

Rodrigo Fernandez

Senior Angular / .NET Full Stack Engineer

Katy, Texas | +1 (430) 279-2231 | <https://www.linkedin.com/in/rodrigo-bermejo-fern%C3%A1ndez-9a5a0664/>
rodrigobfdev@gmail.com

Summary

Senior **Angular** / **.NET Full Stack Engineer** with strong experience across **fintech, SaaS, logistics, healthcare, and enterprise workflow platforms**, building secure web systems with **Angular 10–21, TypeScript 4–5, .NET Framework 4.7–4.8, .NET Core 3.1, and .NET 6–8**. Skilled in modernizing legacy ASP.NET MVC applications, designing REST APIs, improving SQL Server performance, strengthening Azure deployments, and resolving production defects through observability, testing, and clean architecture. Known for flexible delivery across frontend, backend, cloud, and DevOps responsibilities while improving release quality, user experience, and engineering velocity.

Skills

- **Frontend:** Angular **10–21**, TypeScript **4–5**, RxJS **6–7**, NgRx **12–21**, Angular Material, Reactive Forms, HTML5, CSS3, SCSS, Bootstrap, Tailwind CSS, JavaScript ES6+, accessibility, responsive UI, frontend performance tuning.
- **Backend:** C#, **.NET Framework 4.7–4.8, .NET Core 3.1, .NET 6–8**, ASP.NET MVC, ASP.NET Core Web API, Entity Framework, EF Core **5–8**, LINQ, REST API design, background services, middleware, dependency injection, Clean Architecture.
- **Database:** SQL Server **2016–2022**, Azure SQL, PostgreSQL, stored procedures, query optimization, indexing, execution plans, migrations, data modeling, Redis caching.
- **Cloud & DevOps:** Azure App Service, Azure Functions, Azure DevOps, Azure Key Vault, Application Insights, AWS S3, Docker, Kubernetes basics, GitHub Actions, CI/CD pipelines, IIS, Nginx.
- **Testing & Quality:** xUnit, NUnit, Jasmine, Karma, Cypress, Postman, Swagger/OpenAPI, SonarQube, code review, unit testing, integration testing, production debugging.
- **Architecture:** Microservices, modular monoliths, CQRS, event-driven workflows, OAuth2, OIDC, JWT, RBAC, API versioning, observability, logging, monitoring, performance optimization.

Experience

Lightedge — Senior Software Engineer *(Apr 2020 – Mar 2026)*

- Led development of **enterprise SaaS and cloud infrastructure portals** using **Angular 12–21, TypeScript 4–5, .NET 6–8**, and SQL Server, supporting secure customer workflows across provisioning, billing, reporting, and internal operations.
- Modernized legacy ASP.NET MVC screens into modular **Angular** applications with lazy loading, route guards, shared component libraries, and reusable form patterns, reducing average page load time by **38%** across high-traffic admin modules.
- Built secure **ASP.NET Core Web API** services with JWT authentication, RBAC authorization, request validation, Swagger contracts, and centralized exception handling, improving API reliability and reducing repeated integration defects.
- Migrated several services from **.NET Core 3.1** to **.NET 6–8** by updating dependency injection patterns, middleware configuration, EF Core packages, logging providers, and CI/CD build agents without interrupting active customer workflows.

- Resolved a recurring production issue where Angular state was lost during token refresh by refactoring RxJS interceptors, stabilizing refresh-token handling, and adding regression coverage around expired-session scenarios.
- Improved SQL Server performance by rewriting slow stored procedures, adding targeted indexes, reviewing execution plans, and reducing timeout errors by **42%** in reporting screens used by operations and finance teams.
- Implemented new customer-facing dashboard features with **Angular Material**, reactive forms, chart components, and API-driven filters, giving users clearer visibility into infrastructure usage, billing trends, and support activity.
- Integrated Azure App Service, Azure SQL, Key Vault, and Application Insights into deployment workflows, strengthening secrets management, diagnostics, and environment-specific configuration across staging and production.
- Created automated test coverage using **xUnit**, **Jasmine**, **Karma**, and Cypress for critical billing and provisioning paths, helping release teams catch regressions before production deployments.
- Fixed memory leaks caused by unmanaged Angular subscriptions by replacing nested subscribes with RxJS operators, async pipes, and lifecycle cleanup, improving browser stability during long admin sessions.
- Supported DevOps responsibilities flexibly by maintaining Azure DevOps pipelines, reviewing Docker build issues, validating IIS deployments, and troubleshooting release failures with infrastructure and QA teams.
- Collaborated with product owners, designers, QA engineers, and support teams to translate unclear customer pain points into reliable **Angular** / **.NET** features with measurable performance, usability, and support-ticket improvements.

