

DevOps / AWS / Docker / Kubernetes / Terraform

DevOps and cloud infrastructure engineer with strong experience building scalable delivery platforms and production automation across modern SaaS and distributed systems environments. Over years of working in high-traffic software and platform engineering teams, expertise developed around DevOps, AWS Cloud, Docker, Kubernetes, CI/CD automation, and Infrastructure as Code while supporting backend engineering teams delivering microservices and API platforms. Extensive hands-on work modernizing legacy deployment systems into cloud-native environments using Terraform, GitHub Actions, and container orchestration while improving reliability, monitoring, and release velocity across engineering organizations. Proven ability to troubleshoot complex deployment failures, resolve infrastructure incidents, and optimize system observability using modern monitoring stacks, enabling highly resilient production environments and faster engineering delivery cycles.

Go / Python / gRPC / REST / AWS / MLOps

Senior Software Engineer with ~10 years delivering backend systems, data pipelines, and production AI/ML services across Go, Python, and modern web platforms. Strong focus on reliability, observability, and operational excellence—turning brittle integrations into repeatable, traceable, and on-call friendly systems using structured logging, metrics, and distributed tracing. Experienced in event-driven architectures, gRPC/REST service design, idempotency and backpressure patterns, and practical MLOps workflows including dataset lineage, reproducible training runs, and safe rollout strategies for inference endpoints.

Java / Spring Boot / Angular / TypeScript

Senior Software Engineer with 10+ years of experience designing and delivering enterprise-grade applications across SaaS, business workflow, internal platform, and data-driven product engineering environments, with strong specialization in Java 8–21, Spring Boot 2.x–3.x, Angular 8–18, TypeScript 3.x–5.x, and cloud-native distributed systems. Proven success building secure APIs, modernizing legacy platforms, resolving high-impact production defects, and leading migration work from monolithic or older framework implementations into scalable service-oriented architectures. Known for improving reliability, reducing incident volume, accelerating delivery velocity, and implementing maintainable frontend and backend foundations that support long-term product growth.

Java / Spring Boot / Backend / AWS

Senior Java Backend Engineer with 9+ years of experience designing resilient API platforms, transaction-heavy services, and cloud-native backend systems for SaaS, enterprise workflow, logistics, and data-driven product environments. Strong hands-on depth in Java 8–21, Spring Boot 2.3–3.2, Spring Cloud, Hibernate, and distributed service design, with consistent ownership of architecture, debugging, modernization, and delivery quality. Proven record improving throughput, reducing failure rates, and stabilizing critical integrations through careful

refactoring, observability, and secure API design. Known for solving complex production issues, leading legacy migration efforts, and implementing backend features that scale cleanly under real business load.

Java / Spring Boot / React / TypeScript / AWS

Senior Software Engineer with 10+ years of experience building enterprise platforms across the financial services, healthcare, retail, and SaaS industries, specializing in Java 8–21, Spring Boot 2.x–3.x, React 16–18, TypeScript 4.x–5.x, distributed APIs, and cloud-native delivery on AWS. Strong record of modernizing legacy monoliths into scalable services, resolving production defects, improving release reliability, and delivering secure user-facing products with measurable business impact. Known for leading migrations, stabilizing complex integrations, optimizing data-heavy workflows, and partnering across product, QA, and DevOps to ship maintainable systems that reduce operational friction and accelerate roadmap execution.

Angular / Node.js / Express / NestJS / AWS / Azure

Senior Software Engineer with 10+ years of experience building enterprise SaaS, internal business platforms, and customer-facing web applications with a strong focus on scalable frontend architecture and API-driven backend systems. Deep hands-on expertise across Angular 2–18, Node.js 10–22, TypeScript 3.x–5.x, and cloud-based delivery using modern CI/CD and observability practices. Strong record of improving release quality, reducing production defects, modernizing legacy code, and shipping secure features that improved performance, usability, and operational stability across fast-moving product environments.

C# / .NET / Angular / SQL Server / AWS / Azure / GCP

Senior Software Engineer with 10+ years of experience building enterprise web platforms, internal business systems, and cloud-connected applications with C#, .NET Framework 4.6–4.8, .NET Core 3.1–.NET 8, Angular 8–18, and SQL Server across SaaS, operations, finance, and workflow automation environments. Strong background in modernizing legacy systems, resolving high-impact production defects, improving API reliability, and delivering secure user-facing features with measurable results. Known for leading migrations from monolithic applications to service-oriented platforms, tightening CI/CD quality gates, and partnering with product, QA, and DevOps teams to ship maintainable software faster.

