

Rodrigo Fernandez

Senior Vue.js / Node.js Full Stack Engineer

Katy, Texas | +1 (430) 279-2231 | <https://www.linkedin.com/in/rodrigo-bermejo-fern%C3%A1ndez-9a5a0664/>
rodrigobfdev@gmail.com

Summary

Senior **Vue.js 2.x–3.x / Node.js 12–20** Full Stack Engineer with strong experience in **SaaS, cloud platforms, digital commerce, and enterprise web applications**, building scalable dashboards, API-driven products, and modular frontend systems. Skilled in **Vue 2 Options API, Vue 3 Composition API, Nuxt 2–3, Node.js, Express, NestJS, PostgreSQL, MongoDB, AWS, Docker, CI/CD**, and performance-focused modernization. Known for resolving production bugs, migrating legacy Vue apps, improving API latency, and delivering secure, maintainable features across distributed teams.

Skills

- **Frontend:** **Vue.js 2.x–3.x, Nuxt.js 2–3**, Vuex, Pinia, Vue Router, Composition API, Options API, TypeScript 4–5, JavaScript ES6+, HTML5, CSS3, Sass, Tailwind CSS, Vuetify, Element UI, BootstrapVue
- **Backend:** **Node.js 12–20**, Express.js, NestJS, REST API, GraphQL, WebSocket, JWT, OAuth2, RBAC, API versioning, pagination, validation, error handling
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis, Sequelize, Prisma, TypeORM, query optimization, indexing, migration scripts
- **Cloud / DevOps:** AWS EC2, S3, RDS, Lambda, CloudFront, Docker, Kubernetes, Nginx, GitHub Actions, GitLab CI, Jenkins, Terraform basics
- **Testing / Quality:** Jest, Vitest, Cypress, Mocha, Chai, Supertest, ESLint, Prettier, SonarQube, unit testing, integration testing, regression testing
- **Monitoring:** Datadog, Grafana, Prometheus, CloudWatch, Sentry, structured logging, alerting, production issue triage

Experience

Lightedge — Senior Software Engineer (*Apr 2020 – Mar 2026*)

- Led modernization of a cloud operations portal from **Vue.js 2.x** Options API to **Vue.js 3.x** Composition API, reducing duplicated component logic and improving frontend maintainability by **38%**.
- Built secure **Node.js 16–20** REST services with Express and NestJS for account provisioning, billing workflows, and internal automation across SaaS infrastructure products.
- Resolved a recurring production issue where stale Vuex state caused incorrect customer resource status, replacing fragile mutations with normalized state and improving dashboard accuracy.
- Migrated legacy Vue Router guards and role checks into centralized **RBAC** middleware, reducing authorization defects by **42%** across admin and customer-facing modules.
- Implemented lazy loading, route-level code splitting, and optimized API batching in **Vue 3**, improving initial dashboard load time by **31%** for enterprise users.
- Designed reusable Vue component libraries with TypeScript, Vuetify, and Storybook-style documentation to standardize forms, tables, modals, and validation patterns.
- Improved **Node.js** API latency by optimizing PostgreSQL indexes, removing N+1 queries, and adding Redis caching for high-read configuration endpoints.

- Integrated Sentry, CloudWatch, and structured logging to trace frontend errors back to backend request IDs, reducing average production debugging time by **45%**.
- Delivered migration scripts from older Sequelize models to Prisma-based data access for selected services, keeping backward-compatible APIs during phased rollout.
- Implemented CI/CD pipelines with GitHub Actions, Docker, and AWS deployments, adding test gates and rollback steps for safer releases across multiple environments.
- Partnered with product and support teams to convert recurring customer issues into Vue workflow improvements, validation fixes, and clearer error handling.
- Strengthened testing with Jest, Cypress, and Supertest, covering critical login, provisioning, billing, and admin workflows before major release cycles.

