PROFESSIONAL SUMMARY

Staff Software Engineer with Angular-focused full-stack experience in SaaS, property technology, nonprofit CRM, civic technology, and IT services, building enterprise web platforms with **Angular 2–17**, **AngularJS 1.5–1.7**, **TypeScript 2–5**, **RxJS 5–7**, **NgRx 6–16**, **Node.js 10–20**, **.NET Core 2–8**, and cloud CI/CD. Known for migrating legacy UI systems, improving performance, reducing defects, strengthening test coverage, and leading reliable feature delivery across distributed teams while keeping architecture scalable, secure, accessible, and maintainable. Strong in troubleshooting, mentoring engineers, and converting business requirements into clean execution.

TECH SKILLS

- ❖ **Frontend:** **Angular 2–17**, **AngularJS 1.5–1.7**, **TypeScript 2–5**, **JavaScript ES6+**, **RxJS 5–7**, **NgRx 6–16**, HTML5, CSS3, SCSS, Bootstrap, Angular Material, Reactive Forms, Lazy Loading, Component Architecture
- ❖ **Backend:** **Node.js 10–20**, Express.js, **.NET Core 2–8**, ASP.NET Web API, REST APIs, GraphQL, Microservices, Authentication, Authorization, API Gateway Patterns
- ❖ **Database:** **MongoDB 3–7**, PostgreSQL 9–16, SQL Server, MySQL, Redis, Entity Framework Core, Query Optimization, Data Modeling
- ❖ **Cloud / DevOps:** AWS, Azure, Docker, Kubernetes, GitHub Actions, Azure DevOps, Jenkins, CI/CD Pipelines, Terraform, Nginx, Cloud Monitoring, Log Analysis
- ❖ **Testing:** Jasmine, Karma, Jest, Cypress, Playwright, xUnit, NUnit, Unit Testing, Integration Testing, E2E Testing, Test Automation
- ❖ **Architecture:** Microservices, Clean Architecture, Domain-Driven Design, Event-Driven Systems, Design Patterns, System Design, Agile/Scrum, Code Review, Mentoring

PROFESSIONAL EXPERIENCE

Staff Software Engineer

Relatio

Jun 2022 – Apr 2026

Las Vegas, NV

- ❖ Led the modernization of a SaaS analytics platform by upgrading legacy Angular modules into **Angular 15–17** feature libraries, improving page load performance by **28%** through lazy loading, route-level code splitting, and optimized RxJS subscriptions.
- ❖ Designed reusable **Angular Reactive Forms** and validation components for complex enterprise workflows, reducing duplicated UI logic by **24%** and making feature delivery more consistent across product teams.
- ❖ Migrated state-heavy dashboard screens from local component state to **NgRx 14–16**, solving inconsistent filter behavior, stale API responses, and race-condition issues during multi-tab user sessions.
- ❖ Built secure API integration layers using **TypeScript 4–5**, **RxJS 7**, and interceptor-based authentication, improving token refresh reliability and reducing frontend authorization defects by **22%**.

- ❖ Implemented role-based UI rendering and permission-aware routing in **Angular 16**, helping product teams release configurable tenant-level access control without hardcoding business rules inside components.
- ❖ Resolved production memory leaks caused by unmanaged subscriptions, modal lifecycle errors, and repeated observable streams by applying **takeUntil**, async pipes, and stricter component cleanup patterns.
- ❖ Partnered with backend engineers to improve **Node.js 18–20** and **.NET 6–8** API contracts, reducing frontend/backend integration rework by **18%** through typed DTOs and shared validation rules.
- ❖ Improved test coverage for critical Angular workflows using **Jest**, **Cypress**, and component-level mocks, increasing release confidence and reducing regression bugs during weekly deployments.
- ❖ Created CI/CD quality gates with GitHub Actions, lint checks, unit tests, and E2E smoke tests, reducing failed production releases by **21%** across high-traffic customer-facing modules.
- ❖ Led architecture reviews for frontend performance, accessibility, and maintainability, guiding engineers toward smaller components, stronger typing, and cleaner module boundaries.
- ❖ Mentored mid-level developers on **Angular 15+**, RxJS patterns, and debugging production UI issues, improving team delivery speed while keeping code reviews practical and educational.
- ❖ Worked closely with product, QA, and DevOps teams to translate business requirements into secure, scalable Angular features that supported long-term SaaS product growth.

