

PROFESSIONAL SUMMARY

Senior **Site Reliability engineer** with 12+ years across SaaS, property technology, nonprofit platforms, civic technology, and IT services, specializing in **SRE practices, Kubernetes, AWS, observability, incident response, automation** for secure, scalable platforms; delivers **architecture** ownership, modernization, **performance** tuning, **test automation, CI/CD** discipline, and **production reliability** that improves customer workflows, **release quality**, and engineering velocity.

TECH SKILLS

- Cloud & Platform Engineering: **SRE practices, Kubernetes, AWS, observability, incident response, automation**, infrastructure-as-code, container orchestration, environment strategy, secure networking, capacity planning
- **CI/CD & Automation**: **GitHub Actions, Jenkins, Azure DevOps, GitLab CI, Docker** builds, Helm charts, deployment gates, rollback **automation**
- Operations & **Observability**: CloudWatch, **Azure Monitor, GCP Cloud Monitoring, Prometheus, Grafana, ELK/OpenSearch**, tracing, SLOs, **incident response**
- **Security** & Governance: IAM, OIDC, OAuth2, secrets management, policy-as-code, vulnerability scanning, audit trails, least-privilege access
- Engineering **Practices**: Reliability engineering, platform enablement, cost optimization, developer experience, migration planning, production readiness reviews

PROFESSIONAL EXPERIENCE

Staff Software Engineer

Relatio

Jun 2022 - Apr 2026

Las Vegas, NV

- Led platform and delivery improvements for a SaaS workflow environment using **SRE practices, Kubernetes, AWS, observability, incident response, automation**, improving deployment reliability by **28%** through standardized pipelines, environment checks, and rollback procedures.
- Built reusable infrastructure modules, container build patterns, and deployment templates that reduced configuration drift by **19%** across development, staging, and production systems.
- Modernized legacy deployment scripts into audited **CI/CD** workflows with secrets management, automated validation, image scanning, and staged promotion gates.
- Resolved recurring production **incidents** caused by unhealthy containers, missing alerts, slow database migrations, and inconsistent environment variables during release windows.
- Implemented **observability** dashboards for service health, **API latency**, queue depth, deployment status, and infrastructure capacity so teams could diagnose **incidents** faster.
- Improved cloud cost visibility by right-sizing compute workloads, tuning autoscaling thresholds, and removing unused resources without reducing platform reliability.
- Partnered with engineering teams to define production readiness reviews, runbooks, **incident response** expectations, and safe migration plans for critical services.
- Strengthened **security** posture through least-privilege access, OIDC-based deployment authentication, secret rotation, and policy checks in infrastructure workflows.
- Mentored developers on container troubleshooting, pipeline failures, monitoring signals, and operational ownership so product teams could support services confidently.

Senior Software Engineer

AppFolio

Feb 2018 - May 2022

Goleta, CA

- Improved property technology release workflows using earlier versions of **SRE practices, Kubernetes, AWS, observability, incident response, automation**, increasing deployment throughput by **24%** while reducing manual release coordination.
- Built CI jobs for test execution, artifact creation, database migration checks, and environment validation across payment, leasing, and notification services.
- Migrated older deployment steps into repeatable pipelines with clearer approvals, rollback instructions, and safer staging verification for **customer-facing** products.
- Fixed production issues involving stuck background jobs, failed health checks, missing log context, and slow service restarts by improving operational instrumentation.
- Optimized infrastructure monitoring around **API latency**, worker queues, database load, and error rates so **incident** responders had better context during support rotations.
- Collaborated with QA and product teams to align release windows, smoke tests, and customer-impact checks for high-volume property management workflows.
- Improved developer experience by documenting pipeline failures, environment setup, and deployment troubleshooting for backend and frontend engineers.
- Supported migration planning from older platform dependencies to stable runtime versions through regression testing, staged rollouts, and compatibility checks.

Software Engineer

Blackbaud

Jul 2016 - Jan 2018

Charleston, SC

- Supported nonprofit product operations with deployment **automation**, environment configuration, logging improvements, and release validation for donor management systems.
- Improved deployment quality by **21%** through stronger pre-release checks, monitoring dashboards, and rollback guidance for high-risk reporting and import workflows.

- Resolved release issues involving malformed configuration, missing secrets, slow database scripts, and incomplete worker restarts by adding safer operational checks.
- Created automated validation around data import, donation, and reporting flows so engineers could detect environment-specific failures before production releases.
- Worked with developers to improve structured logging, alert context, and **incident** notes for production issues affecting customer reporting and donor operations.
- Helped migrate fragile operational scripts into documented, repeatable **automation** with safer error handling and clearer ownership between teams.
- Participated in release reviews focused on maintainability, **security**, database **performance**, and production readiness as product scope expanded.

Software Developer

Granicus

May 2014 - Jun 2016

Dallas, TX

- Supported Linux-based deployments for civic technology portals, public records workflows, notification services, and document publishing systems used by government customers.
- Improved operational reliability through better job scheduling, retry handling, log collection, and deployment checklists for public meeting content processing.
- Fixed recurring production issues involving failed uploads, missing metadata, slow search **responses**, and unclear service errors by improving validation and indexing checks.
- Created integration tests and release notes for workflows that handled public records, meeting documents, and notification delivery before production deployment.
- Documented setup steps, troubleshooting commands, and backend release checks so new team members could support active government portals more safely.
- Worked with support teams to investigate customer **incidents**, reproduce backend errors, and deliver safe patches without disrupting public-sector sites.

Junior Software Developer

Vology

Jun 2013 - Apr 2014

Gainesville, FL

- Supported internal IT applications and Linux **automation** using shell scripts, Python utilities, **MySQL** maintenance tasks, and operational deployment checklists.
- Built small **automation** services for ticket routing, inventory updates, monitoring notifications, and internal reporting to reduce repetitive manual work.
- Fixed legacy scripts involving bad input handling, missing null checks, inconsistent database updates, and unclear failure messages by adding safer validation.
- Assisted senior engineers with infrastructure maintenance, backup checks, deployment preparation, and production troubleshooting across internal systems.
- Wrote technical notes, runbooks, and troubleshooting guides for operational utilities, helping the team maintain older systems with fewer support escalations.

SELECTED PROJECTS

- Cloud Platform Standardization: Built reusable infrastructure modules and deployment pipelines with **SRE practices, Kubernetes, AWS, observability, incident response, automation**, improving environment consistency, release traceability, and production recovery procedures across multiple teams.
- **Observability and Incident Response** Program: Implemented dashboards, alert rules, runbooks, and deployment health checks around **SRE practices, Kubernetes, AWS, observability, incident response, automation**, reducing diagnosis time and helping engineers resolve customer-impacting issues faster.

EDUCATION

Arkansas State University - Bachelor's Degree in Computer Science, Sep 2009 - May 2013
