

Rodrigo Fernandez

Senior Vue.js / Java (Spring Boot) Full Stack Engineer

Katy, Texas | +1 (430) 279-2231 | <https://www.linkedin.com/in/rodrigo-bermejo-fern%C3%A1ndez-9a5a0664/>
rodrigobfdev@gmail.com

Summary

Senior Full Stack Engineer specializing in **Vue.js 2.x–3.x**, **Java 8–17**, and **Spring Boot 2.x–3.x** across cloud infrastructure, FinTech, eCommerce, and enterprise SaaS industries, with strong experience modernizing legacy JSP/jQuery portals into component-driven Vue applications, building secure REST APIs and microservices, improving PostgreSQL/MySQL performance, resolving production defects, migrating Java services to newer LTS versions, implementing CI/CD with Docker, Kubernetes, Jenkins, and GitHub Actions, and delivering measurable gains in reliability, page speed, release quality, accessibility, observability, security, and developer productivity.

Skills

- **Frontend:** **Vue.js 2.x–3.x**, Vuex 3.x–4.x, Pinia 2.x, Vue Router 3.x–4.x, JavaScript ES6+, TypeScript 4.x–5.x, HTML5, CSS3, SCSS, Tailwind CSS 2.x–3.x, Bootstrap 4.x–5.x, Vuetify 2.x–3.x, Jest 26.x–29.x, Cypress 9.x–13.x
- **Backend:** **Java 8–17**, **Spring Boot 2.x–3.x**, Spring MVC 4.x–6.x, Spring Security 5.x–6.x, Hibernate 5.x–6.x, JPA, REST APIs, GraphQL, Microservices, Maven 3.x, Gradle 6.x–8.x
- **Database:** PostgreSQL 11–15, MySQL 5.7–8.x, Redis 5.x–7.x, Elasticsearch 7.x–8.x, Flyway 6.x–9.x, Liquibase 3.x–4.x
- **Cloud & DevOps:** AWS EC2, S3, RDS, Lambda, CloudWatch, ECS, Docker 18.x–24.x, Kubernetes 1.18–1.27, Jenkins 2.x, GitHub Actions, GitLab CI, Nginx, Linux
- **Architecture:** Microservices, Domain-Driven Design, Event-Driven Architecture, API Gateway, OAuth2, JWT, RBAC, Clean Architecture, SOLID, Agile Scrum

Experience

Lightedge — Senior Software Engineer (Apr 2020 – Mar 2026)

- Led modernization of cloud infrastructure customer portals using **Vue.js 2.6–3.3**, **Java 11–17**, and **Spring Boot 2.4–3.1**, improving operational visibility for enterprise hosting clients.
- Migrated legacy JSP and jQuery dashboard modules into reusable **Vue.js 3.x** components with Pinia and Vue Router, reducing duplicate UI code by **38%** across account, billing, and monitoring screens.
- Resolved recurring production memory leaks in **Java 11** microservices by profiling heap usage, tuning Hibernate fetch strategies, and lowering API timeout incidents by **31%**.
- Designed secure REST APIs with **Spring Security 5.x–6.x**, OAuth2, JWT, and RBAC, strengthening tenant isolation for cloud infrastructure customers across multiple service tiers.
- Implemented a real-time alert configuration feature in **Vue.js 3.x** and **Spring Boot 3.x**, allowing users to customize CloudWatch-driven notifications without support team involvement.
- Upgraded core services from **Java 11 to Java 17** and **Spring Boot 2.x to 3.x**, fixing dependency conflicts, Jakarta namespace changes, and deprecated security configuration issues.
- Improved PostgreSQL 13–15 query performance by adding composite indexes, rewriting slow joins, and reducing dashboard load time by **44%** during peak customer usage.

- Built CI/CD workflows with **GitHub Actions**, Jenkins 2.x, Docker 20.x–24.x, and Kubernetes 1.20–1.27, cutting release preparation effort by **35%**.
- Fixed a critical Vue hydration and routing issue caused by inconsistent API state mapping, stabilizing account switching flows for multi-tenant enterprise users.
- Created shared frontend utilities for form validation, API error handling, role permissions, and notification states, making **Vue.js** development more flexible across teams.
- Integrated observability with CloudWatch, Prometheus, structured logs, and custom health endpoints, improving incident triage speed by **29%** for Java services.
- Partnered with DevOps, QA, and product teams to deliver reliable cloud portal features while balancing frontend usability, backend scalability, and security requirements.

