

CRISTOFF STAN

Senior Software Engineer – React, Node.js, TypeScript, AWS/GCP

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-s-692816413> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Senior Software Engineer with 10+ years building **B2B SaaS, e-commerce, and enterprise web platforms** using **React 16.8–18.x, Node.js 12–20, TypeScript 4–5, Express/NestJS, PostgreSQL**, and **AWS/GCP**; delivers scalable front-end systems, secure APIs, cloud-native services, modernization roadmaps, and measurable product value through resilient architecture, performance tuning, CI/CD, and senior engineering leadership.

TECHNICAL SKILLS

- **Frontend Engineering:** **React 16.8–18.x**, TypeScript 4–5, JavaScript ES6+, Next.js 12–14, Redux Toolkit, React Query, Zustand, HTML5, CSS3, Tailwind CSS, Material UI, responsive UI architecture, accessibility, design systems.
- **Backend Engineering:** **Node.js 12–20**, Express.js, NestJS, REST APIs, GraphQL, WebSockets, JWT/OAuth2, RBAC, background jobs, API versioning, service-layer architecture, microservices, monolith modernization.
- **Cloud & DevOps:** **AWS** Lambda, ECS, S3, CloudFront, RDS, SQS, SNS, API Gateway, CloudWatch, IAM; **GCP** Cloud Run, Cloud Storage, Cloud SQL, Cloud Build; Docker, Kubernetes basics, Terraform, GitHub Actions, GitLab CI, Jenkins.
- **Databases & Messaging:** PostgreSQL, MySQL, MongoDB, Redis, DynamoDB, Elasticsearch/OpenSearch, Prisma, TypeORM, Sequelize, Mongoose, SQL optimization, indexing, caching, event-driven workflows.
- **Testing & Quality:** Jest, React Testing Library, Cypress, Playwright, Supertest, Mocha, Chai, Postman, contract testing, integration testing, E2E testing, code review, static analysis, SonarQube.
- **Monitoring & Engineering Practices:** OpenTelemetry, Datadog, New Relic, Sentry, Grafana, Prometheus, structured logging, CI/CD governance, Agile/Scrum, mentoring, architecture reviews, production incident response.

WORK EXPERIENCE

Sensidev

Senior Software Engineer

(September 2021 – May 2026)

Remote, Romania

- Architected customer-facing **React 16.8–18.x** and **Node.js 14–20** applications for B2B SaaS workflows, aligning reusable UI modules, API contracts, and release standards across several product teams.
- Modernized legacy class-based React screens into **function components, hooks, Redux Toolkit, and React Query**, reducing duplicated state handling and improving front-end delivery speed by **32%**.
- Built secure **Express.js** and **NestJS** services with **TypeScript**, PostgreSQL, Redis, and JWT/OAuth2 flows, supporting role-based access, tenant-aware permissions, and audit-friendly business operations.

- Resolved production memory leaks caused by unbounded Node.js listeners and inefficient cache invalidation, adding heap profiling, Redis TTL rules, and safer background worker shutdown behavior.
- Led migration work from older Node.js 14 services toward **Node.js 18/20**, replacing deprecated packages, updating CI images, and validating breaking changes through Jest, Supertest, and staged rollout checks.
- Improved API performance by refactoring slow PostgreSQL joins, adding composite indexes, and moving repeated aggregation logic into optimized service queries with measurable latency reduction.
- Designed reusable **React component libraries** with TypeScript generics, Storybook documentation, accessibility rules, and design-token patterns that kept complex product screens consistent across releases.
- Implemented event-driven features using **AWS SQS**, Lambda, and PostgreSQL outbox patterns, preventing duplicate notification processing during retries and improving reliability in distributed workflows.
- Strengthened CI/CD pipelines with **GitHub Actions, Docker, Terraform, and AWS/GCP deployment checks**, adding automated linting, tests, image scans, and environment-specific release approvals.
- Mentored mid-level engineers through architecture reviews, pull-request feedback, debugging sessions, and production-readiness reviews that improved code quality and reduced avoidable release defects.

Syscom Digital Software Engineer

(October 2019 – August 2021)

