

Rodrigo Fernandez

Senior React.js/ Next.js Frontend Engineer

Katy, Texas | +1 (407) 801-1287 | www.linkedin.com/in/rodrigobermejo-fernandez-9a5a0664 | rodrigobfdev@gmail.com

Summary

Senior Full Stack Engineer with 12+ years of experience delivering scalable SaaS, eCommerce, cloud, and enterprise platforms using **React.js 16-18**, **Node.js 12-20**, **TypeScript 4-5**, and **Next.js 12-14**. Strong background building high-traffic REST APIs, modern UI systems, microservices, and real-time applications across fintech, healthcare, logistics, and B2B products. Proven success modernizing legacy JavaScript stacks, reducing production incidents by **45%**, and improving release speed by **60%** through CI/CD automation. Skilled in AWS cloud architecture, database tuning, performance optimization, testing strategy, and secure software delivery. Certified in **AWS Solutions Architect** and Agile delivery practices.

Skills

- **Frontend: React.js 16–18, Next.js 12–14, TypeScript 4–5**, JavaScript ES6+, Redux Toolkit, React Query, React Router, Context API, Hooks, HTML5, CSS3, Sass, CSS Modules, Tailwind CSS, Material UI
- **Backend & API: Node.js 14–20**, Express.js, REST APIs, GraphQL, WebSocket, JWT, OAuth2, OpenID Connect, API versioning, pagination, validation, error handling
- **Testing & Quality:** Jest, React Testing Library, Cypress, Playwright, Storybook, ESLint, Prettier, SonarQube, accessibility testing, cross-browser testing
- **Cloud & DevOps:** AWS, Azure, Docker, Kubernetes, Nginx, GitHub Actions, GitLab CI, Jenkins, Terraform, CloudFront, S3, Lambda, ECS, RDS
- **Databases & Tools:** PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch, Git, Jira, Confluence, Figma, Datadog, Sentry, Prometheus, Grafana

Experience

Lightedge — Senior Software Engineer (Apr 2020 – Mar 2026)

- Led modernization of a large enterprise customer portal from legacy **React.js 16** class components to **React.js 18** hooks and functional patterns, reducing duplicated UI logic and improving developer delivery speed by **32%**.
- Built reusable **TypeScript 4–5** component libraries with Storybook, accessibility rules, and design-token alignment, helping product teams ship consistent dashboards across billing, support, and infrastructure modules.
- Migrated critical routing and state flows from older Redux patterns into **Redux Toolkit** and React Query, removing stale cache bugs that previously caused incorrect account status rendering in production.
- Resolved a high-impact memory leak caused by uncleaned WebSocket subscriptions in live infrastructure status screens, cutting browser crashes by **41%** during long admin sessions.
- Implemented role-based UI permissions with JWT claims, OAuth2 flows, and backend-driven feature flags, reducing unauthorized action defects and improving audit readiness for enterprise customers.
- Optimized React rendering with memoization, lazy loading, code splitting, and bundle analysis, improving Largest Contentful Paint by **36%** on high-traffic dashboard pages.
- Created complex data-grid experiences for usage reports, invoices, alerts, and account history using server-side pagination, column virtualization, export workflows, and resilient empty-state handling.

- Integrated React applications with **Node.js 14–20** REST APIs and GraphQL endpoints, standardizing error contracts so frontend screens could handle validation, timeout, and permission failures cleanly.
- Improved production observability by connecting Sentry, Datadog, and custom frontend metrics, helping the team identify JavaScript runtime errors before they became repeated customer tickets.
- Partnered with DevOps teams to ship React builds through Docker, GitHub Actions, AWS CloudFront, and environment-based configuration, reducing deployment rollback risk by **28%**.
- Introduced Jest, React Testing Library, and Cypress coverage for checkout, billing, and account-management workflows, preventing repeated regression bugs during rapid release cycles.
- Mentored frontend engineers on **React.js 18**, TypeScript typing strategy, component boundaries, code review discipline, and performance debugging across complex enterprise UI modules.

