

CRISTOFF STAN

Senior Software Engineer – Vue.js | Node.js | TypeScript | AWS

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-s-692816413> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Senior Software Engineer with 11+ years building SaaS, eCommerce, digital operations, and enterprise workflow platforms using **Vue 2.x–3.x**, **Node.js 10.x–20.x**, **Express/NestJS**, **TypeScript**, **PostgreSQL**, **MongoDB**, and **AWS**, delivering scalable APIs, maintainable front-end systems, modernization work, production reliability, and measurable product value across distributed engineering teams.

TECHNICAL SKILLS

- **Frontend Engineering:** **Vue.js 2.x–3.x**, Vue Composition API, Options API, Vue Router, Vuex, Pinia, Vite, Webpack, JavaScript ES6+, **TypeScript 3.x–5.x**, HTML5, CSS3, SCSS, Tailwind CSS, Bootstrap, responsive UI development.
- **Backend Engineering:** **Node.js 10.x–20.x**, Express.js, NestJS, REST APIs, GraphQL basics, JWT authentication, OAuth2 flows, RBAC, service-layer architecture, background jobs, queue-based processing, webhook handling, API versioning.
- **Databases & Caching:** **PostgreSQL**, MySQL, MongoDB, Redis, SQL query optimization, indexing, schema design, migrations, transactions, data validation, connection pooling, audit logging.
- **Cloud & DevOps:** **AWS ECS**, Lambda, S3, RDS, CloudWatch, IAM, Docker, Docker Compose, GitHub Actions, Jenkins, CI/CD pipelines, environment configuration, staged releases, deployment troubleshooting.
- **Testing & Quality:** Jest, Vitest, Cypress, Mocha, Chai, Supertest, unit testing, integration testing, API contract testing, regression testing, code review, static analysis, production incident review.
- **Architecture & Senior Practices:** Modular monoliths, microservice-ready APIs, clean architecture, domain-oriented services, reusable component libraries, performance tuning, observability, secure coding, mentoring, Agile/Scrum delivery.
- **Legacy & Migration Skills:** Legacy JavaScript modernization, **Vue 2 to Vue 3** migration, **Node.js runtime upgrades**, jQuery replacement, Webpack-to-Vite transitions, Express middleware cleanup, database migration support.

WORK EXPERIENCE

Sensidev

Senior Software Engineer

(September 2021 – May 2026)

Remote, Romania

- Led development of a **Vue 3.x**, **TypeScript 4.x/5.x**, and **Node.js 14.x–20.x** platform for customer workflows, balancing new product delivery with modernization of older **Vue 2.6** modules.
- Designed **REST APIs** and event-aware backend services with **Node.js**, **Express**, **NestJS**, **PostgreSQL**, and **Redis**, improving service boundaries and reducing duplicate business logic across teams.

- Modernized legacy front-end screens from option-heavy **Vue 2.6** components into cleaner **Vue 3 Composition API** modules, improving page maintainability and reducing regression risk during release cycles.
- Resolved production checkout and account-update failures caused by duplicate webhook retries, missing idempotency keys, and race conditions in asynchronous **Node.js** service handlers.
- Improved API response time by **37%** by optimizing slow **PostgreSQL** joins, adding targeted indexes, caching high-read endpoints with **Redis**, and removing repeated serialization work.
- Implemented secure authentication flows with **JWT**, refresh-token rotation, role-based route guards, and audit logging, strengthening access control for admin and customer-facing workflows.
- Built CI/CD pipelines with **GitHub Actions**, **Docker**, and **AWS ECS**, adding linting, unit tests, integration checks, image scanning, and staged deployment approvals for safer releases.
- Refactored large shared UI components into reusable design-system patterns with **Pinia**, **Vite**, and typed API clients, improving developer productivity across multiple product squads.
- Investigated memory leaks in long-running **Node.js** workers by reviewing heap snapshots, stream handling, and queue retry behavior, then stabilized background processing under heavier load.
- Mentored engineers through code reviews, architecture reviews, incident follow-ups, and testing standards, helping the team ship higher-quality features without slowing delivery velocity.

Syscom Digital Software Engineer

(October 2019 – August 2021)

Remote, Romania

- Delivered enterprise dashboards and workflow tools using **Vue 2.x**, **Node.js 10.x/12.x**, **Express 4**, **TypeScript**, and **MongoDB**, supporting internal operations and customer service teams.
- Created reusable API modules for user management, reporting, notifications, and permissions, reducing repeated controller logic and improving consistency across **Node.js** services.
- Improved feature delivery speed by **29%** by standardizing **Vuex** state modules, shared form validation, reusable table components, and API contract documentation for cross-functional teams.
- Fixed intermittent production errors caused by malformed payloads, expired tokens, and unhandled promise rejections, adding stronger validation and centralized error handling in **Express** middleware.
- Migrated selected JavaScript modules toward **TypeScript 3.x** patterns, introducing typed interfaces for API responses, safer service calls, and clearer component contracts.
- Optimized slow dashboard pages by reducing oversized API responses, paginating server-side queries, and moving expensive filtering logic from the browser into indexed backend queries.
- Implemented new customer onboarding features with dynamic forms, file uploads, status tracking, and admin review screens using **Vue 2.x**, **Node.js**, and **MongoDB**.
- Supported deployment improvements with **Docker**, **Jenkins**, and environment-specific configuration, helping separate development, staging, and production release behavior.
- Collaborated with product owners, QA engineers, and backend developers to translate vague business requests into maintainable user stories, testable acceptance criteria, and stable releases.

