

CRISTOFF STAN

Senior Software Engineer – C#, ASP.NET Core, Azure, AWS

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-s-692816413> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Senior .NET Backend Engineer with 10+ years delivering B2B SaaS, e-commerce, and enterprise platforms using **C#, .NET Framework 4.5–4.8, .NET Core 2.1–3.1, .NET 6–8, ASP.NET Core, SQL Server, PostgreSQL, Azure, and AWS**; specializes in secure APIs, distributed systems, event-driven architecture, legacy modernization, performance tuning, and cloud-native delivery that improve reliability, scalability, release safety, and operational efficiency.

TECHNICAL SKILLS

- **Backend Development:** C#, .NET Framework, .NET Core, ASP.NET Core, REST APIs, GraphQL, gRPC, Entity Framework Core and Dapper.
- **Architecture and Security:** Microservices, clean architecture, DDD, CQRS, event-driven systems, OAuth 2.0, JWT, RBAC and multi-tenant authorization.
- **Databases and Messaging:** SQL Server, PostgreSQL, MongoDB, Cosmos DB, DynamoDB, Redis, Kafka, RabbitMQ, Azure Service Bus and AWS SQS/SNS.
- **Cloud and DevOps:** Azure, AWS, Docker, Kubernetes, Terraform, Azure DevOps, GitHub Actions, GitLab CI and automated deployments.
- **Testing and Leadership:** Unit, integration, contract and performance testing, monitoring, code reviews, mentoring, modernization and production support.

WORK EXPERIENCE

BEVY

Senior Software Engineer

(September 2021 – June 2026)

Remote, Romania

- Architected multi-tenant backend platforms using **C#, .NET Core 3.1, later .NET 6–8, ASP.NET Core, PostgreSQL, Redis, Azure, and AWS**, establishing consistent service boundaries and production standards across several product teams.
- Modernized a tightly coupled ASP.NET application into domain-oriented **.NET services**, extracting account, billing, reporting, document, and notification capabilities through staged migration and backward-compatible APIs.
- Reduced average API response time by **38%** by eliminating Entity Framework N+1 queries, adding composite indexes, introducing projections and pagination, and caching frequently requested reference data in Redis.
- Resolved production failures caused by exhausted database pools, long-running transactions, and unbounded result sets by tuning connection lifetimes, shortening transaction scopes, and enforcing server-side query limits.

- Implemented event-driven workflows with **Azure Service Bus, Kafka, transactional outbox records, idempotent consumers, retry policies, and dead-letter queues**, preventing duplicated notifications and inconsistent downstream updates.
- Led migrations from **.NET Core 3.1 to .NET 6 and .NET 8**, replacing unsupported libraries, adopting nullable reference types, updating container images, and validating behavior through regression and load testing.
- Built secure REST and GraphQL services with **OAuth 2.0, OIDC, JWT, tenant-aware RBAC, audit logging, Key Vault, and rate limiting**, protecting customer and administrative operations across multiple tenants.
- Moved report generation, data synchronization, document processing, and notification delivery into **Hangfire and hosted background workers**, improving request latency while providing controlled retries and failure visibility.
- Strengthened delivery pipelines with **Azure DevOps, GitHub Actions, Docker, Kubernetes, Terraform, Testcontainers, and SonarQube**, automating tests, migrations, security scans, approvals, and production rollback checks.
- Mentored engineers through architecture reviews, pull-request feedback, production debugging, incident retrospectives, and release-readiness sessions that improved code consistency and backend service ownership.

Syscom Digital Software Engineer

(October 2019 – August 2021)

Remote, Romania

- Developed commerce and operations services using **C#, .NET Core 2.1, later .NET Core 3.1, ASP.NET Core Web API, SQL Server, PostgreSQL, Redis, and AWS**, supporting checkout, fulfillment, and customer-service workflows.
- Implemented payment, refund, order-tracking, inventory, and reconciliation capabilities with **Entity Framework Core, Dapper, Hangfire, and third-party REST integrations**, maintaining clear boundaries between domain and provider logic.
- Reduced recurring webhook and payment callback failures by **29%** through idempotency keys, signature validation, correlation IDs, retry-safe handlers, and structured classification of external provider errors.
- Investigated inventory mismatches caused by concurrent updates and delayed payment events, then introduced optimistic concurrency, transactional writes, compensating jobs, and scheduled reconciliation reports.
- Created provider adapters and canonical DTOs for payment, shipping, and customer-data integrations, isolating schema differences and preventing external contract changes from spreading across business services.
- Built reusable ASP.NET Core middleware for authentication, validation, request tracing, rate limiting, exception handling, and standardized API error responses across multiple application modules.
- Improved high-volume order endpoints through execution-plan analysis, targeted indexes, batched database operations, asynchronous I/O, and connection-pool tuning under realistic load tests.
- Expanded CI/CD with **Jenkins, GitLab CI, Docker, xUnit, migration validation, and staged deployments**, ensuring the same tested application artifacts moved through QA and production environments.
- Collaborated with product owners, QA engineers, support teams, and external vendors to turn unclear operational requirements into explicit API contracts, failure scenarios, and production acceptance criteria.

