

Rodrigo Fernandez

Senior Angular / Node.js Full Stack Engineer

Katy, Texas | +1 (430) 279-2231 | <https://www.linkedin.com/in/rodrigo-bermejo-fern%C3%A1ndez-9a5a0664/>
rodrigobfdev@gmail.com

Summary

Senior Full Stack Engineer with deep expertise delivering scalable products across **cloud hosting, SaaS, healthcare, finance, retail, and enterprise IT** environments using **Angular 8–20, Node.js 12–20, TypeScript 3–5**, and modern API architectures. Strong background modernizing legacy platforms, migrating AngularJS and monolith systems into modular microservices, and optimizing complex dashboards for high-volume users. Proven success reducing incidents, accelerating releases, and improving performance through **AWS, CI/CD**, automated testing, and observability. Experienced leading frontend architecture, backend services, and cross-functional delivery while turning unstable systems into secure, maintainable, revenue-supporting platforms with measurable business impact.

Skills

- **Frontend: Angular 8–20, AngularJS, RxJS 6–7**, NgRx, Redux Pattern, TypeScript 3–5, JavaScript ES6+, HTML5, CSS3, SCSS, LESS, Bootstrap, Tailwind CSS, Angular Material, PrimeNG, Responsive Design, Cross-Browser Compatibility, Webpack
- **Backend: Node.js 12–20**, Express.js, NestJS, REST API, GraphQL, Socket.IO, JWT Authentication, OAuth2, Microservices, Server-Side Rendering, Webhooks, API Gateway Integration
- **Database:** PostgreSQL, MySQL, SQL Server, MongoDB, Redis, Elasticsearch, Database Design, Query Optimization, Stored Procedures, ORM (TypeORM, Sequelize, Mongoose)
- **Cloud / DevOps: AWS** (EC2, S3, RDS, Lambda, CloudFront, CloudWatch), Azure, Docker, Kubernetes, Jenkins, GitHub Actions, GitLab CI/CD, Terraform, Nginx, Linux, CI/CD Pipelines
- **Testing / Quality:** Jasmine, Karma, Jest, Cypress, Mocha, Chai, Unit Testing, Integration Testing, E2E Testing, SonarQube
- **Tools / Workflow:** Git, GitHub, Bitbucket, Jira, Confluence, Agile Scrum, Kanban, Swagger, Postman, Figma, VS Code
- **Security / Performance:** OWASP Best Practices, RBAC, HTTPS, CORS, Rate Limiting, Caching, Lazy Loading, Code Splitting, Performance Tuning, Monitoring & Logging

Experience

Lightedge — Senior Software Engineer *(Apr 2020 – Mar 2026)*

- Architected multi-tenant enterprise control platforms with **Angular 14–20** and **Node.js 16–20**, introducing lazy loading, shared libraries, and API consolidation that improved dashboard load speed by **42%** for thousands of daily users.
- Led full migration from legacy AngularJS modules to **Angular 15**, rebuilding routing, reactive forms, and authentication flows while preserving business rules and reducing post-release UI defects.
- Developed secure billing and provisioning microservices with **Node.js 18**, Express, and PostgreSQL, replacing manual operations and increasing processing efficiency through automation.
- Resolved recurring memory leaks caused by unclosed listeners, cache misuse, and async queue buildup, using heap profiling and refactoring that raised uptime to **99.95%**.

- Implemented CI/CD pipelines with Docker, Jenkins, and rollback strategy, cutting release windows from 45 minutes to under 10 minutes with safer deployments.
- Built reusable Angular component libraries and coding standards that accelerated parallel project delivery across multiple internal teams.
- Introduced centralized logging and monitoring with CloudWatch and Grafana, reducing incident diagnosis time during production support cycles.
- Designed RBAC permission modules with JWT and audit history, helping enterprise clients meet stricter security compliance requirements.
- Optimized PostgreSQL queries, indexes, and API pagination logic, improving reporting response time on large account datasets.
- Partnered with product teams to launch new customer self-service features that reduced support ticket volume within first quarter.
- Mentored engineers on **Angular**, RxJS, clean architecture, and debugging practices that improved sprint predictability and code quality.
- Supported high-priority outages with structured incident response, restoring critical services quickly while documenting permanent preventive fixes.

