

Rodrigo Fernandez

Senior React Native / Mobile Full Stack Engineer

Katy, Texas | +1 (430) 279-2231 | <https://www.linkedin.com/in/rodrigo-bermejo-fern%C3%A1ndez-9a5a0664/>
rodrigobfdev@gmail.com

Summary

Senior React Native / Mobile Full Stack Engineer with 10+ years building healthcare, fintech, SaaS, eCommerce, and cloud-service products using **React Native 0.63–0.73**, **React 16–18**, **TypeScript 4.x–5.x**, **Node.js 14–20**, **Expo SDK 44–50**, and **Firebase 8–10** in one flexible mobile and web delivery stack. Specialized in iOS/Android performance tuning, offline-first architecture, API integration, CI/CD release automation, native module debugging, payment and notification flows, and version migrations that improved crash-free sessions, startup speed, release reliability, and user retention across production mobile applications used by distributed enterprise customers.

Skills

- **Mobile: React Native 0.63–0.73, Expo SDK 44–50**, iOS, Android, Hermes, Flipper, Native Modules, Deep Linking, Push Notifications, App Store, Google Play
- **Frontend: React 16–18, TypeScript 4.x–5.x**, JavaScript ES6+, Next.js 12–14, Redux Toolkit 1.8–2.x, React Query 3–5, React Navigation 5–6
- **Backend: Node.js 14–20**, Express.js 4.x, NestJS 8–10, REST APIs, GraphQL, WebSocket, Firebase Functions, Authentication, OAuth2, JWT
- **Database & Cloud: PostgreSQL 11–15**, MongoDB 4–6, Firebase 8–10, Firestore, AWS S3, Lambda, CloudWatch, API Gateway, Docker, Redis
- **Testing & DevOps: Jest 26–29**, React Native Testing Library, Detox, GitHub Actions, Bitrise, Fastlane, Sentry, Firebase Crashlytics, CI/CD pipelines
- **Mobile Features: Offline sync**, biometric login, payments, QR scanning, geolocation, camera upload, in-app notifications, analytics, role-based access

Experience

Lightedge — Senior Software Engineer *(Apr 2020 – Mar 2026)*

- Led **React Native 0.68–0.73** mobile development for cloud-service customer portals, improving crash-free sessions by **31%** through Hermes tuning, Sentry tracing, and safer native dependency upgrades.
- Migrated legacy mobile screens from class-based React patterns into **React 18** hooks and **TypeScript 4.x–5.x**, reducing production UI regression tickets by **28%** across account, billing, and support workflows.
- Resolved Android release failures caused by Gradle dependency conflicts, old Firebase packages, and mismatched target SDK settings, stabilizing Play Store builds by **35%**.
- Implemented secure **biometric authentication**, token refresh, and role-based navigation using React Navigation 6, improving login completion by **22%** for enterprise mobile users.
- Built offline-first incident and support-ticket flows with local caching, retry queues, and API reconciliation, reducing failed mobile submissions by **41%** during unstable network conditions.
- Optimized slow dashboard rendering by replacing heavy nested state updates with memoized selectors and paginated API loading, improving first interactive time by **26%**.
- Integrated **Firebase Cloud Messaging 9.x–10.x** with segmented notification preferences, solving duplicate push delivery issues and increasing support-response engagement by **18%**.

- Created shared UI components across mobile and web using **React Native**, **React**, and TypeScript contracts, reducing duplicate feature work by **24%** across two product teams.
- Fixed iOS memory leaks caused by retained listeners in navigation and upload modules, improving long-session stability and reducing Crashlytics memory warnings by **30%**.
- Modernized CI/CD release automation with **Fastlane**, GitHub Actions, environment signing profiles, and automated build validation, cutting manual release time by **45%**.
- Partnered with backend teams on **Node.js 18–20** API changes for billing and service inventory modules, using flexible mobile API adapters to avoid blocking app releases.
- Improved production observability by adding Sentry breadcrumbs, Crashlytics custom keys, and CloudWatch correlation IDs, helping resolve high-priority mobile incidents **40%** faster.

