Professional Summary

Senior Software Engineer with 10+ years building SaaS, fintech, healthcare, and enterprise workflow platforms using **Vue 2.x–3.x**, **Node.js 8–20**, **TypeScript**, **Express**, **NestJS**, **PostgreSQL**, **MongoDB**, **AWS**, and **Docker**, delivering scalable full-stack systems, legacy modernization, API reliability, and measurable product value through pragmatic architecture, clean delivery practices, mentoring, and production-focused engineering.

Technical Skills

- ❖ **Frontend Engineering:** **Vue.js 2.x–3.x**, Vue Router, Vuex, Pinia, Composition API, JavaScript ES6+, TypeScript, HTML5, CSS3, SCSS, Tailwind CSS, Bootstrap, responsive UI, component architecture.
- ❖ **Backend Engineering:** **Node.js 8–20**, Express.js, NestJS, REST APIs, GraphQL basics, authentication, authorization, service-layer architecture, background jobs, API versioning, webhook processing.
- ❖ **Databases & Caching:** **PostgreSQL**, MySQL, MongoDB, Redis, query optimization, indexing, migrations, transactions, schema design, data validation.
- ❖ **Cloud & DevOps:** **AWS**, Docker, GitHub Actions, Jenkins, CI/CD pipelines, S3, ECS, Elastic Beanstalk, CloudWatch, Linux, Nginx, environment configuration.
- ❖ **Testing & Quality:** Jest, Vitest, Supertest, Playwright, Cypress, unit testing, integration testing, component testing, regression testing, code reviews, defect triage.
- ❖ **Architecture & Practices:** Microservices, modular monoliths, event-driven workflows, SaaS architecture, Agile/Scrum, observability, secure coding, mentoring, production support.

Professional Experience

SumatoSoft

Senior Software Engineer

Boston, MA (Remote) | Apr 2023 – Mar 2025

- Led full-stack delivery for multi-tenant SaaS workflows using **Vue 3.x**, **TypeScript**, **Node.js 16/18**, **Express**, and **PostgreSQL**, translating ambiguous product requests into production-ready modules with clear API contracts and maintainable front-end boundaries.
- Modernized legacy Vue 2 screens into **Vue 3 Composition API** components with reusable form, table, and validation patterns, reducing duplicated UI logic and improving feature delivery speed by **28%** across high-change customer portals.
- Designed **Node.js** service layers around **REST APIs**, role-aware authorization, and transactional data updates, improving reliability for subscription, account-management, and workflow automation features used by internal operations teams.
- Resolved production checkout and onboarding defects caused by race conditions, stale Vuex state, and non-idempotent webhook retries by adding **idempotency keys**, optimistic-lock checks, and structured error handling.

- Replaced slow dashboard queries with indexed **PostgreSQL** access patterns, **Redis-backed caching**, and paginated API responses, cutting high-volume report load times by **35%** during peak customer activity.
- Built new customer-facing notification, document upload, and audit-history features using **Vue Router**, **Pinia**, **Node.js workers**, S3-compatible storage, and background retry queues.
- Improved **CI/CD pipelines** with **Docker**, **GitHub Actions**, test gates, and environment-specific configuration, making releases safer across staging and production without blocking urgent hotfixes.
- Added unit, integration, and component coverage with **Vitest**, **Jest**, **Supertest**, and **Playwright**, catching permission regressions, date-format errors, and API contract mismatches before release.
- Partnered with product managers, QA engineers, and cloud teams to break large modernization work into incremental releases, balancing **technical debt reduction** with visible business value.
- Mentored mid-level engineers through code reviews, pairing sessions, and architecture discussions focused on **modular Vue design**, secure Node.js patterns, observability, and pragmatic trade-off decisions.

Hexaview Technologies Inc.

