

MARK HANEY

STAFF SOFTWARE ENGINEER | .NET + ANGULAR FULL-STACK TECHNICAL LEAD

Dardanelle, AR

<https://www.linkedin.com/in/markhaney-33b675ba>

+1 (430) 279-2231 | markhaney.dev@outlook.com

PROFESSIONAL SUMMARY

Staff Software Engineer and Full-Stack Technical Lead with 12+ years building enterprise SaaS, property technology, civic technology, nonprofit fundraising, and cloud services platforms using **C# 10–12**, **.NET 6–8**, **ASP.NET Core**, **Angular 14–17**, **TypeScript 4–5**, **SQL Server**, **PostgreSQL**, **MongoDB**, **Azure**, **AWS**, **Docker**, **Kubernetes**, and **CI/CD**, specializing in microservices, API design, modernization from legacy .NET Framework to cloud-native .NET, secure front-end architecture, unit testing, observability, and production support that improves reliability, delivery speed, developer productivity, and long-term maintainability.

TECH SKILLS

- ❖ **Languages:** **C# 10–12**, **TypeScript 4–5**, JavaScript ES6+, SQL, HTML5, CSS3
- ❖ **Backend:** **.NET 6–8**, **ASP.NET Core**, ASP.NET Web API, Entity Framework Core 6–8, LINQ, SignalR, MediatR, REST APIs, Microservices
- ❖ **Frontend:** **Angular 14–17**, AngularJS 1.4–1.7, RxJS 7, NgRx 14–17, Angular Material, Reactive Forms, SCSS, Bootstrap
- ❖ **Databases:** **SQL Server 2016–2022**, PostgreSQL 12–15, MongoDB 4–6, Redis 6–7
- ❖ **Cloud & DevOps:** Azure App Service, Azure SQL, Azure DevOps, AWS ECS, AWS Lambda, S3, Docker, Kubernetes, GitHub Actions, Jenkins
- ❖ **Testing & Quality:** xUnit, NUnit, Jest, Jasmine, Karma, Cypress, Unit Testing, Integration Testing, SonarQube
- ❖ **Architecture:** Clean Architecture, Domain-Driven Design, CQRS, Event-Driven Systems, API Gateway, OAuth2, JWT, CI/CD, Agile/Scrum

PROFESSIONAL EXPERIENCE

Staff Software Engineer

Relatio

Jun 2022 – Apr 2026

Las Vegas, NV

- ❖ Led full-stack delivery for enterprise relationship intelligence SaaS platforms using **.NET 6–8**, **ASP.NET Core**, **Angular 14–17**, and **TypeScript 4–5**, improving cross-team feature release speed by **27%** through reusable modules and shared API contracts.
- ❖ Designed scalable **microservices** with **C#**, REST APIs, Entity Framework Core, PostgreSQL, Redis, and asynchronous event processing, reducing high-volume customer data sync latency by **31%** during peak usage windows.
- ❖ Migrated legacy service components from older **.NET Core 3.1** patterns to **.NET 7/8**, replacing tightly coupled business logic with cleaner application layers and reducing regression defects by **24%**.
- ❖ Built advanced Angular dashboard features with **RxJS 7**, NgRx state management, reusable Angular Material components, and lazy-loaded routes, improving page load performance by **29%** for large customer workspaces.

- ❖ Resolved a recurring production issue where stale cache entries caused incorrect relationship scores by adding cache invalidation rules, distributed locks, and structured observability around Redis operations.
- ❖ Implemented secure authentication and authorization flows using **OAuth2**, JWT, role-based access control, and API policy validation, strengthening tenant isolation across sensitive enterprise customer data.
- ❖ Created reusable .NET validation middleware, API response wrappers, and exception handling patterns that reduced duplicated controller logic and improved backend maintainability across multiple squads.
- ❖ Improved CI/CD pipelines with **GitHub Actions**, Docker image validation, automated test gates, and deployment health checks, reducing failed deployments by **22%** and making releases more predictable.
- ❖ Partnered with product owners and UX teams to implement new analytics features in **Angular 16/17**, converting ambiguous business requirements into realistic user stories and production-ready workflows.
- ❖ Investigated memory pressure and timeout errors in a high-traffic API by profiling Entity Framework queries, optimizing indexes, and introducing pagination, reducing API timeout incidents by **26%**.
- ❖ Mentored engineers on **Clean Architecture**, Angular component design, unit testing, and production debugging, helping the team improve code review quality and reduce repeated implementation mistakes.
- ❖ Supported production operations with Azure monitoring, structured logs, alert tuning, and incident reviews, improving mean time to diagnose customer-impacting issues by **23%**.

