

TAYLOR PENTZ

Senior Software Engineer — Java, Spring Boot, Vue.js, TypeScript, Microservices

taylorpentz2@gmail.com | 1601 Larkin, High Point, NC | +1 (980) 981-4522

<https://www.linkedin.com/in/taylor-p-b0389a3ba>

Professional Summary

Senior Software Engineer with 10+ years delivering enterprise SaaS, healthcare, fintech, and workflow platforms using **Java 8–21**, **Spring Boot 2.x–3.x**, **Vue 2.x–3.x**, **TypeScript**, and cloud-native microservices, known for modernizing legacy systems, improving API reliability, strengthening UI performance, and translating complex business workflows into secure, observable, production-ready software across **AWS** and **Azure** environments.

Technical Skills

- ❖ **Backend Engineering:** **Java 8–21**, **Spring Boot 2.x–3.x**, Spring MVC, Spring Security, Spring Data JPA, Hibernate, REST APIs, GraphQL basics, WebSocket services, Maven, Gradle, JUnit, Mockito, Testcontainers, OpenAPI/Swagger.
- ❖ **Frontend Engineering:** **Vue 2.x–3.x**, Vue Router, Vuex, Pinia, Composition API, Options API, **TypeScript**, JavaScript ES6+, Vite, Webpack, Axios, HTML5, CSS3, SCSS, Tailwind CSS, Element UI, Vuetify.
- ❖ **Architecture & Integration:** **Microservices**, modular monolith modernization, event-driven workflows, domain-driven design basics, API gateway patterns, OAuth2/OIDC, JWT, RBAC, Saga patterns, idempotent APIs, distributed tracing, caching strategies.
- ❖ **Cloud & DevOps:** **AWS** EC2, ECS, Lambda, S3, RDS, CloudWatch, IAM, API Gateway, SQS, SNS; **Azure App Service**, Azure SQL, Azure DevOps; Docker, Kubernetes basics, Helm, GitHub Actions, Jenkins, GitLab CI/CD, Terraform basics.
- ❖ **Databases & Messaging:** PostgreSQL, MySQL, SQL Server, MongoDB, Redis, Elasticsearch, Kafka, RabbitMQ, Flyway, Liquibase, query tuning, indexing, schema migration, transactional consistency.
- ❖ **Quality & Monitoring:** JUnit 5, Mockito, Cypress, Jest, Vitest, Postman, REST Assured, SonarQube, ESLint, Prettier, Datadog, Prometheus, Grafana, ELK Stack, log correlation, alert tuning, production incident analysis.
- ❖ **Senior Engineering Practices:** Technical design reviews, code reviews, mentoring, CI/CD governance, secure coding, performance profiling, legacy modernization, release planning, Agile/Scrum delivery, production support, stakeholder communication.

Professional Experience

SumatoSoft

Senior Software Engineer

Boston, MA (Remote) | Apr 2023 – Mar 2025

- ❖ Led development of enterprise workflow modules using **Java 17–21**, **Spring Boot 3.x**, **Vue 3.x**, **TypeScript**, and **PostgreSQL**, delivering secure dashboards, approval flows, and customer-facing API capabilities for SaaS clients.

- ❖ Modernized legacy **Spring Boot 2.7** services into **Spring Boot 3.x** components by refactoring deprecated security configuration, updating Jakarta namespaces, and validating API behavior through automated regression suites.
- ❖ Built reusable **Vue 3 Composition API** components with **Pinia**, Vite, and TypeScript, reducing duplicated frontend logic across workflow screens and improving maintainability for multi-tenant product teams.
- ❖ Improved high-volume reporting endpoints by redesigning JPA queries, adding PostgreSQL composite indexes, and introducing Redis caching, which reduced average API latency by **38%** during peak business hours.
- ❖ Resolved production incidents involving duplicate workflow approvals by implementing idempotency keys, transaction boundaries, and better retry handling across **Spring Boot** services and message-driven processing jobs.
- ❖ Designed REST API contracts with **OpenAPI**, request validation, pagination, and consistent error models, helping frontend and backend teams integrate faster without repeated contract clarification.
- ❖ Strengthened authentication and authorization using **Spring Security**, OAuth2, JWT validation, and role-based access controls, preventing unauthorized access across administrative and customer-facing Vue modules.
- ❖ Implemented CI/CD improvements with **GitHub Actions**, Docker, SonarQube quality gates, and environment-specific configuration, making release promotion more predictable across development, staging, and production.
- ❖ Collaborated with product managers, QA engineers, and customer stakeholders to break down complex workflow requirements into technical designs, implementation tasks, test scenarios, and release-ready increments.
- ❖ Mentored mid-level engineers on **Java**, **Vue**, clean service boundaries, test coverage, and production debugging, raising team consistency around code quality and supportable architecture decisions.

Hexaview Technologies Inc.