Software Engineer

New York, NY | Jul 2018 – Mar 2023

- Developed enterprise web applications using **Vue 2.x**, **JavaScript/TypeScript**, **Node.js 8/12/14**, **Express 4**, **MongoDB**, and **MySQL**, supporting customer service, analytics, and internal workflow teams.
- Migrated selected jQuery and server-rendered pages into **Vue single-page modules** with reusable state, routing, and API integration patterns, improving user task completion time by **31%** for operational screens.
- Built **RESTful Node.js APIs** for user profiles, search, reporting, permissions, and file-processing workflows, keeping endpoints versioned and backward compatible during gradual front-end replacement.
- Fixed production issues involving duplicate form submissions, memory-heavy exports, inconsistent timezone conversion, and poorly handled **500 errors** by adding validation, queueing, logging, and fallback behavior.
- Refactored older callback-heavy **Node.js services** into promise-based and async/await workflows over time, improving readability and reducing defects during feature changes.
- Implemented complex **Vue components** for editable grids, filters, modal workflows, and approval screens, giving business users faster access to structured data without manual spreadsheet handoffs.
- Strengthened database reliability through **query optimization**, compound indexes, transaction boundaries, and safer migration scripts across MySQL and MongoDB-backed services.
- Supported **AWS deployments** with Docker, Elastic Beanstalk/ECS patterns, CloudWatch logs, S3 assets, and environment-based configuration for staging and production.
- Collaborated with distributed engineers in Agile ceremonies, reviewed pull requests, wrote technical handoff notes, and helped standardize reusable front-end and backend conventions.

SimbirSoft Company

Software Developer

Boston, MA | Mar 2015 – Jun 2018

- Built and maintained web applications with **JavaScript**, **Node.js 0.10/4**, **Express**, **HTML**, **CSS**, **jQuery**, **AngularJS**, and early Vue adoption for lightweight interactive modules as client requirements evolved.
- Delivered backend features for customer portals, scheduling flows, content administration, and reporting tools, connecting **Node.js APIs** with MySQL, PostgreSQL, and MongoDB data stores.
- Improved slow administrative pages by removing unnecessary server round trips, batching API calls, optimizing SQL queries, and caching reference data, increasing page responsiveness by **24%**.

- Helped upgrade older JavaScript code from tightly coupled **jQuery handlers** into component-oriented UI modules, making validation, event handling, and partial-page updates easier to maintain.
- Resolved bugs around session expiration, file-upload failures, duplicate notifications, and malformed request payloads by adding middleware validation, clearer API responses, and regression tests.
- Implemented new reporting exports, dashboard filters, role-based views, and customer configuration screens while balancing legacy browser constraints with newer JavaScript practices.
- Participated in production support rotations, reading logs, reproducing defects locally, preparing database repair scripts, and coordinating fixes with QA before deployment.
- Documented API behavior, deployment steps, and common troubleshooting notes so junior developers could safely modify older services without reintroducing known issues.

Microsoft

Software Developer Intern

Cambridge, MA | Aug 2014 – Feb 2015

- Supported internal engineering tools using **JavaScript, Node.js 0.10, C#, ASP.NET MVC, SQL Server, HTML, CSS, and jQuery** during a software development internship focused on developer productivity.
- Built small dashboard enhancements, data-entry screens, and validation scripts that helped internal users review operational data with fewer manual checks and clearer status visibility.
- Assisted senior engineers with debugging API response inconsistencies, front-end rendering issues, and SQL query errors by reproducing defects and documenting repeatable steps.
- Added automated checks for common input-validation cases, reducing regression risk in internal tools where small data-quality issues could slow downstream testing work.
- Updated legacy UI behavior around search filters, sortable tables, and form messages so internal teams could complete routine actions with fewer support questions.
- Participated in code reviews, sprint planning, and release verification, learning how production-minded teams handle traceability, testing discipline, and maintainable engineering standards.
- Prepared technical notes for handoff items, setup steps, and known limitations, making it easier for full-time engineers to continue enhancements after the internship ended.

Projects

- **Multi-Tenant SaaS Workflow Modernization:** Rebuilt legacy customer workflow screens from Vue 2 patterns into **Vue 3, TypeScript, Pinia**, and modular API contracts, improving maintainability, reducing repeated UI code, and supporting faster release cycles for account, notification, and audit-history features.
- **Node.js Reporting and Integration Platform:** Designed a backend reporting and webhook-processing layer using **Node.js, Express, PostgreSQL, Redis**, and background workers, improving export stability, preventing duplicate webhook processing, and giving operations teams more reliable visibility into customer activity.

Certifications

- **AWS Certified Developer – Associate**
- **MongoDB Certified Developer Associate**
- **Docker Certified Associate**
- **JavaScript Algorithms and Data Structures Certification**

Education

University of North Carolina at Chapel Hill

Bachelor's Degree in Computer Science (2010 – 2014)
