SUMMARY

Senior Full-Stack Engineer with **10+ years** building **React** web platforms and **Python** / Node backends for high-traffic, customer-facing products. Strong in **API-first** design, **event-driven** systems, and **cloud-native** delivery across **AWS (primary)** with hands-on experience in **Azure** and **GCP**. Known for shipping **secure**, **observable**, and **scalable** systems using **React**, **TypeScript**, **Python**, **PostgreSQL**, **Redis**, **Kafka**, **Kubernetes**, and modern **CI/CD** practices.

SKILLS

- **Frontend** — **React**, **TypeScript**, component architecture, design systems, state patterns, performance profiling, accessibility, **Cypress**, **Playwright**
- **Backend & APIs** — **Python**, Node.js, TypeScript, **REST API** design, background processing, gRPC, WebSockets, service decomposition, caching strategies, structured error models
- **Data, Messaging & Search** — Relational: **PostgreSQL**, **MySQL**, **SQL Server** | NoSQL: **Redis**, **MongoDB**, **DynamoDB** | Queues/streams: **AWS SQS/SNS**, **Kafka**, **RabbitMQ** | Search: **Elasticsearch**, **OpenSearch** | Analytics: **Redshift**, **BigQuery**
- **Cloud & DevOps** — **AWS (primary)**: **EKS**, **ECS**, **EC2**, **Lambda**, **API Gateway**, **S3**, **CloudFront**, **RDS**, **DynamoDB**, **ElastiCache**, **EventBridge**, **Step Functions**, **IAM** | **Azure**: **AKS**, App Service, Azure SQL, Service Bus, Key Vault, Application Insights | **GCP**: **GKE**, Cloud Run, Pub/Sub, Cloud Storage, **BigQuery** | **Docker**, **Kubernetes**, **Helm**, **Argo CD**, **GitOps** | **Terraform**, **CloudFormation** | **CI/CD**: **GitHub Actions**, **GitLab CI**, **Jenkins**, **Azure DevOps**, **CircleCI**
- **Observability, Quality & Security** — **OpenTelemetry**, **Datadog**, **Prometheus**, **Grafana**, **ELK/EFK**, **CloudWatch**, structured logging | Testing: **Jest**, **Mocha**, **Chai**, **React Testing Library**, **Cypress**, **Playwright**, **API contract tests** | Security: **OAuth2**, **OpenID Connect**, **JWT**, **Okta**, **Auth0**, **AWS Cognito**, rate limiting, **RBAC/ABAC**, **audit logging**

PROFESSIONAL EXPERIENCE

Senior Software Engineer

SumatoSoft

Boston, MA | Feb 2020 – Oct 2025 (Remote)

- ✓ Built a multi-tenant **React** platform with reusable UI patterns, predictable navigation flows, and performance tuning to reduce costly re-renders in high-traffic workflows.
- ✓ Led backend delivery across **Python** services and Node APIs, defining clean domain boundaries, consistent error contracts, and supportable failure modes for production operations.
- ✓ Designed and maintained **REST APIs** behind **API Gateway**, implementing pagination, filtering, idempotency keys, and consistent response envelopes for external integrations.
- ✓ Implemented real-time collaboration using **WebSockets**, adding reconnect resilience, backpressure handling, and safe server-side fan-out controls.
- ✓ Delivered data-heavy features backed by **PostgreSQL** on **RDS**, improving schema design, indexes, and query plans to protect p95 latency during peak usage.
- ✓ Modeled cross-service persistence using **MySQL**, **SQL Server**, and **MongoDB** for partner-facing modules, standardizing migrations and query patterns for reliability.
- ✓ Introduced caching and throttling with **Redis** and **ElastiCache**, implementing invalidation strategies and rate-limit counters aligned to abuse prevention.
- ✓ Built event-driven processing with **Kafka** and **AWS SQS/SNS**, standardizing **DLQ** behavior, message deduplication, and replay-safe consumers for long-running workflows.
- ✓ Implemented search experiences with **Elasticsearch** and **OpenSearch**, tuning analyzers, mappings, and query strategies to improve relevance while keeping query cost stable.
- ✓ Integrated analytics exports into **Redshift** and **BigQuery**, shaping event schemas and building reliable pipelines for downstream reporting and product insights.
- ✓ Deployed services on **EKS** using **Docker**, **Helm**, and **Argo CD**, adopting **GitOps** promotions and progressive rollouts to reduce production risk.

- ✓ Managed infrastructure with **Terraform** and **CloudFormation**, enforcing environment separation, **IAM** least privilege, and reproducible service dependencies.
- ✓ Established end-to-end observability with **OpenTelemetry**, publishing metrics/traces to **Datadog**, **Prometheus**, and **Grafana**, plus centralized logs in **ELK/EFK** and alerts in **CloudWatch**.
- ✓ Hardened security using **OAuth2/OIDC**, **JWT**, and fine-grained **RBAC/ABAC**, adding **audit logging** for privileged actions and service-to-service access controls.
- ✓ Built CI/CD pipelines with **GitHub Actions** and Jenkins-style workflows to run tests, build images, publish artifacts, and gate deployments with quality checks and release policies.

