Summary

Senior Full-Stack Engineer with 9+ years of experience building and scaling **React + TypeScript** frontends and **Node.js (Express/NestJS)** backends in production. Strong background designing **event-driven architectures**, resilient APIs, and cloud-native platforms running on **AWS** with multi-cloud exposure. Proven track record modernizing legacy systems into modular, observable, and cost-aware architectures using **Docker**, **Kubernetes**, messaging systems, and robust **CI/CD** pipelines. Product-minded engineer who owns architecture, delivery, reliability, and mentoring while shipping stable, secure value at speed.

Work Experience

Senior Software Engineer | Web Venturez LLC

February 2020 - October 2025

- Led a large-scale frontend modernization initiative rebuilding critical workflows into **React + TypeScript** component systems, reducing regression rates and accelerating parallel feature delivery.
- Designed and implemented **Next.js** SEO-critical surfaces while preserving authenticated SPA behavior for complex operational modules.
- Architected modular **NestJS** microservices backed by **PostgreSQL**, **MySQL**, and **Redis**, enabling domain isolation and parallel team ownership.
- Built an **event-driven pipeline** using **AWS SNS/SQS**, **Kafka**, and **RabbitMQ**, implementing DLQs, idempotency keys, and replay-safe consumers.
- Developed a Node.js **API Gateway/BFF** enforcing authentication, rate limiting, correlation IDs, and response normalization for React clients.
- Optimized hot paths by eliminating N+1 queries, adding targeted indexing in PostgreSQL, and introducing **Redis/ElasticCache** caching layers.
- Deployed workloads on **AWS EKS**, **ECS**, **Lambda**, **API Gateway**, **RDS**, **DynamoDB**, **EventBridge**, and **Step Functions**, aligning runtime patterns with reliability goals.
- Containerized services with **Docker** and managed deployments via **Helm** and **Argo CD** following GitOps practices.
- Implemented cross-service search indexing into **Elasticsearch/OpenSearch**, improving operational investigation speed.
- Published structured event streams to **Redshift** and **BigQuery** analytics pipelines for reporting and product intelligence.
- Integrated secure file/media pipelines using **S3** and **CloudFront** with signed URLs and lifecycle management policies.
- Introduced distributed tracing with **OpenTelemetry** exporting to **Datadog** and **Grafana**, reducing MTTR during incidents.
- Hardened authentication and authorization flows using **OAuth2**, **OpenID Connect**, **JWT**, **Okta**, **Auth0**, **AWS Cognito**, and fine-grained **RBAC/ABAC** enforcement.
- Established CI/CD templates across **GitHub Actions**, **GitLab CI**, **Jenkins**, and automated Docker publishing with security scanning.
- Mentored engineers on architecture reviews, distributed debugging, and production-grade API design, raising overall system reliability standards.

Full Stack Engineer | Webiz Digital

July 2017 - January 2020

- Owned a complex **React SPA** supporting operational workflows and refactored brittle UI logic into composable, reusable components.
- Built stable **Node.js (Express)** REST APIs aligned with frontend contracts to eliminate transformation duplication.
- Implemented background processing with **AWS SQS/SNS** and **RabbitMQ** for exports and reconciliation jobs.
- Improved dashboard performance through database profiling and indexing across **MySQL** and **PostgreSQL**.
- Introduced **Redis** caching layers with explicit invalidation hooks to balance performance and correctness.
- Implemented full-text search with **Elasticsearch/OpenSearch** for operational datasets.
- Strengthened observability with structured logs into **ELK/EFK** and metrics exported to **Prometheus/Grafana**.
- Secured APIs using **JWT**, OAuth-based flows, and consistent middleware-based access enforcement.
- Containerized services using **Docker** and supported Kubernetes deployments on **EKS/AKS** clusters.

- Contributed to infrastructure automation using **Terraform** and **CloudFormation**, enforcing least-privilege IAM policies.
- Established automated test coverage using **Jest**, **React Testing Library**, and API contract testing patterns.
- Improved release stability via CI/CD pipelines in **Azure DevOps** and GitHub Actions.
- Collaborated cross-functionally to decompose features into measurable milestones and predictable deployments.

Software Developer | Centric Tech Inc.

