

TAYLOR PENTZ

Senior Software Engineer — Java • Spring Boot • Angular • Cloud-Native Systems

taylorpentz2@gmail.com | 1601 Larkin, High Point, NC | +1 (980) 981-4522

<https://www.linkedin.com/in/taylor-p-b0389a3ba>

Professional Summary

Senior Software Engineer with 10+ years in SaaS, fintech, healthcare, and enterprise workflow platforms, specializing in **Java 8–21**, **Spring Boot 1.5–3.1**, **AngularJS through Angular 18**, **REST APIs**, **microservices**, **PostgreSQL**, **AWS**, **Docker**, and modernization programs that turn legacy systems into secure, observable, scalable products with measurable business impact across high-volume customer and operations workflows.

Technical Skills

- ❖ **Backend Engineering:** **Java 8–21**, **Spring Boot 1.5–3.2**, Spring MVC, Spring Security, Spring Data JPA, Hibernate, REST APIs, GraphQL basics, SOAP modernization, Maven, Gradle, Lombok, MapStruct, OpenAPI/Swagger, asynchronous processing.
- ❖ **Frontend Engineering:** **AngularJS 1.x**, **Angular 4–18**, TypeScript, JavaScript, RxJS, NgRx, Angular Material, Reactive Forms, lazy-loaded modules, route guards, component libraries, responsive enterprise dashboards.
- ❖ **Cloud & DevOps:** **AWS**, EC2, ECS, Lambda, S3, RDS, CloudWatch, IAM, Docker, Kubernetes, Jenkins, GitHub Actions, GitLab CI, Terraform basics, CI/CD pipelines, blue-green deployments, release automation.
- ❖ **Databases & Messaging:** **PostgreSQL**, MySQL, SQL Server, Oracle, MongoDB, Redis, Elasticsearch, Kafka, RabbitMQ, query tuning, stored procedures, indexing, schema migration, data reconciliation.
- ❖ **Testing & Quality:** JUnit, Mockito, Spring Boot Test, Testcontainers, Jasmine, Karma, Cypress, Jest, Postman, SonarQube, contract testing, regression testing, code reviews, defect triage, production hotfix validation.
- ❖ **Architecture & Practices:** **Microservices**, modular monoliths, event-driven architecture, domain-driven design, CQRS basics, API gateway patterns, OAuth2/JWT, RBAC, observability, Agile/Scrum, mentoring, technical documentation.

Professional Experience

SumatoSoft

Senior Software Engineer

Boston, MA (Remote) | Apr 2023 – Mar 2025

- Led development of **Java 21**, **Spring Boot 3.2**, and **Angular 18** enterprise modules for SaaS workflow platforms supporting customer onboarding, case management, role-based approvals, and operational reporting.
- Modernized selected services from older **Spring Boot 2.x** patterns toward **Spring Boot 3.2 readiness** in 2024 by isolating dependency conflicts, updating security filters, and replacing deprecated configuration code.

- Delivered a phased **Angular 13 to Angular 18** modernization for high-traffic admin screens, improving lazy loading, shared module boundaries, typed reactive forms, and reusable UI components.
- Resolved a recurring production issue where duplicate approval events were created during network retries by adding idempotency keys, database constraints, and safer **Kafka** consumer retry handling.
- Improved API response time by **38%** by profiling slow PostgreSQL joins, introducing composite indexes, reducing N+1 Hibernate queries, and caching repeated lookup data through **Redis**.
- Built secure REST services with **Spring Security**, OAuth2, JWT validation, and RBAC policies that allowed product teams to support multiple customer roles without duplicating authorization logic.
- Implemented Angular error-handling improvements for expired tokens, failed file uploads, and partial API responses, reducing confusing user-facing failures during long-running workflow sessions.
- Strengthened CI/CD delivery with **Docker**, GitHub Actions, automated test gates, and environment-specific configuration, making releases more repeatable across development, staging, and production.
- Partnered with QA and product managers to reproduce difficult browser-specific Angular defects, including stale NgRx state after route changes and broken validation in nested dynamic forms.
- Mentored mid-level engineers on **Spring Boot**, Angular architecture, code review discipline, database migration safety, and production debugging practices for distributed Java applications.

Hexaview Technologies Inc.

