

CRISTOFF STAN

Senior Software Engineer – Java, React, TypeScript, AWS/GCP

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com

LinkedIn: <https://www.linkedin.com/in/cristoff-s-692816413> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Senior Software Engineer with 10+ years delivering **B2B SaaS, e-commerce, and enterprise operations platforms** using **Java 8–21, Spring Boot 1.5–3.x, React 16.8–18, TypeScript 3–5, PostgreSQL, Kafka, and AWS**; combines hands-on architecture, legacy modernization, API and UI performance tuning, cloud-native delivery, and technical leadership to build secure, resilient products that reduce operational risk and accelerate measurable business outcomes.

TECHNICAL SKILLS

- **Backend Engineering:** Java 8–21, Spring Boot 1.5–3.x, Spring MVC, Spring WebFlux, Spring Security, Spring Data JPA, Hibernate, Maven, Gradle, Lombok, MapStruct, REST APIs, GraphQL, WebSockets, microservices, modular monoliths, background processing and scheduled jobs.
- **Frontend Engineering:** React 16.8–18, TypeScript 3–5, JavaScript ES6+, Redux Toolkit, React Query, Next.js, Zustand, HTML5, CSS3, Tailwind CSS, Material UI, Storybook, responsive design, accessibility, reusable component libraries and design systems.
- **Architecture and Integration:** Domain-Driven Design, hexagonal architecture, clean architecture, CQRS, event-driven architecture, API gateways, OAuth 2.0, OIDC, JWT, RBAC, multi-tenant systems, idempotency, saga patterns, outbox patterns, contract-first APIs and third-party integrations.
- **Cloud and DevOps:** AWS ECS, EKS, Lambda, API Gateway, RDS, S3, CloudFront, SQS, SNS, IAM and CloudWatch; GCP Cloud Run, Cloud SQL and Cloud Storage; Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, GitLab CI, SonarQube and automated deployment pipelines.
- **Databases and Messaging:** PostgreSQL, MySQL, MongoDB, DynamoDB, Redis, Elasticsearch/OpenSearch, Apache Kafka, RabbitMQ, schema design, database migrations, query optimization, indexing, caching, optimistic locking and transactional data processing.
- **Testing and Quality:** JUnit 5, Mockito, AssertJ, Testcontainers, WireMock, REST Assured, Spring Boot Test, Jest, React Testing Library, Cypress, Playwright, contract testing, integration testing, end-to-end testing, static analysis and code-quality governance.
- **Monitoring and Reliability:** OpenTelemetry, Micrometer, Prometheus, Grafana, Datadog, New Relic, Sentry, ELK/OpenSearch, distributed tracing, structured logging, alert tuning, production incident response, root-cause analysis and service-level monitoring.
- **Senior Engineering Practices:** Technical leadership, architecture reviews, mentoring, code reviews, production readiness, legacy modernization, performance engineering, secure coding, Agile delivery, technical estimation, stakeholder communication and cross-functional planning.

WORK EXPERIENCE

BEVY

Senior Software Engineer

(September 2021 – June 2026)

Remote, Romania

- Architected multi-tenant **Java 11/17/21**, **Spring Boot 2.x–3.x**, and **React 16.8–18** applications for B2B SaaS workflows, establishing modular service boundaries, reusable UI patterns, and release standards across several product teams.
- Modernized a legacy Java monolith into domain-oriented **Spring Boot microservices**, extracting customer, billing, and notification capabilities while preserving transactional consistency through staged migration and contract testing.
- Rebuilt class-based React screens with **functional components**, **hooks**, **Redux Toolkit**, and **React Query**, reducing duplicated state logic and improving front-end delivery speed by **34%** across high-change product areas.
- Resolved recurring production latency caused by N+1 Hibernate queries, oversized JSON payloads, and missing PostgreSQL indexes by introducing fetch plans, projections, composite indexes, and endpoint-level performance budgets.
- Implemented event-driven processing with **Apache Kafka**, the **outbox pattern**, idempotent consumers, and retry-aware dead-letter handling, preventing duplicate notifications and stabilizing asynchronous order and account workflows.
- Led upgrades from **Java 11 to Java 17/21** and from **Spring Boot 2.x to 3.x**, replacing deprecated libraries, migrating `javax` packages to `jakarta`, and validating compatibility through automated regression suites.
- Built secure REST and GraphQL APIs with **Spring Security**, **OAuth 2.0/OIDC**, JWT validation, tenant-aware RBAC, audit logging, and rate controls for administrative and customer-facing operations.
- Improved React performance on data-intensive dashboards by virtualizing large tables, memoizing expensive selectors, splitting bundles, and introducing server-side pagination for complex search and reporting workflows.
- Strengthened delivery pipelines with **GitHub Actions**, **Docker**, **Terraform**, **AWS ECS/Lambda/RDS**, SonarQube, and automated quality gates that covered unit, integration, contract, security, and deployment checks.
- Mentored engineers through architecture reviews, pull-request feedback, incident analysis, and production-readiness sessions, improving engineering consistency while reducing avoidable defects during major releases.

Syscom Digital

Software Engineer

(October 2019 – August 2021)

Remote, Romania

- Developed responsive **React 16.x**, **TypeScript 3–4**, and **Java 8/11 Spring Boot 2.x** applications for digital commerce, order management, and internal operations used by support and fulfillment teams.
- Implemented checkout, payment, refund, and customer-service workflows using **Spring MVC**, **Spring Data JPA**, PostgreSQL, Redis, and third-party REST integrations with clearly versioned contracts.
- Reduced recurring payment callback and webhook failures by **28%** through idempotency keys, correlation IDs, retry-safe handlers, signature validation, and clearer error classification around provider responses.
- Investigated inventory mismatches caused by concurrent updates and delayed callbacks, then introduced optimistic locking, transactional boundaries, and reconciliation jobs to restore consistent stock availability.