C# / .NET / ASP.NET Core / Backend / Azure / AWS / GCP

Senior Software Engineer with 10+ years of experience designing and scaling backend platforms for SaaS, enterprise workflow, and cloud-based business systems using C# (.NET 6–8), ASP.NET Core 6–8, and distributed service design. Strong background in building secure REST APIs, modernizing legacy .NET Framework applications into cloud-ready services, and improving reliability through observability, performance tuning, and automated delivery. Known for solving difficult production issues, reducing latency, stabilizing releases, and delivering

backend features that support high-volume integrations, data processing, authentication, and multi-environment deployments across AWS, Azure, and containerized infrastructure.

React / TypeScript / .NET / ASP.NET Core

Senior Full-Stack Engineer with ~10 years building React + TypeScript frontends and .NET / ASP.NET Core backend services for SaaS products across fintech-style operations, identity/security-heavy workflows, and data-intensive B2B platforms. I specialize in API-first design (versioning, pagination, stable error contracts), BFF/gateway patterns, and event-driven processing (queues/streams, idempotency, deduplication, DLQs) that stays reliable under retries, partial outages, and replay. I've modernized legacy .NET Framework-era modules into modern .NET LTS services, replacing fragile shared-state code with testable boundaries, safer deploy units, and measurable SLOs. Strong production mindset: OpenTelemetry traces/metrics/logs into Datadog/Grafana, actionable runbooks, and defensive design (rate limiting, circuit breakers, backpressure). Comfortable owning architecture, mentoring engineers, and shipping maintainable systems that remain operable long after launch.

Vue.js / TypeScript / C# / .NET / ASP.NET Core / AWS

Senior full-stack engineer with ~10 years of experience building Vue.js frontends and C#/.NET (ASP.NET Core Web APIs) on AWS-first cloud architectures, with strong ownership across design, delivery, and operations. Proven in microservices, event-driven workflows, secure API design, and production observability using OpenTelemetry, Datadog, Prometheus, and Grafana. Experienced modernizing legacy systems, improving reliability with SLO-driven monitoring, and driving delivery through disciplined CI/CD and IaC.

AI Engineer / Python / FastAPI / RAG / LLM / LangGraph

AI Engineer and Senior Software Engineer with ~10 years shipping production ML and LLM systems across government services, health & benefits administration, and identity-risk workflows serving millions of citizens and caseworkers. I build Python 3.10–3.11 agentic backends (FastAPI 0.100+, Celery 5, Redis 6) that turn messy documents and policy rules into reliable actions via RAG, tool calling, and audited decision traces. I've delivered retrieval stacks with embeddings + hybrid search (OpenSearch 2.x / Elasticsearch 7.x), stream processing (Kafka 2.x), and orchestration (Temporal 1.x / Step Functions) while meeting tight latency budgets. Known for hardening systems: schema contracts, idempotency keys, safe retries, and OpenTelemetry + Datadog dashboards that cut MTTR and keep PII/PHI, SOC 2, and FedRAMP readiness practical. I run eval harnesses so outputs stay safe, and I train and serve models (scikit-learn 1.2, PyTorch 2.0) with rollout gates in CI/CD (GitHub Actions). I've built multi-agent workflows with LangGraph 0.1 and strict tool allowlists for least-privilege execution.

DevOps / AWS / Docker / Kubernetes / Terraform

DevOps and cloud infrastructure engineer with strong experience building scalable delivery platforms and production automation across modern SaaS and distributed systems environments. Over years of working in high-traffic software and platform engineering teams, expertise developed around DevOps, AWS Cloud, Docker, Kubernetes, CI/CD automation, and Infrastructure as Code while supporting backend engineering teams delivering microservices and API platforms. Extensive hands-on work modernizing legacy deployment systems into cloud-native environments using Terraform, GitHub Actions, and container orchestration while improving reliability, monitoring, and release velocity across engineering organizations. Proven ability to troubleshoot complex deployment failures, resolve infrastructure incidents, and optimize system observability using modern monitoring stacks, enabling highly resilient production environments and faster engineering delivery cycles.

Go / Python / gRPC / REST / AWS / MLOps

Senior Software Engineer with ~10 years delivering backend systems, data pipelines, and production AI/ML services across Go, Python, and modern web platforms. Strong focus on reliability, observability, and operational excellence—turning brittle integrations into repeatable, traceable, and on-call friendly systems using structured logging, metrics, and distributed tracing. Experienced in event-driven architectures, gRPC/REST service design, idempotency and backpressure patterns, and practical MLOps workflows including dataset lineage, reproducible training runs, and safe rollout strategies for inference endpoints.

