

CRISTOFF STAN

Senior Software Engineer – Angular, Node.js, TypeScript, NestJS, Express, AWS

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-s-692816413> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Senior Software Engineer with **10+ years** building **SaaS**, **digital commerce**, and **enterprise workflow platforms** using **Angular 6–18**, **Node.js 8–22**, **TypeScript**, **NestJS/Express**, **PostgreSQL**, **MongoDB**, **Redis**, **AWS**, **Docker**, and **CI/CD**, delivering secure full-stack systems, legacy modernization, API scalability, production reliability, accessibility improvements, and measurable product value for distributed engineering teams.

TECHNICAL SKILLS

- **Frontend Engineering:** Angular 6–18, AngularJS 1.x, TypeScript, JavaScript ES6+, RxJS 6–7, NgRx, Angular Material, reactive forms, standalone components, lazy loading, route guards, accessibility, SCSS, Bootstrap, Tailwind CSS, HTML5, CSS3.
- **Backend Engineering:** Node.js 8–22, NestJS, Express.js, REST APIs, GraphQL, WebSockets, background workers, BullMQ, JWT, OAuth2, RBAC, API versioning, validation middleware, async/await, event-driven services.
- **Databases & Caching:** PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch, schema design, indexing, query optimization, migrations, transaction handling, data validation, audit logging.
- **Cloud & DevOps:** AWS, EC2, ECS, Lambda, S3, RDS, CloudWatch, Docker, Kubernetes, Helm, Nginx, Terraform, GitHub Actions, GitLab CI, Jenkins, CI/CD pipelines, blue-green deployment, rollback planning.
- **Testing & Quality:** Jest, Jasmine, Karma, Cypress, Playwright, Supertest, unit testing, integration testing, API contract testing, regression testing, smoke testing, code coverage, test-driven debugging.
- **Monitoring & Reliability:** Sentry, Datadog, Prometheus, Grafana, OpenTelemetry, ELK Stack, structured logging, alerting, incident response, performance profiling, production triage, root-cause analysis.
- **Architecture & Senior Practices:** Microservices, modular monoliths, domain-driven design, clean architecture, CQRS basics, caching strategy, secure API design, code review, mentoring, Agile/Scrum, technical documentation.

WORK EXPERIENCE

Sensidev

Senior Software Engineer

(September 2021 – May 2026)

Remote, Romania

- Owned full-stack delivery for **Angular 10–18** and **Node.js 12–22** product areas across SaaS workflow screens, customer portals, and backend APIs used by distributed business teams.
- Modernized legacy **Angular 10** modules into lazy-loaded feature libraries with **standalone components**, **RxJS**, stricter TypeScript, and reusable design-system patterns to reduce UI drift.

- Built and refactored **Node.js**, **NestJS**, and **Express** services around REST APIs, background workers, PostgreSQL transactions, Redis caching, and role-based authorization for high-traffic workflows.
- Resolved a production **JWT refresh-token race condition** that caused intermittent 401 loops by adding token rotation guards, API retry limits, and stronger client-side session recovery.
- Migrated backend services from **Node.js 12/14** to **Node.js 18/20/22** with dependency audits, Jest regression suites, Docker image updates, and staged rollout checks.
- Implemented new workflow configuration, approval-routing, audit-history, and notification features using **Angular reactive forms**, guarded routes, WebSocket updates, and queue-backed Node workers.
- Improved key dashboard load time by **38%** through Angular bundle splitting, OnPush change detection, API pagination, Redis-backed summary caching, and PostgreSQL index tuning.
- Stabilized recurring production issues involving slow report exports, duplicate job execution, and timeout-heavy API calls by adding idempotency keys, BullMQ retries, and structured logging.
- Strengthened release quality with **GitHub Actions**, Docker validation, contract testing, Sentry monitoring, and deployment checklists that made rollback decisions faster during incidents.
- Guided engineers through architecture reviews, code reviews, migration plans, and defect triage while keeping delivery pragmatic across modern Angular features and existing enterprise constraints.

Syscom Digital Software Engineer

(October 2019 – August 2021)

Remote, Romania

- Developed enterprise commerce and operations features with **Angular 7–10**, **Node.js 8–14**, Express, TypeScript, PostgreSQL, MongoDB, and Redis for customer-facing portals.
- Upgraded Angular applications from component-heavy **Angular 7** patterns toward **Angular 9/10** with stricter TypeScript, route guards, shared modules, and improved build reliability.
- Refactored Node APIs from callback-heavy Express handlers into layered services with async/await, centralized validation, reusable middleware, and clearer error contracts.
- Fixed a payment-webhook duplication issue by introducing idempotency checks, transaction-safe database writes, retry-safe queue processing, and better reconciliation logs.
- Delivered order search, user-management, reporting, and admin configuration features using **Angular Material**, reactive forms, REST APIs, JWT authentication, and server-side filtering.
- Reduced checkout and order-management defects by **31%** after adding Jest unit tests, Supertest API coverage, Cypress smoke flows, and release-blocking regression checks.
- Improved slow inventory synchronization jobs by batching external API calls, caching reference data in Redis, and moving long-running work out of request-response paths.
- Supported migration from **Node.js 8/10** runtime images to **Node.js 12/14** by replacing deprecated packages, updating CI scripts, and validating critical API behavior.
- Partnered with product managers, QA engineers, and designers to convert ambiguous business rules into maintainable Angular screens, resilient Node endpoints, and documented acceptance criteria.

