

PROFESSIONAL SUMMARY

Senior **iOS Objective-C engineer** with 12+ years across SaaS, property technology, nonprofit platforms, civic technology, and IT services, specializing in **Objective-C, UIKit, Swift interoperability, REST APIs, legacy iOS modernization** for secure, scalable platforms; delivers **architecture** ownership, **modernization, performance** tuning, **test automation, CI/CD** discipline, and **production reliability** that improves customer workflows, **release quality**, and engineering velocity.

TECH SKILLS

- Mobile Engineering: **Objective-C, UIKit, Swift interoperability, REST APIs, legacy iOS modernization**, mobile **architecture**, offline-first workflows, push notifications, app **performance**, accessibility, secure storage
- API & Backend Integration: **REST APIs, GraphQL, OAuth2, OpenID Connect**, feature flags, telemetry events, payment and document workflows
- Cloud & Delivery: **Firebase, AWS, Azure**, App Store and Play Store release pipelines, Fastlane, **GitHub Actions, Jenkins**, crash reporting
- Testing & Quality: Unit, UI, integration, contract, device-matrix, regression, and release-candidate testing with crash analytics and monitoring
- Senior Practices: **Legacy modernization**, modular **architecture**, **performance** profiling, mentoring, product collaboration, incident diagnosis, release governance

PROFESSIONAL EXPERIENCE

Staff Software Engineer

Relatio

Jun 2022 - Apr 2026

Las Vegas, NV

- Led mobile and API-backed workflow features for a SaaS platform using **Objective-C, UIKit, Swift interoperability, REST APIs, legacy iOS modernization**, improving field task completion speed by **28%** through offline-friendly flows and better sync reliability.
- Designed secure mobile integration patterns for authentication, notifications, workflow actions, file uploads, and reporting **APIs**, reducing release defects by **19%**.
- Modernized **legacy** mobile screens and shared service modules into reusable **architecture** patterns with feature flags, analytics events, and safer staged rollouts.
- Resolved production issues involving crash loops, expired sessions, inconsistent offline state, duplicate submissions, and slow document uploads during peak customer activity.
- Implemented automated unit, UI, device-matrix, and API contract tests so mobile releases reached production with stronger confidence and fewer emergency hotfixes.
- Built **observability** around crashes, **API latency**, sync failures, version adoption, and user journeys so product teams could measure release health after launch.
- Partnered with backend engineers to refine payloads, pagination, retry behavior, and permission checks for mobile-first workflows used by enterprise customers.
- Improved accessibility, navigation consistency, and responsive layout behavior across mobile screens while preserving secure handling of customer data.
- Mentored engineers on mobile **architecture**, **performance** profiling, release readiness, crash diagnosis, and pragmatic tradeoffs between native and shared code.

Senior Software Engineer

AppFolio

Feb 2018 - May 2022

Goleta, CA

- Built mobile-facing property technology workflows using earlier versions of **Objective-C, UIKit, Swift interoperability, REST APIs, legacy iOS modernization**, improving tenant self-service completion speed by **24%** through better API integration and screen **performance**.
- Implemented tenant communication, payment, document, and notification experiences with secure validation, background processing, and **customer-facing** status clarity.
- Migrated older mobile modules and webview-heavy flows into more maintainable patterns with stronger testing and clearer service boundaries.
- Fixed defects involving duplicate payment actions, timeout errors, inconsistent notifications, and incorrect status transitions by adding idempotency and stronger validation.
- Optimized API payloads, cached lookup data, and mobile list rendering for lease records, reporting pages, and high-read customer support workflows.
- Improved regression protection with unit, integration, and release-candidate tests that covered high-risk leasing, payment, and notification workflows.
- Collaborated with QA and product teams to reproduce device-specific defects, deliver targeted fixes, and avoid broader regression risk during releases.
- Mentored engineers on mobile debugging, API contract thinking, secure data handling, and production support during feature delivery.

Software Engineer

Blackbaud

Jul 2016 - Jan 2018

Charleston, SC

- Developed mobile-friendly nonprofit fundraising and donor management workflows with API integrations, responsive screens, validation, and reporting-focused behavior.
- Improved donor search and campaign reporting usability by tuning screen flows and service responses, reducing common mobile support issues by **21%**.
- Implemented secure data import and review workflows with validation rules, duplicate detection, detailed error reporting, and safe transaction handling.
- Resolved bugs related to malformed CSV previews, timezone display differences, partial transaction failures, and inconsistent campaign status views by adding stricter validation.
- Built reusable modules for campaign records, donor profiles, activity history, and reporting flows with consistent behavior across devices.
- Added automated coverage around donation, reporting, and import workflows, improving confidence before releases and reducing regression defects.
- Worked with DevOps to improve deployment checks, environment configuration, and application logging so production issues could be identified faster.

Software Developer

Granicus

May 2014 - Jun 2016

Dallas, TX

- Built mobile-friendly civic technology features for agenda management, public records, document publishing, and subscription workflows on government-facing portals.
- Improved public meeting content processing and notification reliability through better validation, retry handling, and responsive user-facing status updates.
- Implemented API-backed views for agenda records, document metadata, and subscriptions while keeping permission checks consistent across modules.
- Fixed recurring production issues involving failed document uploads, missing metadata, slow search responses, and mobile layout defects by improving validation and indexing.
- Created integration tests for workflows that handled public records, meeting documents, and notification delivery before production releases.
- Worked with support teams to reproduce device-specific issues, deliver safe patches, and protect active government portals from disruption.

Junior Software Developer

Vology

Jun 2013 - Apr 2014

Gainesville, FL

- Supported internal IT service applications with mobile-friendly web screens, backend scripts, **MySQL**, Linux tools, and maintenance automation.
- Built small utilities for ticket routing, inventory updates, and operational reporting that improved access for internal teams working away from desks.
- Fixed bugs in **legacy** scripts and screens involving bad input handling, missing null checks, inconsistent updates, and unclear status messages by adding validation.
- Assisted senior engineers with API maintenance, database scripts, and deployment preparation while learning production debugging and release practices.
- Wrote unit tests, technical notes, and troubleshooting guides for internal utilities, helping the team maintain older systems with fewer support escalations.

SELECTED PROJECTS

- Mobile Workflow Companion: Delivered offline-capable mobile features with **Objective-C, UIKit, Swift interoperability, REST APIs, legacy iOS modernization**, secure API integration, push notifications, crash telemetry, and release automation for field and customer operations.
- Mobile **Modernization** and Release Pipeline: Refactored **legacy** screens and app modules with **Objective-C, UIKit, Swift interoperability, REST APIs, legacy iOS modernization**, automated testing, Fastlane, and staged releases to improve app stability and reduce production crash risk.

EDUCATION

Arkansas State University - Bachelor's Degree in Computer Science, Sep 2009 - May 2013