Java / Spring Boot / Angular / TypeScript

Senior Software Engineer with 10+ years of experience designing and delivering enterprise-grade applications across SaaS, business workflow, internal platform, and data-driven product engineering environments, with strong specialization in Java 8–21, Spring Boot 2.x–3.x, Angular 8–18, TypeScript 3.x–5.x, and cloud-native distributed systems. Proven success building secure APIs, modernizing legacy platforms, resolving high-impact production defects, and leading migration work from monolithic or older framework implementations into scalable service-oriented architectures. Known for improving reliability, reducing incident volume, accelerating delivery velocity, and implementing maintainable frontend and backend foundations that support long-term product growth.

Java / Spring Boot / Backend / AWS

Senior Java Backend Engineer with 9+ years of experience designing resilient API platforms, transaction-heavy services, and cloud-native backend systems for SaaS, enterprise workflow, logistics, and data-driven product environments. Strong hands-on depth in Java 8–21, Spring Boot 2.3–3.2, Spring Cloud, Hibernate, and distributed service design, with consistent ownership of architecture, debugging, modernization, and delivery quality. I've built multi-agent workflows with LangGraph 0.1 and strict tool allowlists for least-privilege execution.

Vue.js / TypeScript / Node.js / AWS

Senior Full-Stack Engineer with ~10 years building Vue.js + TypeScript frontends and Node.js backend services on AWS-first architectures. Strong track record designing API gateway/BFF layers, event-driven pipelines, and scalable data flows with Kafka, AWS SQS/SNS, and RabbitMQ. Experienced modernizing legacy systems into microservices with Docker, Kubernetes, and disciplined CI/CD, while improving production reliability through OpenTelemetry, Datadog, Prometheus/Grafana, and actionable runbooks. Comfortable owning

architecture, mentoring engineers, and delivering secure, observable, and operable systems end-to-end.

React / Node.js / Express / NestJS / AWS / Azure

Senior Software Engineer with 10+ years of experience building SaaS, operational business platforms, and customer-facing web products with a strong focus on React, Node.js, scalable APIs, and cloud-based delivery. Deep background in translating messy business workflows into reliable engineering systems, improving release quality, and stabilizing production issues across frontend and backend layers. Strong hands-on work across React 16–18, Node.js 14–20, TypeScript 3.x–5.x, JavaScript ES6+, Express.js, NestJS, PostgreSQL, Redis, AWS, Docker, and CI/CD, with proven success modernizing legacy modules, fixing performance bottlenecks, implementing secure integrations, and delivering maintainable features in fast-moving product environments.

Node.js / Express / NestJS / AWS / Azure

Senior Software Engineer with 10+ years of experience building backend platforms, API-first systems, and cloud-native services for networking, business workflow, and SaaS-driven product environments. Strong background designing resilient services with Node.js 14–22, TypeScript 4.x–5.x, Express.js 4.x–5.x, and NestJS 9.x–10.x, with practical ownership across service decomposition, event-driven processing, relational data design, caching, and production reliability. Delivers realistic engineering value by solving latency issues, stabilizing error-prone integrations, modernizing legacy code paths, and implementing secure backend capabilities that improve maintainability, release confidence, and operational visibility.

Angular / Node.js / Express / NestJS / AWS / Azure

Senior Software Engineer with 10+ years of experience building enterprise SaaS, internal business platforms, and customer-facing web applications with a strong focus on scalable frontend architecture and API-driven backend systems. Deep hands-on expertise across Angular 2–18, Node.js 10–22, TypeScript 3.x–5.x, and cloud-based delivery using modern CI/CD and observability practices. Strong record of improving release quality, reducing production defects, modernizing legacy code, and shipping secure features that improved performance, usability, and operational stability across fast-moving product environments.

PHP backend

Senior Backend Engineer with ~10 years of experience building PHP services and API platforms on AWS-first architectures, with proven delivery across microservices, event-driven workflows, and secure enterprise integrations. Strong background in PostgreSQL/MySQL/SQL Server data modeling, Redis caching, Kafka and AWS SQS/SNS pipelines, and search stacks using Elasticsearch/OpenSearch. Known for improving operability with OpenTelemetry, Datadog, Prometheus/Grafana, and CloudWatch, while enforcing OAuth2/OIDC, JWT, RBAC/ABAC, and audit logging as default platform standards.

PHP React

Senior Backend Engineer with ~10 years of experience building PHP services and API platforms on AWS-first architectures, with proven delivery across microservices, event-driven workflows, and secure enterprise integrations. Strong background in PostgreSQL/MySQL/SQL Server data modeling, Redis caching, Kafka and AWS SQS/SNS pipelines, and search stacks using Elasticsearch/OpenSearch. Known for improving operability with OpenTelemetry, Datadog, Prometheus/Grafana, and CloudWatch, while enforcing OAuth2/OIDC, JWT, RBAC/ABAC, and audit logging as default platform standards.
