+1 (430) 279-2231 | markhaney.dev@outlook.com

PROFESSIONAL SUMMARY

Staff Software Engineer with 10+ years of experience in SaaS, property technology, civic technology, nonprofit CRM, and cloud services, specializing in **Java 8-21**, **Spring Boot 2.1-3.2**, **Vue 2.6-3.4**, REST APIs, microservices, and AWS-based delivery. Experienced in modernizing legacy Java services, migrating Vue 2 applications to Vue 3, improving database performance, resolving production defects, and building secure, maintainable features across high-traffic business platforms. Strong background in **PostgreSQL**, **MongoDB**, Docker, CI/CD, unit testing, Agile delivery, and mentoring engineers through clean architecture and production-focused ownership.

TECH SKILLS

- ❖ **Languages:** Java 8-21, JavaScript ES6+, TypeScript 3.7-5.x, SQL, HTML5, CSS3
- ❖ **Backend:** Spring Boot 2.1-3.2, Spring MVC, Spring Security, Spring Data JPA, Hibernate 5.2-6.4, REST APIs, Microservices
- ❖ **Frontend:** Vue 2.6-3.4, Vuex 3-4, Pinia 2.x, Vue Router 3-4, Vuetify 2-3, Axios, Vite, Webpack
- ❖ **Databases:** PostgreSQL 10-16, MySQL 5.7-8, MongoDB 4-6, Redis 5-7
- ❖ **Cloud & DevOps:** AWS EC2, S3, RDS, ECS, Lambda, Docker, Kubernetes, Jenkins, GitHub Actions, GitLab CI
- ❖ **Testing:** JUnit 4-5, Mockito, Testcontainers, Cypress, Jest, Vue Test Utils, Integration Testing
- ❖ **Architecture:** Microservices, Event-Driven Design, REST, OAuth2, JWT, Domain-Driven Design, CI/CD, Agile/Scrum

PROFESSIONAL EXPERIENCE

Staff Software Engineer

Relatio

Jun 2022 – Apr 2026

Las Vegas, NV

- ❖ Led full-stack modernization for a SaaS collaboration platform using **Java 17-21**, **Spring Boot 2.7-3.2**, **Vue 3.2-3.4**, PostgreSQL, Redis, Docker, and AWS ECS.
- ❖ Designed secure **Spring Boot microservices** for user workflows, permissions, audit trails, and notification delivery, improving service reliability by **3%** through cleaner API contracts.
- ❖ Migrated legacy **Vue 2.6** modules into **Vue 3.4** with Composition API, Pinia, and Vite, reducing frontend bundle size by **2%** while improving page maintainability.
- ❖ Resolved a recurring production issue where stale Redis cache entries caused incorrect dashboard counts by adding event-based invalidation and integration tests.
- ❖ Implemented role-based access control with **Spring Security 6**, JWT validation, and permission scopes, strengthening tenant isolation across enterprise customer accounts.
- ❖ Improved PostgreSQL query performance by rewriting inefficient joins, adding targeted indexes, and validating execution plans, reducing slow endpoint latency by **3%**.
- ❖ Built reusable Vue component libraries for data tables, filters, modals, and form validation, helping product teams release workflow features faster and with fewer regressions.

- ❖ Upgraded backend services from **Spring Boot 2.7** to **Spring Boot 3.2** by refactoring Jakarta namespaces, dependency versions, security filters, and test containers.
- ❖ Fixed intermittent CI failures caused by unstable mocked time zones by introducing deterministic test clocks, cleaner fixtures, and contract-level integration coverage.
- ❖ Partnered with product and QA teams to diagnose WebSocket disconnect issues, then added retry handling, server heartbeat checks, and better browser-side error messaging.
- ❖ Mentored engineers on **Java clean architecture**, Vue state management, pull request quality, and production debugging practices across distributed feature teams.
- ❖ Introduced OpenAPI documentation and automated API schema validation, reducing backend/frontend integration mismatch by **2%** during multi-team release cycles.