Soft Build Software Developer

(June 2016 – July 2019)

Remote, Romania

- Built backend services using **C#, .NET Framework 4.6–4.8, ASP.NET MVC 5, later ASP.NET Core 2.x, SQL Server, MySQL, Redis, and RabbitMQ** for commerce, booking, reporting, and administration products.
- Improved transaction and reporting performance by **37%** through SQL execution-plan analysis, targeted indexing, optimized Entity Framework queries, smaller API payloads, and Redis-backed reference-data caching.
- Developed REST APIs for inventory, appointment scheduling, pricing, reporting, authentication, and customer management using layered controller, service, repository, and domain patterns.
- Resolved production issues involving duplicate submissions, stale inventory, partial database updates, and inconsistent sessions by adding transactions, idempotency checks, validation guards, and recovery jobs.
- Moved email delivery, report generation, import processing, and external synchronization into **Hangfire background jobs**, reducing request blocking while adding retries, schedules, and failed-job diagnostics.
- Implemented authentication and authorization with **ASP.NET Identity, claims-based access, role checks, password policies, and audit records**, securing internal administration and customer-facing endpoints.
- Added **xUnit, NUnit, Moq, integration tests, and API regression suites** around pricing calculations, authentication filters, persistence repositories, and high-risk business workflows.
- Worked with senior engineers on IIS deployment, database migrations, memory diagnostics, SQL tuning, release automation, and production incident resolution across data-intensive applications.

Decima Digital Software Developer

(November 2015 – April 2016)

Remote, Estonia

- Delivered backend functionality using **C#, .NET Framework 4.5–4.6, ASP.NET MVC 5, Entity Framework 6, SQL Server, MySQL, and IIS** for customer-facing websites and administrative business tools.
- Built MVC controllers, service classes, repositories, and scheduled utilities for form processing, content retrieval, account workflows, file uploads, notifications, and operational reporting.
- Fixed production defects involving null-reference exceptions, broken server-side validation, failed file uploads, malformed requests, and missing error responses by strengthening defensive handling.
- Improved slow database operations by reviewing generated Entity Framework SQL, removing unnecessary object loading, adding indexes, and replacing repeated record loops with targeted queries.
- Integrated email, document-storage, mapping, and customer-data services through reusable adapters that normalized provider responses and isolated external configuration from domain logic.
- Participated in IIS configuration, deployment preparation, browser smoke testing, database backup checks, log review, and rollback planning for several client-facing releases.
- Collaborated with designers, project managers, and senior developers to convert business requirements into maintainable ASP.NET modules, practical data models, and realistic implementation estimates.

Borna Technology Software Developer Intern

(September 2014 – August 2015)

Tallinn, Estonia

- Assisted senior engineers with **C#, .NET Framework 4.5, ASP.NET MVC, Entity Framework 6, SQL Server, JavaScript, Git, and IIS** tasks across internal tools and client-facing applications.
- Supported backend development for MVC controllers, form handlers, database-backed administration pages, JSON endpoints, and server-side validation under guidance from experienced developers.
- Created and updated SQL queries, stored procedures, migration scripts, and test data while learning safe database-change practices and basic execution-plan investigation.

- Investigated invalid submissions, null-reference errors, database connectivity failures, and inconsistent API responses by reproducing defects and documenting reliable diagnostic steps.
- Contributed to QA checks, deployment notes, smoke tests, code reviews, and technical documentation, establishing a practical foundation in maintainable backend delivery and production support.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
September 2011 – May 2014

CERTIFICATIONS

- **AWS Certified Solutions Architect – Associate**
- **AWS Certified Developer – Associate**
- **Certified Kubernetes Application Developer — CKAD**
- **MongoDB Certified Developer Associate**
- **Professional Scrum Developer I — PSD I**

PROJECTS

Cloud-Native Operations and Transaction Platform

- Designed a multi-tenant backend platform using **.NET 8, ASP.NET Core, PostgreSQL, Redis, Azure Service Bus, AKS, and Azure API Management** for order processing, payment reconciliation, customer operations, reporting, and audit history.
- Implemented **idempotent APIs, transactional outbox publishing, optimistic concurrency, tenant-aware authorization, distributed tracing, and Testcontainers integration tests** to protect data consistency across asynchronous workflows.
- Added blue-green deployment, schema migration gates, automated rollback checks, service-level dashboards, and structured incident diagnostics to improve release safety and operational support.

Enterprise .NET Modernization Program

- Led the migration of a legacy **.NET Framework monolith** into modular **.NET 8 services**, preserving existing contracts while separating account, billing, reporting, and notification capabilities into maintainable domains.
- Resolved unsupported dependencies, inefficient Entity Framework queries, inconsistent authentication, fragile migrations, synchronous background work, and limited observability through **EF Core, OIDC, Hangfire, OpenTelemetry, and automated testing**.
- Introduced reusable service templates, centralized error handling, API versioning, health checks, secure configuration, CI quality gates, and container-based deployment standards for new backend services.