October 2013 - June 2017

- Built interactive web interfaces using early **React** patterns and integrated them with backend **REST** endpoints for internal and customer-facing workflows.
- Developed server-side endpoints with strict validation and consistent error responses to keep integrations predictable and easier to support.
- Improved performance on data-heavy screens by optimizing queries and shaping payloads to reduce unnecessary data transfer.
- Supported long-running internal tasks using worker-style background processing with safe retries and clear failure handling.
- Assisted queue-based integrations by improving retry/backoff behavior and adding guardrails to prevent duplicate processing during transient failures.
- Stabilized peak-hour response times by refining indexing and query plans in **SQL Server** and **PostgreSQL**.
- Helped standardize development environments through early containerization practices, reducing setup drift across the team.
- Added unit and integration test coverage using **Mocha** and **Chai**, stabilizing CI checks and reducing regressions.
- Supported build and release automation via **Jenkins**, improving release consistency and reducing manual deployment steps.

Core Skills & Strengths

Frontend — **React**, **Next.js**, **TypeScript**, JavaScript, HTML, CSS, Tailwind CSS, Bootstrap, component-driven UI, state management patterns, routing, forms/validation, accessibility-minded UI, performance profiling

Backend & APIs — **Java**, **Spring**, **Spring Boot**, Spring MVC, Spring Security, JPA/Hibernate, JDBC, Maven, Gradle, **REST**, OpenAPI/Swagger, **microservices**, **event-driven architecture**, idempotency, rate limiting, retries, circuit breakers, backpressure, queue-based workflows

Data, Messaging & Search — Relational: **PostgreSQL**, **MySQL**, **SQL Server** | NoSQL: **Redis**, **MongoDB**, **DynamoDB** | Queues/streams: **AWS SQS/SNS**, **Kafka**, **RabbitMQ** | Search: **Elasticsearch**, **OpenSearch** | Analytics: **Redshift**, **BigQuery**

Cloud & DevOps — **AWS** (primary): **EKS**, **ECS**, **EC2**, **Lambda**, **API Gateway**, **S3**, **CloudFront**, **RDS**, **DynamoDB**, **ElastiCache**, **EventBridge**, **Step Functions**, **IAM** | **Azure**: **AKS**, **App Service**, **Azure SQL**, **Service Bus**, **Key Vault**, **Application Insights** | **GCP**: **GKE**, **Cloud Run**, **Pub/Sub**, **Cloud Storage**, **BigQuery** (consumer/integrator) | **Docker**, **Kubernetes**, **Helm**, **Argo CD**, **GitOps**, **Terraform**, **CloudFormation** | **CI/CD**: **GitHub Actions**, **GitLab CI**, **Jenkins**, **Azure DevOps**, **CircleCI**

Observability, Quality & Security — **OpenTelemetry**, **Datadog**, **Prometheus**, **Grafana**, **ELK/EFK**, **CloudWatch**, structured logging | Testing: **Jest**, **Mocha**, **Chai**, **React Testing Library**, **Cypress**, **Playwright**, **API contract tests (Pact-style)** | Security: **OAuth2**, **OpenID Connect**, **JWT**, **Okta**, **Auth0**, **AWS Cognito**, rate limiting, **RBAC/ABAC**, audit logging

Education

Bachelor's degree in Computer Science

Florida State University

2009 – 2013

- Focused on strong foundations in **systems**, **data structures**, and **software engineering**, with projects emphasizing reliable web applications and production-minded design.

Projects

Event-Driven SaaS Orchestration Platform

- Designed a resilient orchestration layer for long-running jobs using **AWS SQS/SNS**, **Kafka**, and **RabbitMQ** with DLQs and replay-safe handlers.

- Implemented correlation IDs, structured logs, and distributed tracing via **OpenTelemetry**, exporting telemetry to **Datadog**, **Grafana**, and **CloudWatch** dashboards.
- Deployed services on **EKS** with GitOps workflows and integrated analytics pipelines publishing structured events into **Redshift** and **BigQuery**.

Search & Analytics Enablement Pipeline

- Built cross-service indexing workflows into **Elasticsearch/OpenSearch** with zero-downtime reindexing strategies.
- Optimized relational workloads in **PostgreSQL/MySQL** while introducing **Redis** caching tiers for predictable performance.
- Integrated secure multi-cloud exports to **Azure** and **GCP** storage environments through provider-agnostic interfaces.