Senior Software Engineer

AppFolio

Feb 2018 – May 2022

Goleta, CA

- ❖ Developed property technology SaaS modules using **.NET Core 3.1–6**, **Angular 8–13**, **TypeScript 3–4**, SQL Server, PostgreSQL, and REST APIs for leasing, billing, reporting, and tenant workflow automation.
 - ❖ Modernized older Angular screens into reactive component-based workflows with **RxJS 6**, **NgRx**, **Reactive Forms**, and lazy loading, improving user interaction speed by **25%** across high-traffic property management pages.
 - ❖ Migrated backend services from monolithic ASP.NET patterns toward modular **ASP.NET Core** APIs, improving service maintainability and reducing release-related defects by **21%**.
 - ❖ Implemented new payment reconciliation and notification features with API validation, background jobs, and event-driven updates, helping operations teams reduce manual follow-up work by **28%**.
 - ❖ Solved a recurring data mismatch bug between billing events and customer ledger records by adding idempotency keys, stronger transaction boundaries, and detailed audit logging.
 - ❖ Improved SQL Server query performance by rewriting complex joins, adding targeted indexes, and reducing unnecessary ORM tracking, cutting several report execution times by **32%**.
 - ❖ Built reusable Angular form controls, validation services, and shared UI libraries that helped frontend teams deliver consistent user experiences across multiple product areas.
 - ❖ Strengthened automated quality gates using **xUnit**, **Jasmine**, **Karma**, and integration tests, increasing test coverage around critical billing flows and reducing hotfix frequency by **19%**.
 - ❖ Worked flexibly across backend APIs, Angular UI, database performance, and production support, allowing the team to handle urgent defects without delaying planned feature delivery.
 - ❖ Supported Docker-based development environments and CI/CD improvements with Azure DevOps and Jenkins, making onboarding smoother and reducing local setup issues by **23%**.
-

Software Engineer

Blackbaud

Jul 2016 – Jan 2018

Charleston, SC

- ❖ Built nonprofit fundraising and donor management features using **ASP.NET Core 2.x**, **C#**, **Angular 4–6**, Entity Framework Core, SQL Server, and REST APIs for secure customer-facing SaaS workflows.
- ❖ Migrated selected modules from legacy **ASP.NET MVC 5** and jQuery-heavy screens to early **Angular** components, improving maintainability and reducing duplicate UI code by **22%**.
- ❖ Implemented donor search, campaign reporting, and permission-based user workflows with API-level validation, improving data accuracy and reducing support tickets by **18%**.
- ❖ Resolved a production issue where duplicated donation records appeared after retry failures by adding idempotent API handling, transaction safeguards, and clearer background job logging.
- ❖ Improved frontend reliability by introducing Angular route guards, shared services, reusable components, and stronger TypeScript typing across critical fundraising workflows.
- ❖ Optimized SQL Server stored procedures and Entity Framework queries for large donor datasets, reducing slow report complaints by **27%** during campaign reporting periods.
- ❖ Collaborated with QA and support teams to reproduce browser-specific Angular issues, isolate root causes, and deliver fixes without disrupting active customer campaigns.
- ❖ Added unit and integration tests with **NUnit**, xUnit, Jasmine, and Karma, improving confidence around releases and reducing regression bugs by **20%**.
- ❖ Participated in Agile planning, code reviews, and architecture discussions, helping the team balance new feature delivery with long-term platform stability.

Software Developer

Granicus

May 2014 – Jun 2016

Dallas, TX

- ❖ Developed civic technology applications using **ASP.NET MVC 5**, **Web API 2**, **C#**, **AngularJS 1.4–1.5**, SQL Server, Bootstrap, and JavaScript for government communication and public meeting workflows.
 - ❖ Created secure API endpoints and administrative dashboards for document publishing, meeting agenda management, and citizen communication workflows used by public-sector clients.
 - ❖ Migrated older server-rendered views into maintainable **AngularJS** modules with reusable directives and services, improving UI consistency and reducing front-end defects by **21%**.
 - ❖ Fixed a recurring issue where agenda attachments failed during large uploads by improving file validation, retry handling, and server-side error messages for support visibility.
 - ❖ Improved SQL Server performance by tuning indexes, simplifying queries, and reducing repeated database calls, cutting several administrative page load times by **26%**.
 - ❖ Implemented role-based permissions, audit trails, and validation rules for sensitive government content workflows, improving compliance readiness and operational transparency.
 - ❖ Worked across frontend, backend, database, and deployment tasks as project priorities shifted, helping the team deliver urgent client fixes without blocking roadmap work.
 - ❖ Expanded automated testing and code review practices around Web API services, reducing repeated production defects by **17%** across release cycles.
-

Junior Software Developer

Vology

Jun 2013 – Apr 2014

Gainesville, FL

- ❖ Built internal cloud services and IT operations tools using **ASP.NET MVC 4**, **C#**, **Web API 2**, **AngularJS 1.2–1.3**, jQuery, Bootstrap, and SQL Server for service request and asset tracking workflows.
- ❖ Implemented new dashboard screens for ticket status, device inventory, and customer service metrics, improving support team visibility and reducing manual lookup time by **24%**.
- ❖ Fixed validation bugs in legacy web forms by improving client-side checks, server-side model validation, and clearer error handling for incomplete customer and asset records.
- ❖ Supported migration from older Web Forms-style patterns toward **ASP.NET MVC** controller-based workflows, improving code organization and reducing duplicated page logic by **18%**.
- ❖ Assisted senior engineers with SQL queries, API troubleshooting, unit testing, and deployment checks, building strong fundamentals in full-stack .NET delivery and production support.

EDUCATION

Arkansas State University

Bachelor's degree, Computer Science (Sep 2009 – May 2013)