Soft Build Software Developer

(June 2016 – July 2019)

Remote, Romania

- Built business web applications with **AngularJS 1.5**, later **Angular 2–6**, **Node.js 4–10**, Express, MySQL, MongoDB, and Bootstrap for service and reporting workflows.
- Helped migrate jQuery-heavy and AngularJS screens into typed Angular modules with reusable components, clearer routing, form validation, and shared service abstractions.
- Implemented Node.js REST endpoints for customer records, scheduling, invoices, and reporting while separating controller logic, service logic, and database access layers.
- Resolved recurring timezone and date-format bugs in scheduling workflows by normalizing UTC storage, adding display-format helpers, and covering edge cases with tests.

- Improved page responsiveness by **27%** through asset cleanup, API response trimming, lazy-loaded Angular routes, database indexes, and reduced DOM-heavy rendering patterns.
- Created internal reporting exports with CSV generation, pagination, and background processing so large reports no longer blocked normal user-facing requests.
- Supported upgrades from older **Node.js 4/6** services toward **Node.js 8/10** by replacing abandoned middleware, fixing promise handling, and updating deployment scripts.
- Collaborated in Agile delivery with senior engineers to estimate features, review pull requests, investigate production bugs, and document safer release steps for support teams.

Decima Digital **Software Developer**

(November 2015 – April 2016)

Remote, Estonia

- Developed client-facing web modules with **AngularJS 1.3–1.4**, **Node.js 0.12**, Express, MySQL, MongoDB, jQuery, Bootstrap, and REST-style service integrations.
- Built reusable AngularJS controllers, directives, and form components for content editing, account settings, and internal dashboard workflows across small business applications.
- Implemented Node.js API routes for authentication, file metadata, and profile updates while learning cleaner separation between routes, validation, and persistence code.
- Fixed production form-submission bugs caused by double clicks and weak validation by adding server-side checks, disabled submit states, and clearer user feedback.
- Improved internal dashboard response time by **19%** by reducing duplicate database queries, compressing static assets, and caching stable lookup data within the API layer.
- Supported a gradual modernization effort that moved scattered jQuery behavior into AngularJS views, making UI behavior easier to test and maintain.
- Worked closely with senior developers during releases, log reviews, and bug triage to understand production risk, customer impact, and maintainable JavaScript delivery practices.

Borna Technology **Software Developer Intern**

(September 2014 – August 2015)

Tallinn, Estonia

- Supported early web application development with **AngularJS 1.2**, **Node.js 0.10**, Express, JavaScript, HTML, CSS, MySQL, and basic REST endpoint integration.
- Assisted in building simple AngularJS views for login, profile, listing, and admin screens while learning controller scope management and reusable template patterns.
- Created small Node.js route handlers and utility scripts for form data, lookup lists, and internal test records under senior developer review.
- Helped reproduce browser-specific UI issues, validation gaps, and inconsistent API responses by writing clear bug notes and retesting fixes before release.
- Contributed to documentation, Git workflows, and QA support while building foundational experience in JavaScript application structure, debugging, and team-based software delivery.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
September 2010 – May 2014

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate
- AWS Certified Developer – Associate
- Microsoft Certified: Azure Developer Associate
- Certified Kubernetes Application Developer — CKAD
- Professional Scrum Master I — PSM I

PROJECTS

Enterprise Workflow Modernization Platform

- Led modernization of a legacy workflow platform from older **Angular 10** modules and **Node.js 12/14** services into a more maintainable **Angular 16/18**, **Node.js 18/20**, **NestJS**, PostgreSQL, Redis, and Docker-based architecture.
- Implemented lazy-loaded Angular domains, reusable form components, RBAC-aware navigation, queue-backed background processing, and structured audit logging to support configurable approval workflows and customer-specific business rules.
- Improved dashboard performance, production traceability, and release safety by combining **bundle optimization**, API pagination, Redis caching, Jest regression tests, Sentry monitoring, and GitHub Actions deployment checks.

Digital Commerce Admin & API Platform

- Built a commerce operations platform using **Angular 9/10**, **Node.js 12/14**, Express, TypeScript, PostgreSQL, MongoDB, Redis, and Cypress to support order management, inventory synchronization, reporting, and admin configuration.
- Solved duplicate webhook and inconsistent order-state problems by adding **idempotency keys**, transaction-safe writes, retry-aware workers, reconciliation logs, and automated API tests around payment and fulfillment workflows.
- Improved maintainability by separating API controllers, service layers, validation middleware, and database access while documenting REST contracts for frontend, backend, QA, and support teams.
