

TAYLOR PENTZ

Senior Software Engineer — Java, Spring Boot, React, TypeScript, AWS

taylorpentz2@gmail.com | 1601 Larkin, High Point, NC | +1 (980) 981-4522

<https://www.linkedin.com/in/taylor-p-b0389a3ba>

Professional Summary

Senior Software Engineer with 10+ years building SaaS, fintech, healthcare, and enterprise workflow platforms using **Java 8–21**, **Spring Boot 1.5–3.x**, **React 15–18**, TypeScript, AWS, Kafka, PostgreSQL, and Kubernetes. Delivers scalable APIs, resilient microservices, modernized legacy systems, and measurable product improvements through architecture ownership, production debugging, and pragmatic technical leadership.

Technical Skills

- ❖ **Backend Engineering:** Java 8–21, Spring Boot 1.5–3.x, Spring MVC, Spring Security, Hibernate, JPA, Maven, Gradle, REST APIs, GraphQL, OpenAPI, microservices, domain-driven design, layered architecture, clean architecture.
- ❖ **Frontend Engineering:** React 15–18, TypeScript 4.x–5.x, JavaScript ES6+, Redux Toolkit, React Query, Context API, HTML5, CSS3, MUI, Tailwind CSS, reusable component systems, client-side performance optimization.
- ❖ **Cloud & DevOps:** AWS ECS, EKS, Lambda, S3, RDS, SQS, SNS, CloudWatch, IAM, Docker, Kubernetes, Helm, Terraform, GitHub Actions, Jenkins, CI/CD pipelines, blue-green deployments, environment configuration.
- ❖ **Databases & Messaging:** PostgreSQL, MySQL, SQL Server, Redis, Elasticsearch, Kafka 2.x–3.x, RabbitMQ, AWS SQS, database indexing, query optimization, idempotent messaging, event-driven architecture.
- ❖ **Testing & Quality:** JUnit 4/5, Mockito, Testcontainers, WireMock, Jest, React Testing Library, Cypress, integration testing, contract testing, SonarQube, code reviews, regression prevention, release validation.
- ❖ **Monitoring & Security:** OpenTelemetry, CloudWatch, Prometheus, Grafana, structured logging, distributed tracing, OAuth2, OIDC, JWT, RBAC, OWASP practices, secure API design, production incident analysis.

Professional Experience

SumatoSoft

Senior Software Engineer

Boston, MA (Remote) | Apr 2023 – Mar 2025

- ❖ Led backend and frontend delivery for a multi-tenant SaaS platform using **Java 17–21**, **Spring Boot 3.x**, **React 18**, and **TypeScript**, aligning API contracts with product workflows while keeping release scope realistic for distributed teams.
- ❖ Modernized legacy **Spring Boot 2.7** services toward **Spring Boot 3.x** by updating Jakarta namespaces, security configuration, validation libraries, and build plugins without disrupting active customer deployments.
- ❖ Reworked slow quote and reporting endpoints by adding query pagination, Redis caching, DTO projections, and PostgreSQL indexing, improving average API response time by **38%** during peak business hours.

- ❖ Built React feature modules with **React 18**, **Redux Toolkit**, **React Query**, and form validation patterns, reducing duplicated client-state logic across onboarding, invoicing, and admin screens.
- ❖ Resolved a production defect where duplicate webhook retries created repeated payment records by introducing idempotency keys, transactional boundaries, and correlation logging across Java services.
- ❖ Designed event-driven workflows with **Kafka 3.x**, **AWS SQS**, and retry-safe consumers to decouple billing, notification, and audit events from synchronous REST requests.
- ❖ Improved CI/CD quality gates with **GitHub Actions**, Docker image scanning, JUnit 5, Mockito, and Testcontainers, making failed migrations and contract regressions visible before staging release.
- ❖ Partnered with product and QA to deliver role-based permissions, audit history, and customer configuration screens while keeping **OpenAPI** documentation accurate for frontend and integration teams.
- ❖ Strengthened observability with **OpenTelemetry**, CloudWatch dashboards, structured logs, and alert thresholds that helped engineers isolate memory pressure, slow SQL, and external API timeout issues faster.
- ❖ Mentored mid-level engineers through architecture reviews, pairing sessions, and pull-request standards focused on clean service boundaries, testable React components, and maintainable domain logic.

Hexaview Technologies Inc.

