

PROFESSIONAL SUMMARY

Senior **React/Django** Full Stack engineer with 12+ years across SaaS, property technology, nonprofit platforms, civic technology, and IT services, specializing in **React, TypeScript 5.x, Python 3.10-3.12, Django, PostgreSQL, AWS** for secure, scalable platforms; delivers **architecture** ownership, modernization, **performance** tuning, **test automation**, **CI/CD** discipline, and **production reliability** that improves customer workflows, **release quality**, and engineering velocity.

TECH SKILLS

- Full-Stack Engineering: **React, TypeScript 5.x, Python 3.10-3.12, Django, PostgreSQL, AWS**, modern frontend **architecture**, backend services, **REST APIs, GraphQL APIs, OpenAPI**, secure session handling
- Backend & Data: **PostgreSQL 13-16, MySQL 8, MongoDB 6-7, Redis 6-7**, database indexing, schema migration, caching, background jobs
- Cloud & DevOps: **AWS, Azure, Docker, Kubernetes, Terraform 1.x, GitHub Actions, Jenkins, CI/CD**, feature flags, blue-green releases
- Testing & Quality: Unit, integration, API, end-to-end, contract, load, and regression testing with senior-level code review and static analysis
- **Architecture: Microservices**, modular monoliths, **event-driven** workflows, domain-driven design, **observability, security, performance** optimization

PROFESSIONAL EXPERIENCE

Staff Software Engineer

Relatio

Jun 2022 - Apr 2026

Las Vegas, NV

- Led full-stack **architecture** for a SaaS workflow and analytics platform using **React, TypeScript 5.x, Python 3.10-3.12, Django, PostgreSQL, AWS**, improving end-to-end feature delivery speed by **28%** through cleaner service boundaries and reusable UI patterns.
- Designed secure **REST** and **GraphQL** integrations between frontend modules, backend services, **PostgreSQL** models, and background jobs, reducing integration defects by **19%** across release cycles.
- Modernized legacy workflow screens and synchronous backend handlers into modular product capabilities with feature flags, audited state changes, and safer deployment gates.
- Resolved production issues involving slow report queries, stale UI state, duplicate submissions, and inconsistent background job retries during peak customer activity.
- Improved **CI/CD** pipelines with automated unit, API, integration, and end-to-end tests so full-stack releases reached production with fewer rollback risks.
- Implemented **observability** across client errors, **API latency**, database bottlenecks, and queue depth so engineering teams could diagnose incidents from a single operational view.
- Refactored authentication, permission checks, and tenant-scoped access into reusable platform patterns that reduced duplicated logic across multiple product areas.
- Partnered with product and design leaders to deliver configurable rules, audit trails, dashboard filters, and scheduled workflow automation for enterprise customers.
- Mentored engineers on component boundaries, service-layer design, database migrations, **performance** profiling, and pragmatic production debugging practices.

Senior Software Engineer

AppFolio

Feb 2018 - May 2022

Goleta, CA

- Built full-stack property technology features using earlier versions of **React, TypeScript 5.x, Python 3.10-3.12, Django, PostgreSQL, AWS**, improving rental workflow processing speed by **24%** through better API design and frontend responsiveness.
- Implemented tenant communication, payment, and document workflows with secure validation, transaction logging, background jobs, and **customer-facing** status visibility.
- Migrated older application modules from tightly coupled views into reusable service and UI patterns, improving test coverage and reducing duplicated business rules.
- Fixed defects involving duplicate payment notifications, timeout errors, inconsistent UI confirmations, and incorrect status transitions by adding idempotency and stronger constraints.
- Optimized database queries, API payloads, and client-side rendering for lease records, reporting pages, and high-read lookup data used by property managers.
- Improved regression protection with unit, integration, and browser smoke tests that covered high-risk leasing, payment, and notification workflows.
- Collaborated with QA and product teams to reproduce complex customer issues, deliver targeted full-stack fixes, and avoid broad regression risk.
- Mentored mid-level developers on API contracts, frontend state management, database modeling, and production support during feature delivery.

Software Engineer

Blackbaud

Jul 2016 - Jan 2018

Charleston, SC

- Developed full-stack nonprofit fundraising and donor management capabilities using web UI modules, backend APIs, relational data models, and message-based processing.
- Improved donor search and campaign reporting workflows by **21%** through query tuning, better API payloads, and user-facing filters for large customer datasets.
- Implemented secure data import workflows with validation rules, duplicate detection, transactional saves, and detailed error reporting for support teams.
- Resolved bugs related to malformed CSV imports, timezone conversion, partial transaction failures, and confusing UI feedback by adding stricter parsing and rollback-safe processing.
- Built reusable components and API handlers for campaign records, donor profiles, activity history, and reporting flows with consistent backend behavior.

- Added automated tests around donation, reporting, and import workflows, improving release confidence and reducing regression defects during product expansion.
- Worked with DevOps to improve deployment checks, environment configuration, and application logging so production issues could be identified faster.

Software Developer

Granicus

May 2014 - Jun 2016

Dallas, TX

- Built civic technology product features for agenda management, public records, document publishing, and subscription workflows across UI and backend services.
- Improved notification reliability and document workflow clarity through stronger validation, retry handling, and user-facing operational feedback.
- Implemented REST endpoints and web screens while keeping permission checks, audit behavior, and customer configuration consistent across internal modules.
- Fixed production issues involving failed uploads, missing metadata, slow search responses, and inconsistent portal states by improving validation and database indexing.
- Migrated older utilities into maintainable services with clearer configuration management, logging, and reusable exception-handling patterns.
- Worked with support teams to investigate customer incidents, reproduce errors, and deliver safe patches without disrupting active government portals.

Junior Software Developer

Vology

Jun 2013 - Apr 2014

Gainesville, FL

- Supported internal IT services applications using web forms, backend scripts, **MySQL**, Linux tools, and deployment checklists for automation and maintenance.
- Built small full-stack utilities for ticket routing, inventory updates, and operational reporting that reduced repetitive manual work for internal teams.
- Fixed bugs in legacy scripts and web pages involving bad input handling, missing null checks, inconsistent database updates, and unclear user feedback.
- Assisted senior engineers with API maintenance, database scripts, and deployment preparation while learning production debugging and release discipline.
- Wrote unit tests, technical notes, and troubleshooting guides for internal applications, helping the team maintain older systems with fewer support escalations.

SELECTED PROJECTS

- SaaS Workflow Automation Platform: Delivered a full-stack rules, audit, and reporting product with **React**, **TypeScript 5.x**, **Python 3.10-3.12**, **Django**, **PostgreSQL**, **AWS**, **PostgreSQL**, **Redis**, **Docker**, and **CI/CD** controls that improved enterprise workflow throughput by **24%**.
- Customer API and Dashboard Suite: Built secure APIs, admin screens, background jobs, and **observability** dashboards with **React**, **TypeScript 5.x**, **Python 3.10-3.12**, **Django**, **PostgreSQL**, **AWS**, enabling product teams to release integrations with clearer contracts and fewer support escalations.

EDUCATION

Arkansas State University - Bachelor's Degree in Computer Science, Sep 2009 - May 2013