Senior Software Engineer

AppFolio

Feb 2018 – May 2022

Goleta, CA

- ❖ Built property management features with **Java 11-17**, **Spring Boot 2.1-2.7**, **Vue 2.6**, Vuex, PostgreSQL, MongoDB, Docker, Jenkins, and AWS RDS.
- ❖ Developed lease, payment, tenant messaging, and reporting workflows with **Spring REST APIs**, improving internal processing accuracy by **3%** through validation rules.
- ❖ Migrated legacy server-rendered UI screens into **Vue 2.6** components, reducing support tickets by **2%** through clearer validation feedback and faster user interactions.
- ❖ Solved a production bug where duplicate payment submissions occurred during browser refresh by adding idempotency keys, transaction guards, and backend request tracing.
- ❖ Optimized rent ledger queries by replacing repeated ORM lazy loading with explicit fetch strategies and indexes, reducing report generation delays by **3%**.
- ❖ Implemented document upload and review features using AWS S3, pre-signed URLs, and backend virus-scan callbacks while keeping audit history consistent.
- ❖ Refactored large Java service classes into domain-focused modules, improving unit test coverage and reducing regression risk during quarterly product releases.
- ❖ Upgraded build pipelines from older Maven profiles to standardized Docker-based Jenkins jobs, improving environment consistency across development and staging.
- ❖ Built Vuex-based shared state modules for payments, residents, and property filters, reducing duplicated frontend logic across multiple product workflows.
- ❖ Collaborated with support teams to reproduce customer-facing defects, trace API failures, and release hotfixes with rollback plans and post-release verification.

Software Engineer

Blackbaud

Jul 2016 – Jan 2018

Charleston, SC

- ❖ Delivered nonprofit CRM and donation management features using **Java 8**, Spring MVC, Hibernate 5.x, REST APIs, jQuery, PostgreSQL, and early Vue adoption for internal tools.
- ❖ Built donor search and campaign reporting endpoints with **Java 8** and Hibernate, improving staff data lookup speed by **2%** after query and index optimization.
- ❖ Implemented small **Vue 2.x** admin widgets for internal workflow screens where reactive filtering and reusable form controls improved data-entry consistency.

- ❖ Resolved a critical reconciliation bug where failed webhook retries created mismatched donation states by adding retry limits, status locks, and audit logging.
- ❖ Improved nightly batch jobs by splitting large donation sync tasks into smaller chunks, reducing timeout failures by **3%** during high-volume campaign periods.
- ❖ Modernized older Spring XML configuration into annotation-based components, making service wiring easier to test and reducing deployment configuration mistakes.
- ❖ Added JUnit and Mockito coverage around payment validation, campaign rules, and donor merge workflows to catch edge cases before release.
- ❖ Built REST endpoints for exporting donor activity, campaign totals, and compliance reports while keeping permission checks centralized and reusable.
- ❖ Worked closely with QA to reproduce browser-specific issues in admin screens, then fixed inconsistent validation behavior across Chrome, Firefox, and Edge.

Software Developer

Granicus

May 2014 – Jun 2016

Dallas, TX

- ❖ Developed civic engagement and government workflow applications using **Java 7-8**, Spring MVC, JSP, jQuery, MySQL, REST integrations, and Jenkins deployment jobs.
- ❖ Implemented public meeting agenda and document management workflows, improving content publishing accuracy by **2%** through stronger backend validation.
- ❖ Resolved file upload failures caused by inconsistent multipart limits by standardizing Spring configuration, server settings, and user-facing error handling.
- ❖ Optimized MySQL queries for agenda search and public records filtering, reducing slow search responses by **3%** after adding indexes and query limits.
- ❖ Built REST integrations for external government systems, including authentication handling, payload validation, retry behavior, and operational logging.
- ❖ Refactored legacy JSP pages into reusable templates and JavaScript modules, improving maintainability without introducing frameworks that were not widely used then.
- ❖ Created unit tests for service-layer validation and regression-prone workflow rules, helping reduce repeated QA defects during release cycles.
- ❖ Supported production releases by reviewing logs, validating database scripts, preparing rollback steps, and coordinating fixes with senior engineers.
- ❖ Documented common deployment issues, environment variables, and troubleshooting steps so new developers could support legacy Java applications more confidently.

Junior Software Developer

Vology

Jun 2013 – Apr 2014

Gainesville, FL

- ❖ Supported internal IT service and inventory systems using **Java 7**, Spring MVC, JSP, jQuery, MySQL, Subversion, and early Jenkins build automation.
- ❖ Fixed inventory synchronization defects where missing null checks caused failed nightly imports by adding defensive validation and detailed error logging.
- ❖ Improved ticket search screens by tuning MySQL filters and pagination behavior, reducing repeated support lookup delays by **2%** for operations users.

- ❖ Created small Java service utilities for asset status updates, customer notes, and reporting exports while following senior engineers' code review guidance.
- ❖ Assisted with migration from manual deployment steps to scripted Jenkins jobs, reducing release preparation mistakes by **3%** across internal applications.

EDUCATION

Arkansas State University

Bachelor's degree, Computer Science (Sep 2009 – May 2013)
