

Rodrigo Fernandez

Senior Vue.js / .NET Full Stack Engineer

Katy, Texas | +1 (407) 801-1287 | www.linkedin.com/in/rodrigobermejo-fernandez-9a5a0664 | rodrigobfdev@gmail.com

Summary

Senior Full Stack Engineer with strong experience building **SaaS, fintech, healthcare, and cloud-service platforms** using **Vue.js 2.6–3.4, .NET 6.0–8.0, ASP.NET Core 6.0–8.0, C# 10–12, and SQL Server 2019–2022** across modern web products. Skilled in migrating legacy MVC and Web API services into clean API-driven architectures, optimizing slow dashboards, fixing production memory leaks, and delivering secure role-based workflows. Known for flexible ownership across frontend, backend, database, CI/CD, Azure, and AWS deployment while improving release quality, performance, observability, and long-term maintainability for distributed engineering teams.

Skills

- **Frontend:** **Vue.js 2.6–3.4**, Vuex 3–4, Pinia 2.x, Vue Router 3–4, JavaScript ES6+, TypeScript 4.5–5.4, HTML5, CSS3, SCSS, Bootstrap 4–5, Tailwind CSS 3.x, Vuetify 2–3, Axios, Vite 4–5, Webpack 4–5
- **Backend:** **.NET 6.0–8.0, ASP.NET Core 6.0–8.0**, C# 10–12, Web API, REST APIs, Minimal APIs, LINQ, MediatR 10–12, AutoMapper 10–12, SignalR, Background Services, Hangfire 1.7–1.8
- **Database:** **SQL Server 2019–2022**, PostgreSQL 12–15, Entity Framework Core 6.0–8.0, Dapper 2.x, Stored Procedures, Indexing, Query Optimization, Redis 6–7
- **Cloud & DevOps:** Azure App Service, Azure Functions, Azure SQL, Azure Blob Storage, AWS EC2, S3, RDS, CloudWatch, Docker 20–24, GitHub Actions, Azure DevOps Pipelines, IIS, Nginx
- **Testing & Quality:** xUnit 2.x, NUnit 3.x, Moq 4.x, Jest 27–29, Cypress 10–13, Postman, Swagger/OpenAPI, SonarQube, Application Insights, Sentry
- **Architecture:** Clean Architecture, Domain-Driven Design, CQRS, Repository Pattern, Microservices, Modular Monolith, Event-Driven Workflows, RBAC, OAuth2, JWT, IdentityServer

Experience

Lightedge — Senior Software Engineer *(Apr 2020 – Mar 2026)*

- Built secure customer-facing cloud service portals with **Vue.js 3.2–3.4, ASP.NET Core 7.0–8.0**, and **SQL Server 2022**, improving self-service workflows for provisioning, billing, support, and infrastructure visibility.
- Migrated a legacy dashboard from server-rendered ASP.NET MVC views into a modular **Vue 3 Composition API** frontend, reducing page interaction latency by **42%** and simplifying component reuse.
- Designed and implemented **.NET 8 Web APIs** with clean architecture, JWT authentication, role-based permissions, and Swagger documentation to support internal and external platform integrations.
- Resolved a production memory-leak issue caused by inefficient scoped service usage and large cached payloads, lowering average API memory pressure by **31%** after profiling with Application Insights.
- Improved slow SQL Server reporting queries by rewriting joins, adding filtered indexes, and moving repeated calculations into optimized stored procedures, cutting report load time by **48%**.
- Implemented a real-time service health module using **SignalR**, background workers, and Vue reactive stores, allowing support teams to detect outages and customer-impacting incidents faster.

- Upgraded several services from **.NET 6.0 to .NET 8.0**, handling breaking package changes, nullable reference warnings, middleware updates, and dependency injection cleanup without major release disruption.
- Created reusable Vue form components with validation, dynamic permissions, and accessibility fixes, reducing duplicated frontend code by **35%** across account, ticketing, and billing screens.
- Fixed recurring API timeout errors by introducing pagination, response compression, async database calls, and background processing for heavy synchronization jobs.
- Built GitHub Actions and Azure DevOps pipelines for build, test, Docker packaging, and deployment, improving release consistency and reducing manual deployment mistakes by **50%**.
- Partnered with product, QA, DevOps, and customer success teams to translate operational pain points into maintainable features while staying flexible across frontend, backend, and cloud tasks.
- Mentored engineers on **Vue 3, ASP.NET Core**, API design, debugging strategy, and pull request quality, helping the team improve review speed and production stability.