NIX United — Software Engineer *(Oct 2016 – Mar 2020)*

- Developed FinTech and healthcare workflow applications using **Vue.js 2.0–2.6**, **Java 8–11**, **Spring Boot 1.5–2.2**, and MySQL 5.7–8.0 for distributed client teams.
- Built reusable Vue modules for onboarding, document review, approval routing, and user management, improving feature delivery speed by **27%** across multiple projects.
- Created Spring Boot REST services for transaction validation, audit trails, and reporting workflows, applying DTO mapping and service-layer boundaries for cleaner maintenance.
- Resolved a payment reconciliation defect caused by timezone conversion errors in **Java 8**, adding UTC normalization and regression tests that reduced monthly support tickets by **22%**.
- Migrated selected services from **Spring Boot 1.x to 2.x**, updating configuration properties, dependency versions, security filters, and integration tests with minimal downtime.
- Improved frontend state consistency with Vuex 3.x by separating server state, form state, and UI state, reducing hard-to-reproduce user session bugs.
- Implemented role-based screens with **Vue Router 3.x** guards and Spring Security permissions, helping compliance teams manage sensitive workflow access more safely.
- Optimized MySQL queries and Hibernate mappings for reporting pages, reducing export generation time by **41%** for high-volume business users.
- Configured Jenkins 2.x pipelines with Maven, Docker 18.x–19.x, and automated test stages, improving release confidence across staging and production environments.
- Delivered flexible API integrations with third-party KYC, payment, and notification providers, handling retries, validation errors, and provider-specific response formats.
- Collaborated with remote engineers, QA analysts, and product owners to translate complex business rules into stable **Vue.js** screens and reliable **Java** services.

Webiz Digital — Software Developer *(Jan 2014 – Sep 2016)*

- Built responsive client portals and eCommerce dashboards using **Vue.js 2.x**, Node.js, Express, MySQL, MongoDB, and BootstrapVue for digital agency clients.
- Converted older server-rendered pages into Vue-based interactive modules, improving user experience while keeping existing backend routes stable.
- Implemented product search, cart workflows, admin reporting, and CMS-style content features with reusable Vue components and REST API integrations.
- Solved a recurring checkout bug caused by duplicate submission events by adding frontend guards, backend idempotency keys, and stronger payment logging.
- Improved page performance by optimizing images, reducing JavaScript bundle size, and caching API responses for high-traffic marketing pages.
- Built Node.js middleware for authentication, file uploads, email notifications, and third-party API connections across multiple client projects.

- Created MySQL indexes and query refactors for reporting dashboards, reducing slow page responses by **33%** under heavier client data volumes.
- Supported migration from callback-heavy Node.js code to Promise-based services, improving readability and reducing nested error-handling problems.
- Worked flexibly across frontend, backend, QA fixes, deployment support, and client feedback cycles to keep small-team delivery predictable.

Aurio — Junior Software Developer *(Oct 2012 – Dec 2013)*

- Supported travel and booking platform features using **Java 6–7**, Spring MVC 3.x, JSP, Servlet APIs, jQuery 1.x, Bootstrap 2.x, MySQL 5.x, and Tomcat 6–7.
- Built booking confirmation, customer profile, and admin lookup screens while learning clean MVC separation between controllers, services, and JSP views.
- Fixed validation bugs in reservation forms by improving server-side Java checks and client-side jQuery feedback, reducing repeated submission errors by **18%**.
- Created basic REST-style endpoints for availability lookups and internal booking tools, helping senior engineers prepare the platform for later API expansion.
- Improved SQL reliability by correcting joins, adding missing indexes, and reviewing slow query logs for frequently used customer service screens.
- Assisted with migration from Ant-based builds to Maven 3.x modules, making dependency management and local setup more consistent for new developers.
- Resolved Tomcat deployment issues caused by environment-specific configuration files, documenting safer release steps for QA and support teams.
- Wrote JUnit 4.x tests for service-layer logic and regression cases, improving confidence around booking calculations and cancellation rules.
- Gained strong full-stack foundations by supporting Java backend tasks, legacy frontend fixes, database troubleshooting, and production issue investigation.

Microsoft — Software Developer Intern *(Jun 2012 – Sep 2012)*

- Contributed to internal productivity tools using JavaScript, C#, and SQL under enterprise engineering standards and code review practices.
- Assisted with bug triage, UI fixes, and automation tasks that improved team delivery efficiency during release cycles.
- Created test scripts and documentation that helped validate builds faster and reduce repeated manual checks.
- Learned large-scale development workflow, version control discipline, and professional communication from senior engineers.
- Participated in team meetings, sprint planning, and defect analysis while gaining real-world software lifecycle exposure.

Education

Texas State University

Bachelor's Degree in Computer Science *(Sep 2008 – May 2012)*