Soft Build Software Developer

(June 2016 – July 2019)

Remote, Romania

- Built commercial web applications using **JavaScript**, **Vue 2.x**, **Node.js 6.x/8.x**, **Express 4**, **MySQL**, and **REST APIs** as the company moved from server-rendered pages to richer front-end workflows.
- Improved page-load performance by **34%** by replacing duplicated jQuery behaviors with reusable **Vue 2.x** components, compressing assets, and reducing unnecessary database-backed requests.
- Developed backend endpoints for catalog, order, user-profile, and notification workflows with **Node.js** and **Express**, keeping API behavior predictable for front-end and mobile consumers.

- Resolved order-status mismatch bugs caused by inconsistent timezone conversion, partial payment callbacks, and missing transaction rollback handling in service-layer code.
- Introduced structured logging, request validation, and integration test coverage around high-risk checkout and account workflows, improving defect visibility before production releases.
- Migrated legacy build scripts and manually copied assets toward **Webpack**-based packaging, making front-end releases more repeatable and less dependent on individual developer machines.
- Implemented new admin features for search, filtering, CSV export, and role-based access, giving business teams faster access to operational data without direct database requests.
- Worked flexibly across **Vue**, plain **JavaScript**, **Node.js**, **SQL**, **HTML**, **CSS**, and **QA** support, helping small teams deliver reliable features with limited specialization.

Decima Digital **Software Developer**

(November 2015 – April 2016)

Remote, Estonia

- Contributed to eCommerce and marketing websites using **JavaScript**, **Node.js 0.12**, **Express 4**, **HTML5**, **CSS3**, and **MySQL**, focusing on practical features and stable client delivery.
- Built early backend utilities for contact forms, content updates, email notifications, and lightweight admin tools, giving nontechnical users faster control over daily website operations.
- Improved form reliability by adding server-side validation, clearer error messages, retry-safe email handling, and better logging for failed submissions and malformed requests.
- Supported migration of static pages into reusable templates and partials, reducing duplicated markup and making small content updates safer for client-facing sites.
- Investigated browser-specific layout bugs, broken image paths, and inconsistent script loading, then applied fixes that improved user experience across older desktop browsers.
- Worked with designers and project managers to convert visual requirements into responsive pages, reusable UI fragments, and maintainable front-end behavior.
- Maintained version-controlled delivery practices with **Git**, code reviews, and deployment checklists, helping the team reduce accidental overwrites during frequent client updates.

Borna Technology **Software Developer Intern**

(September 2014 – August 2015)

Tallinn, Estonia

- Supported senior developers on internal web applications using **JavaScript**, **jQuery**, **Node.js 0.10**, **Express 3**, **HTML**, **CSS**, and basic relational database queries.
 - Implemented small UI enhancements, form behaviors, validation messages, and layout fixes while learning production coding standards and practical web application maintenance.
 - Assisted with debugging broken AJAX requests, inconsistent browser behavior, missing assets, and simple server-side routing issues under guidance from experienced engineers.
 - Created basic documentation for setup steps, reusable snippets, and test accounts, making onboarding easier for other interns and junior contributors joining the project.
 - Participated in sprint planning, QA checks, and release preparation, gaining early experience with **Git**, issue tracking, peer review, and customer-focused software delivery.
-
-

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
September 2010 – May 2014

CERTIFICATIONS

- **AWS Certified Developer – Associate**
- **MongoDB Associate Developer Certification**
- **OpenJS Node.js Application Developer Certification**
- **Certified Kubernetes Application Developer — CKAD**

PROJECTS

Customer Workflow Platform Modernization — Vue 3, Node.js, PostgreSQL, AWS

- Modernized a legacy customer workflow platform by migrating high-traffic **Vue 2.6** screens to **Vue 3 Composition API**, introducing typed API clients, improving reusable component patterns, and upgrading backend services from older **Node.js 14.x** runtime patterns toward more maintainable **Node.js 18.x/20.x** services.
- Added centralized error handling, idempotent webhook processing, Redis-backed caching, PostgreSQL index tuning, and CI/CD checks through **GitHub Actions** and **Docker**, improving performance, release safety, and production supportability for customer-facing workflows.

Enterprise Operations Dashboard — Vue 2, Node.js, Express, MongoDB

- Built a configurable operations dashboard with **Vue 2.x**, **Vuex**, **Node.js**, **Express**, and **MongoDB**, supporting dynamic filters, role-based views, file uploads, admin review queues, and reporting workflows for business users.
- Improved reliability by adding request validation, API pagination, centralized error middleware, reusable form components, and integration tests around high-risk workflows such as onboarding, status changes, and notification delivery.
