

Rodrigo Fernandez

Senior Angular / PHP (Laravel/Symfony) Full Stack Engineer

Katy, Texas | +1 (407) 801-1287 | www.linkedin.com/in/rodrigobermejo-fernández-9a5a0664 | rodrigobfdev@gmail.com

Summary

Senior Angular / PHP Full Stack Engineer with experience building **fintech, SaaS, healthcare, eCommerce, and cloud operations** platforms using **Angular 10–18, TypeScript 4–5, PHP 7.4–8.2, Laravel 6–10, and Symfony 4–6**. Strong background modernizing legacy PHP portals, migrating AngularJS or early Angular codebases into modular Angular applications, designing REST APIs, improving MySQL and PostgreSQL performance, fixing production defects, and delivering secure, testable features with AWS, Docker, CI/CD, Redis, and PHPUnit. Known for turning unstable business workflows into scalable products with measurable gains in speed, reliability, and user experience.

Skills

- **Frontend: Angular 10–18**, AngularJS 1.x, **TypeScript 4–5**, JavaScript ES6+, RxJS 6–7, NgRx 8–16, HTML5, CSS3, SCSS, Bootstrap, Angular Material, Responsive UI, Lazy Loading, Reactive Forms, Component Libraries
- **Backend: PHP 7.4–8.2, Laravel 6–10, Symfony 4–6**, CodeIgniter 3, REST API Development, API Versioning, Middleware, Queues, Webhooks, Authentication, Authorization, Composer 2, PHPUnit 8–10
- **Database & Caching: MySQL 5.7–8**, PostgreSQL 12–15, Redis 5–7, Query Optimization, Indexing, Stored Procedures, Data Modeling, Migration Scripts, Performance Tuning
- **Cloud & DevOps: AWS EC2, ECS, S3, RDS**, CloudWatch, Docker, Nginx, Apache, Linux, GitHub Actions, GitLab CI, Jenkins, CI/CD Pipelines, Environment Configuration, Release Automation
- **Testing & Quality:** PHPUnit, PHPStan, ESLint, Jasmine, Karma, Cypress, API Contract Testing, Unit Testing, Integration Testing, Regression Testing, Debugging, Production Incident Fixing
- **Architecture:** Modular Monoliths, Service-Oriented Design, MVC, Domain Services, Repository Pattern, RBAC, JWT, OAuth2, Event-Driven Workflows, Queue-Based Processing, Legacy Migration

Experience

Lightedge — Senior Software Engineer *(Apr 2020 – Mar 2026)*

- Led development of a cloud operations portal using **Angular 14–18, PHP 8.1–8.2, and Laravel 9–10**, supporting provisioning, billing visibility, and customer support workflows across managed infrastructure clients.
- Modernized legacy PHP controllers into service-layer **Laravel** modules with request validation, policy-based authorization, and cleaner exception handling, reducing duplicated backend logic by **34%**.
- Rebuilt complex Angular screens with **TypeScript 4–5, RxJS 7**, and reusable reactive-form components, cutting average ticket submission time by **28%** for support teams.
- Solved recurring production errors caused by stale Redis cache keys and inconsistent API payload contracts by adding cache versioning, structured DTOs, and contract tests.
- Migrated older Angular modules into a lazy-loaded architecture with route guards, shared UI libraries, and stricter lint rules, improving initial bundle size by **31%**.
- Implemented secure REST APIs for account settings, audit history, and usage dashboards with **PHP 8 attributes**, Laravel middleware, pagination, and standardized error responses.

- Improved MySQL 8 query performance by replacing N+1 repository calls, adding composite indexes, and profiling slow dashboard endpoints with New Relic and database logs.
- Built CI/CD workflows with GitHub Actions, Docker, Nginx, and AWS ECS deployment steps, allowing safer releases with automated PHPUnit, PHPStan, ESLint, and Angular test gates.
- Fixed a high-impact invoice mismatch issue by tracing async webhook retries, adding idempotency keys, and creating reconciliation jobs that reduced billing disputes by **22%**.
- Designed role-based access control with **JWT**, granular permissions, and audit logging so customer admins, support engineers, and finance users could share one platform safely.
- Collaborated with product and QA to deliver self-service infrastructure features, using feature flags and staged rollout plans to avoid downtime during customer migrations.
- Maintained flexible ownership across frontend, backend, database, and DevOps tasks, helping the team resolve urgent incidents while still delivering roadmap features consistently.