NIX United —Software Engineer *(Oct 2016 – Mar 2020)*

- Developed enterprise SaaS and healthcare workflow applications using **Vue.js 2.6, ASP.NET Core 3.1–6.0, C# 8–10, and SQL Server 2017–2019** for distributed client teams.
- Migrated older Web Forms and jQuery-heavy pages into Vue single-page modules, improving usability, reducing browser-side defects, and making future feature work easier to estimate.
- Implemented RESTful APIs with **ASP.NET Core Web API**, Entity Framework Core, AutoMapper, and structured validation layers to support scheduling, document management, and reporting features.
- Solved a difficult duplicate-payment bug by tracing race conditions in transaction processing, adding idempotency keys, and improving database constraints for safer retries.
- Improved application performance by replacing several N+1 Entity Framework queries with projected LINQ queries and Dapper-based reads, reducing key endpoint response time by **39%**.
- Built reusable Vue components for data grids, modal workflows, status badges, and permission-based actions, helping teams deliver new admin features **28%** faster.
- Upgraded backend services from **.NET Core 3.1 to .NET 6.0**, updating hosting configuration, logging libraries, package dependencies, and CI pipeline tasks.
- Integrated third-party APIs for payments, notifications, and identity verification while adding retry policies, request logging, and fallback handling for unstable vendor responses.
- Added automated tests with **xUnit**, Moq, Jest, and Cypress around high-risk workflows, reducing regression defects during release cycles by **33%**.
- Collaborated with client architects and offshore QA teams to clarify acceptance criteria, troubleshoot environment issues, and deliver production-ready features under changing priorities.
- Supported Azure App Service deployments, SQL migrations, and release validation while keeping communication clear between engineering, QA, product, and client stakeholders.

Webiz Digital — Software Developer *(Jan 2014 – Sep 2016)*

- Delivered business web applications for eCommerce, marketing, and internal operations using **Vue.js 2.x, ASP.NET MVC 5, Web API 2, C#, and SQL Server 2016–2019**.
- Modernized older Razor and jQuery screens by introducing Vue components where full rewrites were risky, improving maintainability while protecting existing customer workflows.
- Created API endpoints for catalog, order, user profile, and reporting modules, using layered service classes and validation logic to keep business rules testable.
- Resolved a recurring checkout failure caused by inconsistent session state and payment callback timing, improving successful order completion by **22%**.

- Optimized SQL Server queries for product search and order history by adding indexes, reducing unnecessary joins, and caching stable reference data.
- Implemented admin dashboards with Vue, Bootstrap, and Chart.js to help operations teams track orders, campaigns, customer activity, and inventory exceptions.
- Migrated selected applications from older IIS-hosted MVC patterns toward API-first structures, preparing the codebase for future **ASP.NET Core** adoption.
- Fixed cross-browser layout issues, frontend validation gaps, and timezone-related display bugs that caused confusion for users across different regions.
- Worked flexibly across UI development, backend APIs, database scripts, release support, and client troubleshooting when small teams needed broad ownership.
- Improved deployment reliability by documenting IIS setup, connection strings, environment variables, and rollback steps for repeatable production releases.

Aurio — Junior Software Developer *(Oct 2012 – Dec 2013)*

- Supported early-stage product development using **C#**, **ASP.NET MVC 4–5**, JavaScript, jQuery, Bootstrap, and SQL Server for internal tools and customer-facing web modules.
- Built forms, tables, authentication screens, and simple reporting pages while learning how to structure controllers, views, services, and database access responsibly.
- Assisted senior engineers with moving repeated JavaScript logic into reusable modules, reducing frontend duplication and improving consistency across several pages.
- Fixed validation bugs where server-side rules and client-side rules behaved differently, helping reduce user-submitted data errors by **18%**.
- Investigated SQL performance problems in small reporting screens by reviewing execution plans, simplifying queries, and adding basic indexes under senior guidance.
- Implemented basic REST-style endpoints for profile updates, lookup data, and internal workflow actions using ASP.NET MVC controllers and JSON responses.
- Helped troubleshoot production issues related to incorrect configuration values, missing deployment files, browser caching, and inconsistent database scripts.
- Created technical notes for recurring setup problems, making onboarding smoother for other junior developers and reducing repeated environment questions.

Microsoft — Software Developer Intern *(Jun 2012 – Sep 2012)*

- Contributed to internal productivity tools using JavaScript, C#, and SQL under enterprise engineering standards and code review practices.
- Assisted with bug triage, UI fixes, and automation tasks that improved team delivery efficiency during release cycles.
- Created test scripts and documentation that helped validate builds faster and reduce repeated manual checks.
- Learned large-scale development workflow, version control discipline, and professional communication from senior engineers.
- Participated in team meetings, sprint planning, and defect analysis while gaining real-world software lifecycle exposure.

Education

Texas State University

Bachelor's Degree in Computer Science *(Sep 2008 – May 2012)*