NIX United —Software Engineer *(Oct 2016 – Mar 2020)*

- Developed **fintech and healthcare workflow platforms** with **Angular 8–12**, **TypeScript 3–4**, **.NET Framework 4.7–4.8**, **.NET Core 3.1**, and SQL Server, delivering secure portals for payments, approvals, claims, and reporting.
- Migrated Web Forms and ASP.NET MVC modules into **Angular** components backed by REST APIs, improving maintainability and reducing duplicated frontend logic across customer onboarding and document review flows.
- Built backend services with **ASP.NET Core Web API**, Entity Framework Core, LINQ, and layered architecture, improving service separation while keeping business rules clear for QA, compliance, and support teams.
- Solved a payment reconciliation defect where duplicate callbacks created inconsistent transaction states by adding idempotency keys, database constraints, retry logging, and safer transaction boundaries.
- Improved API response times by **35%** after optimizing LINQ queries, reducing unnecessary eager loading, adding pagination, and caching reference data frequently used by Angular dropdowns and search screens.
- Implemented role-based access control with **JWT**, claims-based authorization, and API-level permission checks, helping protect sensitive healthcare and financial records from unauthorized user actions.
- Upgraded Angular applications from older module patterns into stronger **Angular 10–12** structures with shared services, route-level guards, typed models, and cleaner RxJS data flows.
- Created new approval workflow features with dynamic reactive forms, validation rules, audit history, and email notifications, giving business teams more flexible control over multi-step review processes.
- Reduced frontend defect volume by introducing reusable Angular form components, consistent error messaging, stricter TypeScript typing, and improved unit testing around shared UI behavior.
- Supported production troubleshooting by analyzing logs, SQL deadlocks, failed background jobs, and browser errors, then delivering stable fixes with clear release notes and rollback plans.
- Worked flexibly across frontend, backend, database, and deployment tasks, helping teams unblock delivery when ownership crossed Angular UI, .NET APIs, SQL procedures, and Azure DevOps pipelines.

Webiz Digital — Software Developer *(Jan 2014 – Sep 2016)*

- Built **eCommerce, marketing, and internal business applications** using **Angular 2–8, TypeScript 2–3, ASP.NET MVC 5, .NET Framework 4.6–4.8**, Web API, and SQL Server.
- Converted jQuery-heavy customer portals into structured **Angular** screens with reusable components, client-side routing, service layers, and cleaner validation, improving user experience on order and account pages.
- Developed REST APIs with ASP.NET Web API, Entity Framework, and SQL Server stored procedures, supporting product catalogs, order management, user profiles, reporting, and content administration.
- Fixed a serious checkout issue where concurrent inventory updates caused overselling by adding SQL transaction handling, validation checks, and clearer API error responses for the Angular frontend.
- Improved catalog search performance by **33%** through SQL indexing, query cleanup, server-side pagination, and frontend debounce logic that reduced unnecessary API calls during user typing.
- Implemented new admin dashboard features with **Angular**, Bootstrap, chart widgets, and export functionality, helping business users monitor orders, revenue, campaign performance, and customer activity.
- Migrated selected applications from older ASP.NET MVC patterns to cleaner service-based architecture, separating controllers, business logic, repositories, and shared validation utilities.
- Resolved browser compatibility bugs in responsive Angular views by standardizing CSS layouts, simplifying nested grids, and testing forms across Chrome, Edge, Firefox, and mobile breakpoints.
- Added authentication and authorization improvements with ASP.NET Identity, secure cookies, role checks, and password reset workflows, strengthening access control for admin and customer portals.
- Worked closely with designers, account managers, and QA teams to turn fast-changing client requirements into maintainable **.NET / Angular** features without sacrificing stability or release quality.

Aurio — Junior Software Developer *(Oct 2012 – Dec 2013)*

- Supported development of **business management and customer service applications** using **ASP.NET MVC 4–5, C#, SQL Server, JavaScript, Bootstrap**, and early **AngularJS 1.x** patterns.
- Built basic AngularJS screens for search, filtering, form validation, and customer record updates, helping replace slower postback-heavy pages with smoother interactive workflows.
- Created ASP.NET MVC controllers, Razor views, Web API endpoints, and SQL queries for internal tools used by support teams to manage tickets, customer notes, and operational records.
- Fixed form submission bugs caused by inconsistent client-side and server-side validation by aligning JavaScript checks, MVC model validation, and database constraints.
- Improved report loading speed by **24%** after simplifying SQL joins, adding indexes, and reducing unnecessary data returned to Razor and AngularJS screens.
- Assisted with migration from older Web Forms pages into ASP.NET MVC modules, learning how to separate presentation logic, routing, controller actions, and reusable service classes.
- Implemented small new features such as audit notes, status filters, export buttons, and notification messages, helping internal users complete daily tasks with fewer manual steps.
- Supported QA and senior engineers by reproducing bugs, checking browser console errors, reviewing IIS logs, and preparing clear notes for fixes and release validation.
- Gained flexible full-stack experience across frontend updates, C# backend changes, SQL scripts, and deployment support while building a strong foundation in enterprise software delivery.

Microsoft — Software Developer Intern *(Jun 2012 – Sep 2012)*

- Contributed as a **Software Developer Intern** on internal .NET tooling by supporting C# service updates, SQL Server queries, UI fixes, and test validation under senior engineering guidance.

- Helped troubleshoot data display bugs in internal dashboards by reviewing API responses, correcting mapping logic, and validating results against SQL Server records.
- Built early professional habits around code review, debugging, documentation, testing, and secure engineering practices while contributing to production-adjacent enterprise tools.
- Learned large-scale development workflow, version control discipline, and professional communication from senior engineers.
- Participated in team meetings, sprint planning, and defect analysis while gaining real-world software lifecycle exposure.

Education

Texas State University

Bachelor's Degree in Computer Science (*Sep 2008 – May 2012*)