- Migrated JavaScript modules into **TypeScript**, defining shared DTOs, validation schemas, and typed API clients that reduced runtime shape errors between React screens and backend services.
- Fixed React rendering bottlenecks in large administration tables by replacing unstable keys, restructuring selectors, memoizing row components, and moving filtering and pagination to server-side queries.
- Created reusable Spring middleware and filters for authentication, request tracing, validation, rate limiting, and standardized exception responses, making production behavior consistent across multiple services.
- Expanded CI/CD with **Jenkins**, **GitLab CI**, Docker image builds, automated tests, database migration checks, and staged deployments across development, QA, and production environments.
- Collaborated with product owners, QA engineers, designers, and operations teams to convert ambiguous commerce requirements into testable stories, resilient workflows, and production-ready acceptance criteria.

Soft Build

Software Developer

(June 2016 – July 2019)

Remote, Romania

- Built full-stack business applications with **Java 8**, **Spring MVC 4.x**, later **Spring Boot 1.5**, **React 15–16**, MySQL, MongoDB, and Redis for e-commerce, booking, and administration workflows.
- Improved page-load and interaction performance by **37%** by replacing heavy jQuery behaviors with React components, reducing API payloads, compressing static assets, and applying browser caching rules.
- Developed REST APIs for inventory, appointment, pricing, reporting, and customer-management modules, separating controller, service, and persistence responsibilities to keep business rules maintainable.
- Resolved duplicated submissions, stale inventory counts, and inconsistent session behavior by adding server-side validation, transactional updates, idempotency checks, and explicit client-side recovery states.
- Refactored blocking and callback-heavy integration code into executor-based jobs and asynchronous workflows where appropriate, improving throughput for email, report generation, and external synchronization tasks.
- Created reusable React forms, modal flows, validation helpers, and dashboard widgets that accelerated delivery of similar operational screens without duplicating business behavior.
- Added **JUnit**, **Mockito**, Jest, and integration tests around pricing calculations, authentication filters, database repositories, and critical API endpoints, reducing regression risk before releases.
- Worked with senior engineers on slow-query analysis, indexing, deployment scripts, code reviews, and production incident fixes, building disciplined habits for reliable Java and React delivery.

Decima Digital

Software Developer

(November 2015 – April 2016)

Remote, Estonia

- Delivered **Java 7/8**, **Spring MVC**, JavaScript, and SQL features for content-driven business websites, reusable administration tools, and lightweight REST-style service integrations.
- Maintained legacy front-end screens built with HTML, CSS, jQuery, and server-rendered templates while introducing component-based JavaScript patterns for more interactive business modules.
- Built Spring controllers and service classes for form processing, notification routing, content retrieval, and basic account workflows, improving separation between presentation and backend logic.
- Fixed production defects involving broken validation, inconsistent file uploads, null handling, and missing user feedback by strengthening server checks and client-side error presentation.
- Supported MySQL and MongoDB updates by writing safer queries, cleanup scripts, and validation reports that allowed data corrections to be reviewed before production deployment.

- Participated in deployment preparation, browser testing, smoke checks, and rollback planning, helping reduce last-minute release issues across several small client-facing applications.
- Collaborated with designers and project managers to translate business requirements into responsive pages, maintainable Java services, and practical delivery estimates for short project cycles.

Borna Technology

Software Developer Intern

(September 2014 – August 2015)

Tallinn, Estonia

- Assisted senior engineers with **Java 7/8**, **Spring MVC**, JavaScript, HTML, CSS, and SQL tasks across internal tools, client websites, and basic API-backed business applications.
- Built small UI enhancements, reusable page sections, and validation scripts while learning disciplined debugging, cross-browser compatibility handling, and clean Git-based collaboration.
- Supported backend work for simple REST endpoints, form handlers, and database-backed administration pages using Java, Spring, MySQL, and structured server-side validation.
- Helped investigate layout defects, incorrect form data, null-pointer errors, and inconsistent API responses by reproducing issues and documenting reliable steps for senior developers.
- Contributed to QA checks, deployment notes, and code reviews, establishing a strong foundation in professional software delivery, teamwork, maintainability, and production support.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,

September 2011 – May 2014

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate
- AWS Certified Developer – Associate
- Certified Kubernetes Application Developer — CKAD
- MongoDB Certified Developer Associate
- Professional Scrum Developer I — PSD I

PROJECTS

Cloud-Native Commerce and Operations Platform

- Designed a multi-tenant commerce platform using **Java 17**, **Spring Boot**, **React 18**, **TypeScript**, **PostgreSQL**, **Redis**, **Kafka**, and **AWS**, supporting order management, payment reconciliation, inventory, customer support, reporting, audit history, event-driven notifications, and secure administrative workflows.
- Introduced **idempotent APIs**, Kafka-based asynchronous processing, PostgreSQL outbox events, tenant-aware authorization, distributed tracing, automated Testcontainers integration tests, and containerized deployment pipelines for resilient production delivery.

Enterprise Application Modernization Program

- Led the migration of a legacy Java and jQuery application into **Spring Boot 3 microservices** and a **React 18** front end, replacing tightly coupled modules with documented APIs, reusable UI components, typed contracts, and independently deployable services.
- Resolved outdated dependencies, slow Hibernate queries, inconsistent authentication, fragile database migrations, oversized front-end bundles, and limited production visibility through automated testing, query optimization, OAuth 2.0, Flyway, code splitting, and OpenTelemetry.