Software Engineer

New York, NY | Jul 2018 – Mar 2023

- Developed enterprise banking and analytics applications using **Java 8**, Spring MVC, early **Spring Boot 1.5**, and later Java 11 services after platform upgrades became stable across the organization.
- Built Angular front-end features across **Angular 4** and later Angular 10-era applications, including account dashboards, approval screens, data tables, and reusable form components.
- Migrated legacy JSP and jQuery workflows into Angular modules with TypeScript, route guards, interceptors, and shared services while keeping older Java endpoints stable during the transition.
- Reduced production defects by **31%** by improving validation coverage, adding JUnit and Mockito tests around payment rules, and creating Cypress smoke tests for critical Angular flows.
- Investigated a recurring timeout issue in customer search APIs by analyzing database execution plans, optimizing SQL joins, and introducing pagination for large account-history responses.
- Implemented REST APIs with **Spring Boot**, Hibernate, PostgreSQL, and Redis caching to support reporting screens that required fast filtering across customer, transaction, and audit data.
- Supported a Java 8 to Java 11 migration by resolving Maven dependency conflicts, updating deprecated libraries, validating container images, and coordinating regression testing with QA teams.
- Improved release reliability by adding Jenkins pipeline stages for unit testing, static analysis, packaged artifact validation, and environment-specific deployment approvals.
- Collaborated with architects, business analysts, and offshore engineers to break large banking features into sprint-ready stories with clear API contracts, acceptance criteria, and rollout plans.

SimbirSoft Company

Software Developer

Boston, MA | Mar 2015 – Jun 2018

- Built Java-based enterprise web applications with **Java 8**, Spring MVC 4.x, Hibernate, Maven, Tomcat, MySQL, and Oracle for logistics, reporting, and back-office workflow systems.
- Implemented front-end screens with **AngularJS 1.x**, JavaScript, HTML, CSS, Bootstrap, and REST service integration for internal dashboards used by operations and support teams.

- Improved page-load performance by **27%** by reducing unnecessary AngularJS watchers, compressing large JSON responses, and moving repeated lookup queries into cached backend services.
- Fixed a production issue where invoice records were intermittently saved without required status history by adding transaction boundaries, validation checks, and rollback-safe service logic.
- Created REST endpoints for shipment tracking, customer notes, document upload, and audit history while maintaining compatibility with older servlet-based application modules.
- Participated in a legacy upgrade from older Struts-style screens to Spring MVC pages, helping replace tightly coupled controllers with clearer service-layer and repository patterns.
- Added JUnit tests around pricing calculations, date handling, and permission checks to reduce regression risk when business rules changed between customer releases.
- Worked closely with senior engineers during deployment support, log analysis, database patch validation, and root-cause reviews for defects found in staging and production.

Microsoft

Software Developer Intern

Cambridge, MA | Aug 2014 – Feb 2015

- Supported internal engineering tools using **Java 7**, JavaScript, SQL Server, REST endpoints, and web UI fixes for dashboards used by development and operations teams.
- Built small service-layer enhancements for internal workflow utilities, including validation rules, data export improvements, and safer handling for missing or malformed request parameters.
- Created front-end prototypes with JavaScript, jQuery, HTML, CSS, and late-internship **AngularJS 1.2** concepts to improve form usability and reduce manual refresh behavior.
- Investigated defects involving inconsistent status values between UI screens and backend records by tracing API responses, SQL queries, and server-side validation paths.
- Wrote unit tests and integration checks for utility methods, request parsing, and database-backed workflows to improve confidence before code was merged into shared branches.
- Assisted senior developers with documentation, code reviews, build troubleshooting, and release notes for internal tools that required stable behavior across multiple browser versions.
- Gained practical experience with Agile ceremonies, source control workflows, issue tracking, and production-minded engineering practices in a large-scale software environment.

Projects

Enterprise Case Management Modernization

- Modernized a legacy Java and JSP-based case management platform into a **Spring Boot**, **Angular**, PostgreSQL, and Redis application with role-based workflows, audit history, document upload, and dashboard reporting. The project included REST API redesign, Angular component reuse, slow-query optimization, authentication cleanup, and staged migration from legacy screens without disrupting active users.

Cloud-Native Customer Operations Platform

- Designed and delivered backend and frontend features for a customer operations platform using **Java 17**, **Spring Boot**, Angular, Kafka, Docker, AWS, PostgreSQL, and Redis. The project supported approval routing, notification events, administrative reporting, retry-safe processing, observability improvements, and CI/CD deployment workflows for faster and safer production releases.

Certifications

- **Oracle Certified Professional: Java SE 11 Developer**
- **AWS Certified Developer – Associate**
- **Spring Professional Certification**
- **Professional Scrum Master I — Scrum.org**
- **Angular Developer Certification — Intermediate Level**

Education

University of North Carolina at Chapel Hill

Bachelor's Degree in Computer Science (2010 – 2014)