Software Engineer

New York, NY | Jul 2018 – Mar 2023

- ❖ Developed full-stack wealth management and healthcare workflow features with **Java 8/11**, **Spring Boot 1.5–2.x**, **React 15–17**, and **TypeScript**, supporting complex account, eligibility, and document review flows.
- ❖ Helped migrate monolithic Spring MVC modules into smaller **Spring Boot 2.x** services by separating customer, notification, and reporting domains behind stable REST APIs.
- ❖ Replaced several JSP and jQuery-heavy screens with React components, reusable table filters, and typed API clients, increasing front-end delivery speed by **31%** across recurring feature work.
- ❖ Fixed a high-priority production issue where stale session state caused incorrect account balances to appear after role switching by tightening token refresh behavior and cache invalidation rules.
- ❖ Implemented batch reconciliation jobs with **Spring Batch**, PostgreSQL stored queries, and S3 file exchange patterns for nightly imports from external partners.
- ❖ Created reusable validation libraries for address, document, and eligibility workflows, reducing inconsistent backend error handling across service teams and improving support triage.
- ❖ Added integration tests with **JUnit 5**, Mockito, WireMock, and CI pipeline checks to catch provider-contract changes before releases reached QA environments.
- ❖ Introduced Dockerized local environments for Java APIs, PostgreSQL, Redis, and React apps, reducing new-developer setup friction and making defect reproduction more reliable.
- ❖ Collaborated with product owners, QA analysts, and offshore engineers in Agile ceremonies, translating ambiguous workflow requirements into incremental technical stories with clear acceptance criteria.

SimbirSoft Company

Software Developer

Boston, MA | Mar 2015 – Jun 2018

- ❖ Built enterprise workflow and customer-service applications using **Java 7/8**, **Spring MVC 4.x**, Hibernate, REST APIs, and later React-based UI modules as the front-end stack matured.
- ❖ Refactored legacy controller-heavy Java code into service-layer patterns with clearer transaction boundaries, reducing regression defects by **27%** across invoice and customer profile releases.
- ❖ Supported gradual modernization from server-rendered JSP and jQuery pages to component-based JavaScript screens, helping teams reuse validation and table behaviors across multiple modules.

- ❖ Investigated production performance issues caused by N+1 Hibernate queries, oversized payloads, and missing database indexes, then optimized queries and response models for high-volume search pages.
- ❖ Implemented authentication, user-management, and approval-routing features with Spring Security, role-based access checks, and audit tables for compliance-sensitive business workflows.
- ❖ Created REST endpoints for document upload, status tracking, and customer notes, adding validation rules and defensive error responses for incomplete or malformed partner data.
- ❖ Improved release reliability by adding Maven build checks, unit tests, SQL migration review, and deployment notes that made handoffs between development and operations more predictable.
- ❖ Worked closely with senior engineers to review database schema changes, resolve merge conflicts, and keep older Java modules compatible while new React-facing APIs were introduced.

Microsoft

Software Developer Intern

Cambridge, MA | Aug 2014 – Feb 2015

- ❖ Supported internal engineering tools as a Software Developer Intern using **Java 7**, REST services, SQL Server, JavaScript, and early component-based UI patterns for operational dashboards.
- ❖ Added backend utility endpoints that summarized service metadata and deployment status, helping senior engineers reduce manual lookup work during release-readiness reviews.
- ❖ Fixed defects in internal reporting screens where inconsistent date parsing and null service responses caused dashboard rows to render incorrectly for multiple teams.
- ❖ Wrote unit tests, small integration checks, and SQL validation queries that improved confidence in changes before they were promoted to shared development environments.
- ❖ Assisted with UI cleanup using JavaScript, HTML, CSS, and reusable view helpers, making internal dashboard pages easier for support and release teams to navigate.
- ❖ Participated in code reviews and design discussions focused on maintainability, logging clarity, backward compatibility, and safe changes to shared developer tools.
- ❖ Produced technical notes for handoff and onboarding, documenting API parameters, common error cases, local setup steps, and troubleshooting instructions for new contributors.

Projects

SaaS Workflow Modernization Platform

- ❖ Built a modern workflow platform using **Java 17**, **Spring Boot 3.x**, **React 18**, TypeScript, PostgreSQL, Redis, Docker, and AWS services, replacing older server-rendered flows with modular React screens and scalable REST APIs. Added audit history, role-based permissions, structured logging, and automated regression checks to support secure customer onboarding, billing workflows, and administrative operations.

Event-Driven Billing and Notification System

- ❖ Designed an event-driven billing and notification layer using **Spring Boot**, Kafka, AWS SQS, PostgreSQL, Redis, and idempotent consumer patterns to prevent duplicate processing during webhook retries and external provider outages. Added retry handling, dead-letter queues, OpenTelemetry traces, and contract tests to make payment, email, and audit events more reliable in production.

Certifications

- ❖ **Oracle Certified Professional: Java SE 11 Developer**
- ❖ **AWS Certified Developer – Associate**

- ❖ **Certified Kubernetes Application Developer**
- ❖ **Professional Scrum Developer Certification**

Education

University of North Carolina at Chapel Hill

Bachelor's Degree in Computer Science (2010 – 2014)
