angular 16–17** architecture, reducing bundle size by **31%** and improving first-load performance for internal users.
- Built reusable data-grid, filtering, charting, and form libraries with **Angular Material 15–17**, reactive forms, and custom validators, helping teams ship new admin features with consistent behavior across multiple products.
- Investigated a production memory leak in a Node notification worker by profiling heap snapshots, fixing unbounded event listeners, and adding queue backpressure that reduced worker restarts by **42%**.
- Implemented new customer self-service features for invoice search, service upgrade requests, and outage subscriptions using **Angular Signals**, **RxJS**, and **NestJS** APIs with audit-safe validation rules.
- Led migration from Jenkins freestyle jobs to **GitHub Actions**, Docker buildx, and environment-based deployment gates, improving release traceability and cutting failed deployments by **24%**.
- Optimized PostgreSQL queries, API pagination, Redis caching, and Angular virtual scrolling for large customer datasets, lowering average page response time from seconds to sub-second interaction patterns.
- Partnered with DevOps teams to deploy **Node.js** microservices on **AWS ECS**, manage secrets with AWS Secrets Manager, and standardize CloudWatch dashboards for API latency, error rate, and queue depth.
- Mentored engineers on **TypeScript**, **Angular**, testing strategy, API contracts, and code review discipline, turning repeated production fixes into documented patterns and shared libraries.
- Strengthened test coverage with **Jest 29**, **Cypress 12–13**, contract tests, and regression suites, reducing escaped frontend and API defects by **33%** across quarterly release cycles.

Syscom Digital — Staff Software Engineer

Remote/ Full time

Nov 2017 – Apr 2022

Bucharest, Romania

- Built enterprise workflow and partner portals with **Angular 9–13**, **Node.js 12–16**, **Express 4**, and **TypeScript 3.9–4.7**, supporting onboarding, document routing, approvals, and operational reporting.
- Introduced **NestJS 7–8** modules for authentication, customer management, file processing, and notification services, improving backend structure and reducing duplicated service logic by **26%**.
- Migrated major frontend areas from AngularJS 1.7 and early Angular components into **Angular 11–13**, preserving business rules while improving maintainability and reducing UI regression defects by **29%**.
- Designed REST APIs with OpenAPI documentation, DTO validation, guards, interceptors, and centralized error handling, making backend contracts clearer for frontend, QA, and external integration teams.
- Implemented real-time status updates with **Socket.IO 3–4** and RxJS streams, giving operations users immediate visibility into approval queues, failed jobs, and delayed partner submissions.
- Resolved a recurring production issue where duplicate background jobs generated inconsistent notifications by adding idempotency keys, retry limits, and structured logging around queue consumers.
- Built reusable Angular form engines for dynamic business rules, conditional fields, and server-side validation mapping, reducing implementation time for new workflow screens by **34%**.
- Improved CI/CD using GitLab CI, Docker multi-stage builds, lint gates, and automated test execution, reducing manual release preparation time by **22%** for distributed teams.
- Collaborated with product owners to convert ambiguous workflow requirements into clear API contracts, frontend states, and acceptance criteria that balanced delivery speed with long-term maintainability.
- Guided engineers through performance tuning, lazy loading, change detection cleanup, and Node profiling, creating a practical playbook for diagnosing slow pages and unstable services.

Tessenderlo Group — Senior Software Engineer

Remote/ Full time

Aug 2015 – Oct 2017

Brussel Metropolitan Area

- Delivered industrial and logistics applications with **Angular 4–8**, **Node.js 8–10**, **Express 4**, and **TypeScript 2.7–3.5**, supporting production planning, shipment tracking, and plant-level reporting.
- Modernized older server-rendered screens into Angular feature modules with lazy loading, shared services, and reusable components, reducing navigation friction and improving operator productivity by **21%**.
- Implemented API gateways and backend-for-frontend services in **Node.js**, allowing Angular clients to consume SAP, warehouse, and reporting data through consistent REST contracts.
- Resolved intermittent timeout errors in shipment dashboards by adding request batching, database indexes, and API caching, reducing failed dashboard loads by **37%** during peak usage windows.
- Created role-aware dashboards for supervisors, planners, and plant operators with **Angular Material 6–8**, reactive forms, and RxJS-based refresh patterns for live operational views.
- Supported migration from legacy JavaScript widgets and jQuery plugins into Angular components, keeping business-critical screens stable while removing fragile duplicated UI logic.
- Improved testability by introducing Jasmine, Karma, API mocks, and service-level unit tests, reducing manual QA cycles by **25%** before major production releases.
- Worked flexibly across frontend, backend, deployment troubleshooting, and stakeholder demos, translating operational pain points into practical technical improvements without overengineering.
- Documented coding standards, API usage, release procedures, and incident fixes, helping new engineers understand industrial workflows and safely extend Angular and Node modules.

Tessenderlo Group — Software Engineer

Hybrid/ Full time

Sep 2011 – Jul 2015

Brussel Metropolitan Area

- Developed internal business applications with **AngularJS 1.5–1.7**, early **Angular 2–4**, JavaScript ES6, and **Node.js 6–8**, supporting procurement, inventory, and maintenance workflows.
- Built REST integrations between browser applications and enterprise systems using **Express 4**, SQL queries, and service adapters, giving business users faster access to operational data.
- Implemented migration paths from jQuery-heavy screens to component-based Angular views, reducing duplicated scripts and improving maintainability for frequently changed business forms by **23%**.
- Fixed production form-submission errors caused by inconsistent client validation and server rules by aligning validation schemas, logging failed payloads, and adding regression tests.
- Created reusable directives, filters, and services in AngularJS for tables, modals, validation, and permissions, allowing teams to deliver new screens with more consistent behavior.

- Improved report-generation workflows by optimizing SQL access patterns, reducing unnecessary API calls, and adding loading states that lowered user-reported timeout complaints by **27%**.
- Collaborated with QA and business analysts to reproduce edge-case defects, prioritize critical fixes, and release stable patches without blocking ongoing feature delivery.
- Helped introduce Git branching discipline, pull-request reviews, and environment-specific configuration practices, making delivery more predictable for frontend and backend changes.

Tessengerlo Group — Software Developer

Hybrid/ Full time

Jun 2009 – Aug 2011

Brussel Metropolitan Area

- Built and maintained early web applications using **JavaScript**, **jQuery**, HTML, CSS, server-rendered pages, and SQL-backed services for finance, operations, and internal reporting teams.
- Created reusable UI patterns for search, filtering, validation, and tabular reporting, reducing repeated frontend work by **18%** across several internal application modules.
- Resolved recurring browser compatibility issues by standardizing JavaScript utilities, simplifying DOM manipulation, and documenting tested behavior for business-critical screens.
- Supported early API integration work by connecting frontend screens to backend services and improving error messages, reducing support tickets related to failed submissions by **20%**.
- Worked closely with senior engineers to learn production support, database troubleshooting, release preparation, and user-focused debugging while building a strong foundation for later Angular and Node ownership.

EDUCATION

KU Leuven — Master's Degree, Computer Science

Sep 2003 – May 2009