NIX United — Software Engineer *(Oct 2016 – Mar 2020)*

- Built enterprise SaaS and healthcare modules with **Angular 8–12**, **PHP 7.4–8.0**, **Symfony 4–5**, and **Laravel 6–8**, focusing on secure portals, workflow automation, and reporting features.
- Converted server-rendered PHP pages into Angular components with shared services, route resolvers, and typed models, improving page responsiveness by **35%** for internal users.
- Refactored legacy Symfony controllers into domain services, form request validators, and repository patterns, reducing regression defects by **26%** during release cycles.
- Solved API timeout issues caused by heavy report queries by adding queue-based exports, Redis-backed job status tracking, and optimized PostgreSQL materialized views.
- Implemented patient document and case-management features with secure file upload, permission checks, and audit trails aligned with enterprise compliance expectations.
- Migrated several applications from PHP 7.2 style code toward **PHP 7.4–8.0** compatibility by fixing deprecated syntax, strict typing issues, and Composer dependency conflicts.
- Created Angular state-management patterns with **NgRx 8–11** for multi-step forms, reducing inconsistent UI state bugs across complex approval workflows.
- Improved automated test coverage with PHPUnit, Jasmine, Karma, and Cypress smoke tests, increasing reliable release confidence by **30%** across client projects.
- Resolved intermittent login failures by tracing cookie domain configuration, SameSite behavior, and load-balanced session storage across Nginx and application nodes.
- Integrated REST APIs with payment, identity, and notification providers while adding retry logic, webhook validation, and consistent monitoring for failure visibility.
- Worked across distributed teams as a full stack owner, translating vague business requests into Angular screens, PHP APIs, database changes, and release-ready documentation.

Webiz Digital — Software Developer *(Jan 2014 – Sep 2016)*

- Delivered eCommerce and digital marketing platforms using **AngularJS 1.6**, early **Angular 2–4**, **PHP 5.6–7.2**, Laravel 5.x, WordPress, and WooCommerce customizations.
- Implemented custom checkout, catalog, and campaign-management features that improved conversion tracking accuracy by **24%** across client storefronts and landing pages.
- Fixed common production bugs around payment callbacks, duplicate orders, and tax calculations by adding stronger validation, webhook logs, and retry-safe order updates.
- Migrated several legacy PHP templates into cleaner MVC-style Laravel modules, separating business logic from views and making client change requests faster to deliver.
- Built AngularJS dashboards for campaign analytics, form submissions, and customer segmentation with REST endpoints, reusable directives, and Bootstrap-based responsive layouts.

- Optimized MySQL 5.7 queries, image loading, and caching rules, reducing average product-page load time by **29%** for high-traffic seasonal campaigns.
- Integrated third-party APIs for email marketing, CRM synchronization, shipping rates, and payment providers while handling unstable vendor responses with defensive error handling.
- Improved deployment reliability by standardizing Git branching, environment configuration, Composer dependency management, and rollback steps for shared hosting and VPS environments.
- Supported client-facing troubleshooting by reproducing browser-specific issues, writing clear fixes, and explaining technical tradeoffs in practical business language.
- Expanded skill flexibility across PHP backend work, Angular frontend development, CMS customization, database tuning, and release support for small cross-functional teams.

Aurio — Junior Software Developer *(Oct 2012 – Dec 2013)*

- Developed internal business applications and customer-facing websites using **PHP 5.4–5.6**, CodeIgniter 2–3, jQuery, AngularJS 1.2–1.4, MySQL, HTML5, CSS3, and Bootstrap.
- Built admin panels, CRUD workflows, reporting pages, and basic REST endpoints that helped operations teams replace spreadsheet-based tracking with structured web tools.
- Resolved recurring form validation and session timeout issues by improving server-side checks, client-side feedback, and more predictable authentication handling.
- Created AngularJS components for dynamic filters, inline editing, and dashboard widgets, making internal data-entry workflows faster by **21%** for support users.
- Improved PHP code maintainability by extracting reusable helpers, cleaning duplicated SQL logic, and documenting setup steps for future developers joining the projects.
- Assisted with migration of older procedural PHP pages into CodeIgniter controllers and models, reducing fragile page-level logic and improving testability.
- Fixed MySQL performance issues in reporting screens by indexing frequent filters, limiting expensive joins, and validating query plans before release.
- Supported production releases through manual QA, bug triage, Linux server checks, Apache configuration reviews, and close communication with project stakeholders.
- Built a strong foundation in full stack delivery by handling frontend UI updates, PHP backend fixes, database changes, and client support tasks with reliable follow-through.

Microsoft — Software Developer Intern *(Jun 2012 – Sep 2012)*

- Contributed to internal productivity tools using JavaScript, C#, and SQL under enterprise engineering standards and code review practices.
- Assisted with bug triage, UI fixes, and automation tasks that improved team delivery efficiency during release cycles.
- Created test scripts and documentation that helped validate builds faster and reduce repeated manual checks.
- Learned large-scale development workflow, version control discipline, and professional communication from senior engineers.

Education

Texas State University

Bachelor's Degree in Computer Science *(Sep 2008 – May 2012)*
