

Erwin Quanten

Staff Software Engineer – Vue.js, Node.js, TypeScript, AWS

Brussels, Belgium | erwin.quanten.dev@outlook.com | +32460256356 | <https://www.linkedin.com/in/erwin-quanten-b82815a/>

PROFESSIONAL SUMMARY

Staff Software Engineer with strong experience building **SaaS, cloud, logistics, manufacturing, and enterprise workflow platforms** using **Vue.js 2.6–3.4, Node.js 14–20, TypeScript 4.x–5.x, Express 4.x, NestJS 8–10, PostgreSQL 12–16, MongoDB 4.x–7.x, Docker 20.x–24.x, Kubernetes 1.23–1.29, and AWS cloud services**. Specialized in scalable frontend architecture, secure backend APIs, microservices, performance optimization, migration from legacy systems to modern versions, and production issue resolution, improving release speed, reliability, and maintainability across distributed engineering teams.

SKILLS

- **Frontend:** **Vue.js 2.6–3.4**, Nuxt.js 2–3, Vuex 3–4, Pinia 2.x, Composition API, Options API, JavaScript ES6+, **TypeScript 4.x–5.x**, HTML5, CSS3, SCSS, Tailwind CSS 2–3, BootstrapVue, Vuetify 2–3
- **Backend:** **Node.js 14–20, Express.js 4.x, NestJS 8–10**, REST APIs, GraphQL, WebSockets, Socket.IO, Microservices, API Gateway, JWT, OAuth2, RBAC, Event-Driven Architecture
- **Databases:** **PostgreSQL 12–16**, MongoDB 4.x–7.x, MySQL 5.7–8, Redis 5–7, Prisma, TypeORM, Sequelize, Query Optimization, Database Migration
- **Cloud & DevOps:** **AWS EC2, S3, Lambda, ECS, RDS, CloudFront, API Gateway**, Docker 20.x–24.x, Kubernetes 1.23–1.29, Terraform 1.x, GitHub Actions, GitLab CI/CD, Jenkins, Nginx
- **Testing & Quality:** Jest 27–29, Vitest 0.x–1.x, Cypress 9–13, Playwright 1.x, Mocha, Chai, Supertest, ESLint, Prettier, SonarQube
- **Tools:** Git, Jira, Confluence, Postman, Swagger/OpenAPI, Figma, Datadog, New Relic, Sentry, CloudWatch

EXPERIENCE

Lightedge — Lead Software Engineer

Remote/ Full time

May2022 – Apr 2026

Houston, TX

- Led development of a cloud infrastructure management platform using **Vue.js 3.2–3.4, Node.js 18–20, TypeScript 4.x–5.x**, and **AWS**, supporting enterprise hosting clients with secure self-service workflows.
- Designed reusable **Vue 3 Composition API** modules, shared form controls, permission-based navigation, and dashboard components that improved frontend delivery speed by **23%** across multiple product teams.
- Built backend services with **NestJS 9–10**, PostgreSQL, Redis, and AWS SQS to process provisioning requests, billing events, and customer activity logs with reliable asynchronous execution.
- Migrated legacy **Vue 2.6** screens into **Vue 3.3** with Composition API, Pinia, and Vite, reducing bundle size by **18%** and improving page load performance for internal operations users.
- Resolved a production issue where duplicated provisioning events caused inconsistent server status by adding idempotency keys, Redis locks, and structured retry handling in the **Node.js** service layer.
- Implemented secure **JWT**, OAuth2, and role-based access control across admin and customer portals, reducing unauthorized access risks and simplifying audit review workflows.
- Created REST and GraphQL APIs with **Node.js 18**, OpenAPI documentation, request validation, and centralized error handling to improve API consistency for frontend and partner integrations.
- Improved CI/CD pipelines with GitHub Actions, Docker, and AWS ECS deployments, reducing manual release effort by **27%** and making rollback procedures more predictable.
- Refactored high-traffic customer dashboard queries in PostgreSQL by adding indexes, pagination, and caching, reducing average response time by **31%** during peak usage.
- Integrated Sentry, CloudWatch, and Datadog monitoring to detect frontend runtime errors, backend latency spikes, and failed background jobs before they affected enterprise customers.
- Implemented new billing visibility features with Vue data tables, export flows, audit history, and permission-aware actions, balancing fast delivery with maintainable component boundaries.
- Mentored engineers on **Vue.js, Node.js**, TypeScript patterns, test coverage, and production debugging, helping the team standardize code review quality and release discipline.