NIX United — Software Engineer *(Oct 2016 – Mar 2020)*

- Developed customer-facing SaaS applications with **React.js 15–16**, Redux, JavaScript ES6, TypeScript 2–3, and Webpack, supporting product teams across logistics, finance, and healthcare clients.
- Migrated several jQuery-heavy screens into maintainable React components, reducing DOM manipulation defects and making complex form behavior easier to test and extend.
- Built reusable form engines with validation, async lookups, masked inputs, and conditional business rules, lowering production form-submission errors by **27%** across client onboarding flows.
- Fixed race-condition issues in Redux async actions where fast user navigation caused stale profile data to appear, replacing fragile promise chains with safer request cancellation patterns.
- Implemented responsive dashboards with charts, filters, export actions, and server-side sorting, helping business users analyze operational metrics without relying on manual spreadsheet reports.
- Improved frontend performance by splitting Webpack bundles, removing unused dependencies, and applying route-based lazy loading, reducing initial JavaScript payload by **34%**.
- Worked closely with backend teams using **Node.js 8–12**, Express.js, PostgreSQL, and REST APIs to align frontend contracts with stable versioned endpoints.
- Created reusable authentication flows with JWT, refresh-token handling, protected routes, and user-session recovery, reducing login-related support tickets by **22%**.
- Added Jest and Enzyme tests for shared components and Redux reducers, strengthening release confidence for large client platforms with frequent requirement changes.
- Supported production debugging through browser profiling, network tracing, and log correlation, resolving rendering, caching, and inconsistent API-response issues under tight release timelines.
- Collaborated flexibly across frontend, backend, QA, and client-facing discussions, translating business requirements into stable React features without overengineering the solution.

Webiz Digital — Software Developer *(Jan 2014 – Sep 2016)*

- Built interactive marketing, eCommerce, and booking interfaces using JavaScript ES6, early **React.js 0.14–15**, jQuery, Bootstrap, Sass, and REST-based integrations.
- Converted repeated landing-page widgets into reusable JavaScript and React components, improving consistency across client websites and reducing delivery time by **25%**.
- Fixed browser compatibility issues in Safari, Internet Explorer, and mobile Chrome by replacing fragile CSS hacks with tested responsive layouts and safer event-handling patterns.
- Implemented cart, checkout, filtering, and account screens connected to PHP and Node.js services, improving customer journeys for small business and retail clients.
- Optimized image-heavy pages with lazy loading, compression, cache headers, and asset bundling, improving average page-load speed by **31%** on campaign websites.
- Resolved production issues where duplicate form submissions created repeated leads, adding frontend debounce logic and backend idempotency checks with clear user feedback.

- Created admin-facing UI modules for content editing, campaign tracking, and customer inquiries, helping nontechnical users manage digital operations without developer support.
- Worked with designers through Figma and Zeplin-style handoffs, translating visual requirements into clean HTML5, CSS3, and accessible interactive components.
- Added unit and smoke tests around critical JavaScript behavior, reducing regressions during frequent client changes and urgent campaign launches.
- Strengthened frontend foundations by applying component-based thinking before React became the main stack, making later React adoption smoother and more practical.

Aurio — Junior Software Developer *(Oct 2012 – Dec 2013)*

- Supported business web applications using JavaScript, jQuery, HTML5, CSS3, Bootstrap, PHP, and MySQL, building a strong frontend foundation before modern React adoption became common.
- Created responsive UI screens for internal reporting, customer records, and content workflows, improving usability for staff who previously depended on manual spreadsheet updates.
- Fixed layout breakage, validation errors, and inconsistent browser behavior by testing across common desktop and mobile browsers and documenting repeatable frontend fixes.
- Implemented AJAX-based interactions for search, filtering, and form submission, reducing full-page reloads and making older web applications feel faster for business users.
- Improved client-side validation and server response handling, reducing repeated data-entry mistakes and helping support teams resolve user issues with clearer error messages.
- Refactored duplicated JavaScript utilities into shared files, making maintenance easier and reducing small regression bugs across related pages and admin screens.
- Worked with senior developers on REST-style endpoints, SQL queries, and template rendering, gaining practical understanding of how frontend behavior depends on backend contracts.
- Assisted QA with reproduction steps, browser screenshots, and defect notes, helping engineers identify root causes faster during production support cycles.
- Built early discipline in clean markup, progressive enhancement, accessibility basics, and practical debugging that later supported stronger **React.js** engineering work.

Microsoft — Software Developer Intern *(Jun 2012 – Sep 2012)*

- Supported internal engineering tools using **C#**, **.NET Framework 4.0–4.5**, **ASP.NET MVC 3–4**, JavaScript, jQuery, and SQL Server, gaining practical experience in enterprise software quality and structured development workflows.
- Assisted senior engineers with debugging UI defects, validation issues, and data-handling problems, documenting root causes clearly so fixes could be reviewed and released with lower regression risk.
- Built small internal web modules for tracking records, reviewing status changes, and improving team visibility, applying clean HTML, CSS, JavaScript, and backend integration patterns.
- Resolved early-stage bugs related to inconsistent form validation and SQL query results by reproducing issues locally, checking logs, and working with mentors to apply safer input-handling rules.
- Learned professional engineering practices around code reviews, source control, test cases, documentation, and release discipline, which later became the foundation for stronger **React.js** and full-stack delivery.

Education

Texas State University

Bachelor's Degree in Computer Science *(Sep 2008 – May 2012)*