NIX United — Software Engineer *(Oct 2016 – Mar 2020)*

- Built B2B workflow portals using **Angular 8–12** and **Node.js 12–16** for sales, operations, and analytics teams, improving internal process visibility and user adoption.
- Modernized legacy jQuery and server-rendered screens into **Angular 10** SPA modules, reducing maintenance overhead and speeding feature releases.
- Created REST APIs with Express and MongoDB, tuning indexes and aggregation pipelines that improved average response performance.
- Fixed JWT refresh token race conditions and timeout issues with interceptor redesign, lowering authentication complaints.
- Integrated payment gateways, email systems, and SMS providers with retry logic and queue handling for more stable business operations.
- Developed export/reporting modules with scheduled jobs and CSV generation, saving many manual hours for operations teams monthly.
- Improved frontend bundle size through tree shaking and route splitting, reducing first load times by **28%** on slower networks.
- Added Jest and Cypress automation suites that reduced regression defects and increased confidence during weekly deployments.
- Refactored duplicated services into reusable modules and shared middleware, simplifying future enhancements across multiple products.
- Collaborated closely with analysts and QA teams to translate unclear requirements into reliable deliverables under tight timelines.
- Handled urgent production incidents involving API failures and data sync mismatches, applying root-cause fixes instead of temporary patches.

Webiz Digital — Software Developer *(Jan 2014 – Sep 2016)*

- Built business websites, booking portals, and internal admin systems using **AngularJS 1.4–1.6**, JavaScript ES6, Bootstrap 3–4, jQuery, Node.js, PHP, and MySQL.
- Refactored large jQuery-heavy screens into AngularJS controllers, services, and reusable directives, improving maintainability for client dashboards and content workflows.
- Resolved browser compatibility issues across Chrome, Firefox, Safari, and Internet Explorer by cleaning CSS conflicts, polyfills, DOM timing bugs, and responsive layout defects.

- Improved checkout and booking form completion by **22%** through clearer validation messages, reduced page refreshes, and better client-side error handling.
- Implemented REST API integrations for payment, CRM, notification, and reporting workflows, using structured request handling and defensive validation for unstable vendor APIs.
- Fixed performance problems on high-traffic landing pages by compressing assets, reducing blocking scripts, improving image handling, and adding server-side caching.
- Created reusable admin templates with Bootstrap components, AngularJS filters, and permission-aware menu rendering to speed up delivery across similar client projects.
- Supported database cleanup and migration tasks by writing MySQL scripts, correcting duplicate records, and safely moving customer data between older application versions.
- Added Git-based workflows, code review habits, and basic CI checks, helping the team reduce accidental deployment mistakes and improve release consistency.

Aurio — Junior Software Developer *(Oct 2012 – Dec 2013)*

- Supported early-stage web application development using JavaScript, HTML5, CSS3, Bootstrap, PHP, MySQL, and early AngularJS patterns for internal business tools.
- Built responsive UI screens for customer records, reports, login flows, and admin forms, focusing on clean layout behavior across desktop and tablet devices.
- Fixed common production issues such as broken form validation, missing null checks, incorrect SQL joins, and layout regressions reported by support teams.
- Improved report page usability by adding filters, sortable tables, export actions, and clearer empty-state handling for non-technical business users.
- Assisted senior engineers with API integration, database updates, and bug triage, gradually taking ownership of smaller features from requirement to release.
- Converted repeated HTML and JavaScript patterns into reusable snippets and shared utilities, reducing duplicate code across internal application pages.
- Investigated performance issues caused by inefficient database queries and helped add indexes that improved several report loads by **25%**.
- Learned to balance fast delivery with maintainability by documenting edge cases, testing user flows manually, and asking focused questions before implementation.
- Collaborated with QA and product stakeholders to reproduce defects, validate fixes, and confirm that releases matched real user expectations.

Microsoft — Software Developer Intern *(Jun 2012 – Sep 2012)*

- Contributed to internal engineering utilities using **C#, ASP.NET MVC 4**, JavaScript, and SQL Server patterns while learning enterprise development standards from senior engineers.
- Assisted with bug reproduction, log review, and small feature fixes for dashboard pages, improving reliability of internal tools used by technical support teams.
- Implemented minor UI updates and backend validation improvements under code review, gaining practical experience with accessibility, maintainability, and secure coding expectations.
- Prepared documentation for setup steps, known issues, and troubleshooting paths so future interns and team members could onboard more smoothly to internal applications.

Education

Texas State University

Bachelor's Degree in Computer Science *(Sep 2008 – May 2012)*