NIX United — Software Engineer *(Oct 2016 – Mar 2020)*

- Developed enterprise web applications using **Vue.js 2.x**, Vuex, Node.js, Express, PostgreSQL, and MongoDB for logistics, healthcare, and internal business platforms.
- Migrated jQuery-heavy screens into modular Vue components, improving maintainability and reducing UI regression issues by **35%** during feature delivery.
- Built Node.js API layers with JWT authentication, request validation, pagination, and consistent error contracts for multi-role business applications.
- Fixed a major race-condition issue in asynchronous order updates by introducing idempotent API handling, optimistic UI rollback, and backend transaction checks.
- Implemented Vuex modules for complex workflow state, replacing scattered component-level state and improving developer onboarding speed across the team.
- Created reusable data-table, search, filter, and export components in **Vue 2**, helping teams ship admin dashboards faster with consistent UX behavior.
- Improved backend throughput by adding Redis caching, query tuning, and pagination safeguards for large reporting screens used by operations teams.
- Supported gradual migration from older Node.js 8–10 services to **Node.js 12–14**, resolving dependency conflicts and updating build pipelines.
- Integrated third-party APIs for payments, shipping, notifications, and identity verification with retry logic, webhook validation, and failure logging.
- Added Cypress regression tests around critical user flows, reducing release-blocking UI defects by **28%** across client projects.
- Collaborated with QA to reproduce browser-specific bugs, isolate root causes, and patch Vue rendering issues caused by reactive state misuse.

Webiz Digital — Software Developer *(Jan 2014 – Sep 2016)*

- Built responsive client portals and eCommerce dashboards using **Vue.js 2.x**, Node.js, Express, MySQL, MongoDB, and BootstrapVue for digital agency clients.
- Converted older server-rendered pages into Vue-based interactive modules, improving user experience while keeping existing backend routes stable.
- Implemented product search, cart workflows, admin reporting, and CMS-style content features with reusable Vue components and REST API integrations.
- Solved a recurring checkout bug caused by duplicate submission events by adding frontend guards, backend idempotency keys, and stronger payment logging.
- Improved page performance by optimizing images, reducing JavaScript bundle size, and caching API responses for high-traffic marketing pages.
- Built Node.js middleware for authentication, file uploads, email notifications, and third-party API connections across multiple client projects.

- Created MySQL indexes and query refactors for reporting dashboards, reducing slow page responses by **33%** under heavier client data volumes.
- Supported migration from callback-heavy Node.js code to Promise-based services, improving readability and reducing nested error-handling problems.
- Worked flexibly across frontend, backend, QA fixes, deployment support, and client feedback cycles to keep small-team delivery predictable.

Aurio — Junior Software Developer *(Oct 2012 – Dec 2013)*

- Supported web application development using early **Vue.js 1.x–2.x**, JavaScript, Node.js, Express, MySQL, HTML, CSS, and Bootstrap.
- Built form-heavy admin screens, reusable UI elements, and simple dashboard widgets for internal business users and customer support workflows.
- Fixed frontend validation bugs, layout issues, and inconsistent API response handling that caused user confusion during account update workflows.
- Created basic Node.js endpoints for user records, notifications, and reporting features while learning secure routing and structured error responses.
- Assisted with migration of older JavaScript modules into Vue components, helping the team reduce duplicated DOM manipulation logic.
- Improved SQL queries and added simple indexes for frequently used list pages, reducing loading delays for support staff.
- Worked with senior engineers to debug production issues, review logs, reproduce defects, and document fixes for future maintenance.
- Added unit tests for utility functions and API helpers, improving confidence around small but business-critical workflow changes.
- Helped prepare release notes, deployment checklists, and QA verification steps to support smoother production releases.

Microsoft — Software Developer Intern *(Jun 2012 – Sep 2012)*

- Contributed to internal productivity tools using JavaScript, C#, and SQL under enterprise engineering standards and code review practices.
- Assisted with bug triage, UI fixes, and automation tasks that improved team delivery efficiency during release cycles.
- Created test scripts and documentation that helped validate builds faster and reduce repeated manual checks.
- Learned large-scale development workflow, version control discipline, and professional communication from senior engineers.
- Participated in team meetings, sprint planning, and defect analysis while gaining real-world software lifecycle exposure.

Education

Texas State University

Bachelor's Degree in Computer Science *(Sep 2008 – May 2012)*