NIX United — Software Engineer *(Oct 2016 – Mar 2020)*

- Developed production mobile applications with **React Native 0.57–0.62**, **React 16.x**, and **TypeScript 3.x**, supporting healthcare, logistics, and marketplace clients with reusable cross-platform architecture.
- Migrated older JavaScript mobile screens into **TypeScript 3.x** with stricter models, reducing undefined-state runtime bugs by **32%** across appointment, order, and customer profile workflows.
- Resolved Android build failures caused by Gradle version conflicts, outdated native modules, and Firebase dependency mismatches, improving release stability by **29%**.
- Implemented **React Navigation 4.x–5.x** flows for authentication, onboarding, tab navigation, and deep links, removing several back-button and session-routing issues.
- Built offline-friendly form submission with local persistence, retry queues, and API reconciliation, reducing failed mobile submissions by **26%** during weak network conditions.
- Optimized FlatList rendering, image loading, and screen-level memoization, improving scroll performance by **34%** on lower-end Android devices.
- Integrated **Firebase Cloud Messaging 6.x–7.x** and notification preferences, fixing duplicate delivery bugs and improving user re-engagement by **17%**.
- Created reusable mobile UI components for forms, modals, cards, upload widgets, and validation messages, reducing repeated feature implementation by **21%**.
- Fixed payment-status race conditions by coordinating mobile polling logic with backend API responses, reducing duplicate payment support tickets by **19%**.
- Added **Jest 24–26** and React Native Testing Library coverage for core flows, increasing regression protection by **38%** before client release cycles.
- Supported backend integration with **Node.js 10–14**, Express.js, PostgreSQL, and REST APIs, using flexible full-stack debugging when mobile issues required server-side fixes.

Webiz Digital — Software Developer *(Jan 2014 – Sep 2016)*

- Built hybrid mobile and responsive web features using **Ionic 1.x**, **Cordova 5–6**, **AngularJS 1.x**, focusing on eCommerce and service-booking platforms.
- Converted several mobile browser workflows into Cordova-based app screens with camera, geolocation, and file-upload support, improving mobile task completion by **18%**.
- Resolved device-specific Android layout issues caused by viewport sizing, keyboard overlap, and inconsistent WebView behavior, improving checkout reliability by **23%**.
- Implemented product catalog, cart, checkout, and order-tracking flows with REST APIs and token-based sessions, reducing abandoned mobile sessions by **16%**.
- Migrated callback-heavy JavaScript API handling into cleaner promise-based service modules, improving maintainability and reducing duplicated request logic by **30%**.
- Integrated **Firebase 3.x** analytics and crash reporting patterns where suitable, helping teams identify failed screens and reduce unresolved mobile issues by **22%**.

- Built reusable UI patterns for forms, modals, buttons, filters, and validation states, improving delivery speed across repeated client mobile pages.
- Fixed image-upload failures by adding compression, retry handling, and progress feedback, reducing customer complaints around failed submissions by **25%**.
- Collaborated with QA to reproduce mobile defects on real Android devices, browser emulators, and WebView builds, making bug reports clearer and faster to resolve.
- Supported early React adoption with **React 15.x** for interactive dashboard sections, while keeping the production mobile stack aligned with widely used tools of that period.

Aurio — Junior Software Developer *(Oct 2012 – Dec 2013)*

- Supported mobile-ready web application development using **JavaScript ES5**, **jQuery 1.x–2.x**, **Bootstrap 2.x–3.x**, **HTML5**, **CSS3**, and **REST API** integration.
- Built responsive customer-facing screens and admin modules for service and content-management workflows, improving update speed by **20%** through reusable UI sections.
- Fixed form-validation, session-timeout, and browser-compatibility issues that caused incomplete submissions, improving successful request completion by **18%**.
- Created **AJAX-based API** integrations for user profiles, login states, notifications, and content loading, strengthening practical frontend-to-backend debugging skills.
- Improved mobile browser usability by resolving touch-target spacing, viewport scaling, and layout-break issues across common Android and iOS browsers.
- Assisted senior engineers with database validation, API testing, and production hotfix checks, building flexible support across frontend and backend tasks.
- Refactored repeated jQuery logic into cleaner utility functions, reducing duplicated frontend scripts and making future maintenance easier for the team.
- Prepared release notes, reproduced QA defects, and verified hotfix behavior across staging and production-like environments, reducing reopened bugs by **15%**.
- Built a strong foundation in responsive design, REST communication, and mobile usability patterns before moving into larger **React Native** production ownership.

Microsoft — Software Developer Intern *(Jun 2012 – Sep 2012)*

- Supported internal engineering tools using **C#**, **.NET Framework 4.0–4.5**, **ASP.NET MVC 3–4**, **JavaScript**, **jQuery**, and **SQL Server**, gaining practical experience in enterprise software quality and structured development workflows.
- Assisted senior engineers with debugging UI defects, validation issues, and data-handling problems, documenting root causes clearly so fixes could be reviewed and released with lower regression risk.
- Built small internal web modules for tracking records, reviewing status changes, and improving team visibility, applying clean **HTML**, **CSS**, **JavaScript**, and backend integration patterns.
- Resolved early-stage bugs related to inconsistent form validation and SQL query results by reproducing issues locally, checking logs, and working with mentors to apply safer input-handling rules.

Education

Texas State University

Bachelor's Degree in Computer Science *(Sep 2008 – May 2012)*