Remote, Romania

- Developed responsive **React 16.x** dashboards and **Node.js 10–14** APIs for digital commerce and internal operations platforms, balancing rapid feature delivery with maintainable service boundaries.
- Implemented order, payment, and customer-support workflows using **Express.js**, PostgreSQL, Redis, and third-party REST integrations, improving transaction visibility and reducing manual reconciliation effort.
- Reduced recurring checkout and webhook failures by **27%** by introducing idempotency keys, retry-safe handlers, request correlation IDs, and clearer error logging around payment provider callbacks.
- Migrated several JavaScript modules into **TypeScript 3.x/4.x**, defining DTOs, shared validation utilities, and safer API response contracts that prevented common runtime data-shape errors.
- Fixed React rendering bottlenecks caused by large table re-renders, memoization gaps, and inefficient selector usage, improving perceived performance on admin-heavy customer management screens.
- Created reusable API middleware for authentication, validation, rate limiting, and structured error responses, making backend behavior more consistent across multiple product modules.
- Supported migration of legacy jQuery widgets into React components, preserving business behavior while introducing controlled forms, component-level tests, and clearer state ownership.
- Built CI checks with **Jenkins and GitLab CI**, adding automated unit tests, Docker image builds, and staged deployment scripts for development, QA, and production environments.
- Collaborated closely with product owners, QA engineers, and designers during sprint planning and release validation, translating ambiguous requirements into clear technical tasks and acceptance criteria.

Soft Build Software Developer

(June 2016 – July 2019)

Remote, Romania

- Built full-stack web features with **React 15–16, Node.js 6–10**, Express.js, MySQL, MongoDB, and Redis for e-commerce, booking, and business administration applications.
- Improved page-load performance by **38%** by replacing heavy jQuery interactions with React components, compressing static assets, optimizing API payloads, and adding browser caching rules.
- Developed REST APIs for inventory, appointment, reporting, and customer-management modules, using service-layer patterns to separate business logic from routing and persistence concerns.

- Resolved production issues involving duplicated form submissions, stale inventory counts, and inconsistent session handling by adding validation guards, transactional updates, and clearer error recovery flows.
- Migrated callback-heavy Node.js code toward Promise-based modules and async patterns where supported, improving readability and reducing nested error-handling problems in backend services.
- Created reusable React form components, modal flows, and dashboard widgets that helped teams deliver similar business screens without rebuilding validation and layout behavior repeatedly.
- Added Jest and Mocha tests around pricing calculations, authentication middleware, and critical API endpoints, increasing confidence before releases and reducing regression risk.
- Worked with senior engineers on database indexing, slow-query analysis, deployment scripts, and code reviews, gaining strong production discipline across both frontend and backend systems.

Decima Digital

Software Developer

(November 2015 – April 2016)

Remote, Estonia

- Delivered JavaScript and Node.js features for content-driven business websites, supporting reusable page templates, admin workflows, and REST-style data access patterns.
- Maintained legacy front-end screens built with HTML, CSS, jQuery, and early component-based JavaScript patterns while helping evaluate React adoption for more interactive modules.
- Built small Express.js services for form submissions, notification routing, and basic content APIs, improving separation between front-end behavior and backend processing logic.
- Fixed production defects involving broken form validation, inconsistent file uploads, and missing error messages by improving server-side checks and clearer client-side feedback.
- Supported database updates in MySQL and MongoDB-backed applications, writing safer queries, improving data cleanup scripts, and validating changes before release.
- Participated in deployment preparation, browser testing, and regression checks, helping reduce last-minute release issues across small client-facing web projects.
- Collaborated with designers and project managers to convert business requirements into responsive pages, admin tools, and maintainable JavaScript functionality.

Borna Technology

Software Developer Intern

(September 2014 – August 2015)

Tallinn, Estonia

- Assisted senior developers with JavaScript, HTML, CSS, Node.js, and Express.js tasks across internal tools, client websites, and basic API-driven web applications.
 - Built small UI enhancements, reusable page sections, and validation scripts while learning practical debugging, browser compatibility handling, and clean Git workflow habits.
 - Supported backend tasks for simple REST endpoints, form handlers, and database-backed admin pages using Node.js, Express.js, MySQL, and MongoDB.
 - Helped investigate defects involving layout issues, incorrect form data, and inconsistent API responses by reproducing bugs and documenting clear steps for senior engineers.
 - Contributed to QA checks, deployment notes, and code reviews, gaining a strong foundation in professional software delivery, teamwork, and production support discipline.
-

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
September 2010 – May 2014

CERTIFICATIONS

- **AWS Certified Solutions Architect – Associate**
- **AWS Certified Developer – Associate**
- **MongoDB Certified Developer Associate**
- **Certified Kubernetes Application Developer (CKAD)**
- **Professional Scrum Developer I (PSD I)**

PROJECTS

Cloud-Native Commerce Operations Platform

- Designed and delivered a **React, Node.js, TypeScript, PostgreSQL, Redis, and AWS** platform for order management, customer support, payments, and reporting, including secure REST APIs, reusable admin dashboards, event-based notifications, and production monitoring with structured logs and Sentry.

React Modernization and API Reliability Program

- Led modernization of legacy JavaScript and jQuery-heavy workflows into **React 18**, Redux Toolkit, React Query, and TypeScript while refactoring Node.js APIs for idempotent processing, stronger validation, better observability, and safer CI/CD deployment across staging and production.