Software Engineer

New York, NY | Jul 2018 – Mar 2023

- ❖ Developed customer portal and financial workflow features using **Java 8–11**, **Spring Boot 2.x**, **Vue 2.x**, Vuex, MySQL, and Redis, supporting account management, document review, reporting, and notification workflows.
- ❖ Migrated selected frontend modules from legacy jQuery and server-rendered templates to **Vue 2.x**, improving UI consistency while keeping older Spring MVC pages stable during phased modernization.
- ❖ Introduced **Vue 3** for new internal modules near the later stage of the engagement, using Composition API patterns where appropriate while maintaining compatibility with existing **Vue 2** production screens.
- ❖ Reduced recurring form submission defects by **31%** by adding shared validation rules, API-level request checks, and Cypress coverage for high-risk user journeys across onboarding and account update workflows.
- ❖ Refactored monolithic service classes into smaller **Spring Boot** service layers, improving separation between controllers, business rules, repositories, and external integration adapters.
- ❖ Solved production timeout issues in statement generation by optimizing SQL joins, adding async processing for long-running jobs, and improving database connection pool settings under heavy load.
- ❖ Implemented secure document upload workflows using virus-scan hooks, metadata validation, signed download URLs, and audit trails for regulated customer files.
- ❖ Created integration tests with **JUnit**, Mockito, REST Assured, and Testcontainers, increasing confidence in payment, notification, and document APIs before production deployment.
- ❖ Supported Agile delivery by estimating backlog items, reviewing pull requests, coordinating with QA, and helping release managers validate hotfixes, rollbacks, and database migration scripts.

SimbirSoft Company

Software Developer

Boston, MA | Mar 2015 – Jun 2018

- ❖ Built and maintained Java web applications using **Java 8**, Spring MVC, early **Spring Boot 1.x**, Hibernate, JSP, JavaScript, and MySQL for business operations, reporting, and client administration systems.
- ❖ Introduced targeted **Vue 2.x** widgets into legacy Spring MVC screens after stable adoption, improving interactive filtering, inline validation, and partial page updates without rewriting the entire application.
- ❖ Improved reporting page performance by **42%** by replacing inefficient Hibernate lazy-loading patterns, adding database indexes, and simplifying server-side aggregation queries.
- ❖ Migrated older XML-heavy Spring configuration into annotation-based components, reducing configuration drift and making service wiring easier for developers joining existing projects.
- ❖ Fixed recurring production issues involving stale session data and inconsistent user permissions by tightening session handling, adding server-side authorization checks, and improving audit logging.
- ❖ Implemented REST endpoints for customer search, status updates, file metadata, and operational dashboards, enabling newer frontend screens to consume structured JSON instead of server-rendered fragments.
- ❖ Added unit and integration tests around critical service methods using **JUnit**, Mockito, and in-memory test databases, reducing regression risk during release stabilization cycles.
- ❖ Worked closely with senior engineers to review legacy defects, document technical debt, and deliver incremental modernization without disrupting active customer operations.

Microsoft

Software Developer Intern

Cambridge, MA | Aug 2014 – Feb 2015

- ❖ Contributed to internal engineering tools using **Java 7–8**, SQL, JavaScript, and service-oriented design patterns, supporting team workflows that required reliable data retrieval and clear operational visibility.
- ❖ Built small backend utilities for data validation, scheduled cleanup, and internal reporting, helping engineers reduce manual checks across repetitive support and analysis tasks.
- ❖ Assisted in debugging API issues caused by inconsistent null handling, malformed request payloads, and edge-case database records, then documented fixes for future maintainers.
- ❖ Enhanced internal web screens with structured JavaScript, HTML, and CSS, improving usability for administrative workflows before modern component frameworks became standard in the team.
- ❖ Created SQL queries and lightweight reporting views to help stakeholders inspect operational records, identify inconsistent states, and validate results after service-side changes.
- ❖ Participated in code reviews, sprint planning, and technical walkthroughs, learning production engineering expectations around readability, testability, and maintainable service boundaries.
- ❖ Prepared handoff notes, test evidence, and implementation summaries for senior engineers, ensuring internship contributions could be reviewed, extended, and safely maintained after completion.

Projects

Enterprise Workflow Modernization Platform

- ❖ Designed and delivered a modernization initiative using **Java 17**, **Spring Boot 3.x**, **Vue 3**, **TypeScript**, PostgreSQL, Redis, Docker, and GitHub Actions, replacing fragmented approval screens with secure workflow dashboards, reusable UI components, consistent API contracts, and observable backend services.

Financial Document & Reporting Portal

- ❖ Built a customer-facing portal using **Java 11**, **Spring Boot 2.x**, **Vue 2.x**, Vuex, MySQL, Redis, and Cypress, supporting document uploads, account status tracking, reporting exports, audit logging, and production-grade validation for regulated business operations.

Certifications

- ❖ **Oracle Certified Professional: Java SE 11 Developer**
- ❖ **Spring Professional Certification**
- ❖ **AWS Certified Developer – Associate**
- ❖ **Microsoft Certified: Azure Developer Associate**
- ❖ **Docker Certified Associate**

Education

University of North Carolina at Chapel Hill

Bachelor's Degree in Computer Science (2010 – 2014)