Software Engineer

Saritasa

Orange County, CA | Jun 2016 – Jan 2020 (Remote)

- ✓ Delivered customer-facing **React** SPAs focused on UX consistency, component reuse, accessibility improvements, and fast initial loads for workflow-heavy applications.
- ✓ Built backend capabilities in **Python** for automation and data validation, pairing them with Node API layers to keep integrations reliable and maintainable.
- ✓ Implemented API request validation and standardized error responses, improving supportability with consistent correlation IDs and structured logging fields.
- ✓ Built async workflows using **RabbitMQ** workers, enforcing retries, **DLQs**, and idempotent processing for invoice, notification, and export pipelines.
- ✓ Designed relational models in **PostgreSQL** and **MySQL**, improving migration discipline and adding indexes to stabilize reporting-heavy screens.
- ✓ Added caching strategies using **Redis**, reducing database load and smoothing performance during burst traffic and seasonal spikes.
- ✓ Implemented search-driven screens with **Elasticsearch**, supporting faceted filtering, relevance tuning, and stable indexing for admin tooling.
- ✓ Deployed containerized services using **Docker** and **Kubernetes**, enabling consistent environments from development through production releases.
- ✓ Automated delivery with **GitHub Actions** and GitLab CI patterns, gating merges on unit tests and smoke journeys for key user flows.
- ✓ Integrated AWS and Azure services where needed (including **AKS** / App Service / Azure SQL patterns), ensuring secrets handling, secure connectivity, and repeatable deployments.
- ✓ Added operational dashboards using **Prometheus** and **Grafana**, tracking latency, throughput, error rates, and queue backlogs with actionable alerts.
- ✓ Enforced auth and enterprise identity patterns using **OAuth2/OIDC**, **JWT**, and **Okta/Auth0/Cognito**-style integrations, including rate limiting and access audits.
- ✓ Supported data movement into **DynamoDB** for high-throughput access paths and into **BigQuery** for analytics consumers, keeping schemas consistent and observable.

Software Developer

NIX United

Tampa, FL | Jan 2011 – May 2016 (Remote)

- ✓ Built early web product modules that evolved into component-based UI patterns, improving maintainability, reuse, and team delivery speed.
- ✓ Developed backend services and integration utilities, focusing on reliability, clear boundaries, and predictable request/response handling.
- ✓ Created **Python** scripts for imports, validations, scheduled jobs, and operational tooling that reduced manual effort and improved data correctness.
- ✓ Implemented relational reporting and transactional workflows using **SQL Server** and **MySQL**, optimizing joins, indexes, and query plans for stable performance.
- ✓ Introduced caching patterns using **Redis**-style approaches to reduce repeated computations and protect databases during high-load windows.
- ✓ Implemented asynchronous processing using queue-based workers and early messaging patterns, improving responsiveness for long-running batch tasks.
- ✓ Added search indexing patterns aligned with **Elasticsearch** concepts, improving discoverability and reducing support time for investigations.
- ✓ Supported deployments with **Docker**-based environment standardization, reducing “works on my machine” failures and speeding up onboarding.

- ✓ Added practical monitoring and structured logging, improving incident triage and enabling faster rollbacks when needed.
- ✓ Collaborated with QA and product to translate requirements into testable deliverables, reducing regressions and improving release confidence.
- ✓ Contributed to security foundations with input validation, least-privilege access patterns, and early role-based authorization rules.

Software Developer Intern Exquisite Software

Scottsdale, AZ | Oct 2010 – Dec 2010 (On-Site)

- ✓ Built small product enhancements using **JavaScript** and server-rendered web patterns, focusing on clean, reviewable changes.
- ✓ Assisted with **REST-style** endpoint integration and request/response handling, improving consistency across UI-to-backend interactions.
- ✓ Implemented UI fixes and lightweight interactive components, improving usability while keeping pages responsive and maintainable.
- ✓ Wrote data import and validation scripts to clean and normalize datasets before storing them in relational systems.
- ✓ Supported SQL-backed reporting tasks using **SQL Server** and **MySQL** patterns, ensuring correct joins, filters, and stable query performance.
- ✓ Helped maintain build and deployment checklists, improving repeatability across local and shared test environments.
- ✓ Added basic logging and error handling patterns, making failures easier to detect and diagnose during QA testing.
- ✓ Contributed to manual testing and bug reproduction, documenting steps clearly so fixes could be verified and shipped safely.
- ✓ Collaborated with senior engineers through code reviews, applying feedback to improve **code quality** and delivery confidence.

EDUCATION

Bachelor's Degree of Science in Computer Science

California State University – Dominguez Hills (2006 – 2010)

- ✓ Completed a CS curriculum with strong foundations in **algorithms**, **databases**, and **software engineering**, and applied the coursework through practical projects emphasizing real-world system building.

PROJECTS

React + Python Multi-Tenant Operations Console

- ✓ Built a multi-tenant **React** admin console with role-aware navigation, reusable UI components, and performance tuning for large tables and filter-heavy workflows.
- ✓ Implemented backend services in **Python** with strict request validation, consistent error contracts, and secure token-based access using **OAuth2/OIDC** and **JWT**.
- ✓ Backed critical workflows with **PostgreSQL** and **Redis**, applying indexing strategies, caching, and safe invalidation to protect p95 latency under load.
- ✓ Added **OpenTelemetry** tracing across frontend-to-backend flows, publishing metrics to **Prometheus/Grafana** and alerts to improve incident response.

Event-Driven Processing & Search Platform

- ✓ Built async workers using **Kafka** and **AWS SQS/SNS** for durable processing, with retries, **DLQs**, and idempotent consumers for safe replays.
- ✓ Implemented indexing and retrieval with **Elasticsearch/OpenSearch**, supporting faceted filtering, relevance tuning, and operational visibility into indexing health.
- ✓ Deployed on **EKS** using **Docker**, **Helm**, and **Argo CD**, managing infrastructure with **Terraform/CloudFormation** and enforcing **IAM** least privilege.