Syscom Digital — Staff Software Engineer

Remote/ Full time

Nov 2017 – Apr 2022

Bucharest, Romania

- Architected digital commerce and customer service platforms using **Vue.js 2.6–3.0**, **Node.js 14–18**, **Express 4.x**, MongoDB, PostgreSQL, and AWS for retail and telecom clients.
- Rebuilt large legacy jQuery and server-rendered modules into modular **Vue 2.6** applications, improving maintainability and reducing repeated UI defects by **22%** across core workflows.
- Developed scalable **Node.js** APIs with Express, Redis caching, and queue-based background processing to support order tracking, customer notifications, and third-party service integrations.
- Migrated several backend services from **Node.js 12** to **Node.js 16–18**, updating dependencies, fixing breaking changes, and improving runtime stability in production environments.
- Solved a critical memory leak in a customer notification service by profiling heap snapshots, correcting unclosed listeners, and adding monitoring alerts for abnormal process growth.
- Implemented reusable authentication, customer profile, and payment status modules with **Vuex 3–4**, reducing duplicate frontend logic by **19%** across multiple client applications.
- Improved API response performance by optimizing MongoDB aggregation pipelines, Redis cache keys, and pagination strategy, reducing slow endpoint volume by **28%**.
- Built new partner integration features for CRM, payment gateways, and logistics providers using secure REST APIs, webhook validation, retry queues, and detailed audit logging.
- Introduced Jest, Cypress, ESLint, and automated pipeline quality gates to reduce regression risk and make frontend and backend releases more dependable.
- Collaborated with product owners, designers, QA engineers, and client stakeholders to translate vague business requests into clear technical delivery plans and working software.

Tessenderlo Group — Senior Software Engineer

Remote/ Full time

Aug 2015 – Oct 2017

Brussel Metropolitan Area

- Delivered enterprise manufacturing and supply chain applications using **Vue.js 2.5–2.6**, **Node.js 10–14**, **Express 4.x**, PostgreSQL, SQL Server, and Docker for internal business operations.
- Built production planning dashboards with **Vue.js**, **Vuex**, and REST APIs, helping operations teams track inventory, batch status, and shipment readiness from a centralized interface.
- Migrated older AngularJS and server-rendered screens into maintainable **Vue 2.6** modules, improving frontend consistency and reducing support tickets by **21%** for plant users.
- Developed **Node.js** middleware services to connect ERP data, warehouse systems, and reporting tools while normalizing inconsistent data formats from legacy applications.
- Fixed a recurring production bug where shipment records showed outdated status by correcting cache invalidation logic and adding event-based refresh handling in the API layer.
- Improved database performance by redesigning slow SQL queries, adding targeted indexes, and moving heavy calculations into controlled background jobs, reducing report latency by **26%**.
- Implemented role-based access, approval workflows, and audit logs for sensitive manufacturing actions, strengthening compliance controls across internal enterprise systems.
- Added Docker-based development environments and automated deployment scripts, making onboarding easier and reducing configuration-related setup problems for new engineers.
- Worked flexibly across frontend, backend, database, and DevOps tasks, supporting urgent production incidents while continuing long-term modernization work.

Tessenderlo Group — Software Engineer

Hybrid/ Full time

Sep 2011 – Jul 2015

Brussel Metropolitan Area

- Developed internal business applications for manufacturing, procurement, and logistics teams using **JavaScript ES6**, **Vue.js 2.x**, **Node.js 8–12**, Express, and SQL Server.
- Created reusable UI modules for inventory search, material tracking, approval forms, and operational reporting, improving user workflow completion speed by **17%**.
- Built **Node.js** API endpoints that connected frontend applications with ERP databases, file imports, and reporting services while keeping validation logic centralized.
- Resolved data synchronization issues between legacy systems and new dashboards by adding scheduled reconciliation jobs, error logs, and retry mechanisms.
- Migrated several frontend pages from plain JavaScript and jQuery into **Vue.js 2.x**, reducing duplicate code and making future feature changes easier for the team.

- Implemented export, filtering, and batch update features requested by business users, balancing usability improvements with performance constraints on large datasets.
- Reduced recurring form submission errors by **24%** through stronger client-side validation, backend schema checks, and clearer error messages for non-technical users.
- Participated in architecture reviews, release planning, and production support, gradually expanding from feature development into system ownership responsibilities.

Tessenderlo Group — Software Developer

Hybrid/ Full time

Jun 2009 – Aug 2011

Brussel Metropolitan Area

- Built early web-based internal tools using **JavaScript, Node.js 6–8**, Express, HTML, CSS, SQL Server, and REST APIs for finance, logistics, and operations departments.
- Maintained legacy applications, fixed UI defects, improved form validation, and supported database-driven reporting features used by business teams across multiple locations.
- Implemented small but valuable automation features for file processing, data cleanup, and report generation, reducing manual administrative effort by **16%**.
- Investigated production issues by reviewing logs, database records, and user workflows, then delivered fixes with clear regression testing and deployment notes.
- Supported gradual modernization from older server-rendered pages toward API-driven JavaScript applications, building a strong foundation in frontend, backend, and database work.

EDUCATION

KU Leuven — Master's Degree, Computer Science

Sep 2003 – May 2009