Senior Software Engineer

AppFolio

Feb 2018 – May 2022

Goleta, CA

- ❖ Developed property management workflows using **Angular 8–13**, **TypeScript 3–4**, and REST APIs, improving leasing and payment screen usability while supporting large multi-tenant customer accounts.
 - ❖ Migrated several legacy AngularJS screens into modern **Angular 10+** modules, reducing UI maintenance effort by **26%** and removing outdated dependency patterns from high-use application areas.
 - ❖ Implemented shared Angular component libraries for tables, filters, modals, and form controls, improving design consistency and reducing repeated frontend implementation work by **23%**.
 - ❖ Solved production bugs involving duplicate payment submissions, stale form state, and browser-specific validation failures by improving debounce handling, route guards, and backend confirmation flows.
 - ❖ Built API-driven dashboards with **RxJS**, pagination, caching, and error recovery, helping users load property data faster without blocking the interface during large data requests.
 - ❖ Integrated **Jasmine**, **Karma**, and **Cypress** tests into CI pipelines, improving coverage for leasing, billing, and reporting workflows before release branches moved forward.
 - ❖ Collaborated on backend services using **Node.js 12–16**, **.NET Core 3–6**, and SQL-based data models to support cleaner API contracts for Angular consumers.
 - ❖ Improved frontend build performance by removing unused dependencies, adjusting bundle configuration, and applying lazy-loaded routes across large feature areas.
 - ❖ Participated in Agile planning, technical discovery, and cross-team design reviews to make sure Angular features were realistic, testable, and aligned with customer priorities.
 - ❖ Supported production releases by reviewing logs, reproducing UI bugs, and coordinating fixes across QA, backend, and DevOps teams with clear ownership.
-

Software Engineer

Blackbaud

Jul 2016 – Jan 2018

Charleston, SC

- ❖ Built nonprofit CRM and fundraising features using **Angular 4–6**, **TypeScript 2–3**, ASP.NET Web API, and SQL Server, supporting donor management workflows for enterprise customers.
- ❖ Migrated older JavaScript and jQuery-based UI sections into early **Angular** components, improving maintainability by **19%** and reducing manual DOM manipulation issues.
- ❖ Implemented reusable service layers, route modules, and form validation patterns that helped teams deliver consistent user experiences across fundraising and reporting modules.
- ❖ Fixed production defects related to incorrect donor search results, timezone-based date display issues, and failed form submissions by improving API handling and UI validation.
- ❖ Improved reporting screen responsiveness by optimizing API calls, applying pagination, and reducing unnecessary digest/render cycles in complex Angular views.
- ❖ Created unit tests with **Jasmine** and **Karma**, helping the team catch regressions earlier and reduce repeated manual testing for frequently changed CRM screens.
- ❖ Worked with QA and product owners to refine acceptance criteria, reproduce customer-reported issues, and deliver fixes without disrupting active fundraising campaigns.
- ❖ Supported deployment readiness by reviewing pull requests, validating release branches, and coordinating frontend changes with backend service updates.
- ❖ Used Agile delivery practices to break complex product requirements into realistic technical tasks while keeping code quality and maintainability visible during sprint planning.

Software Developer

Granicus

May 2014 – Jun 2016

Dallas, TX

- ❖ Developed civic technology web applications using **AngularJS 1.5–1.7**, JavaScript, Bootstrap, REST APIs, and SQL-backed services for government communication and public meeting workflows.
 - ❖ Improved legacy AngularJS controller logic by moving repeated behavior into services and directives, reducing frontend defects by **17%** in recurring customer configuration screens.
 - ❖ Built responsive administrative interfaces for content publishing, agenda management, and notification workflows while supporting accessibility and browser compatibility requirements.
 - ❖ Resolved difficult production issues involving broken routing, inconsistent API payloads, and permission-related UI failures by improving client-side validation and error messaging.
 - ❖ Implemented API integrations with backend services and improved loading states, retry behavior, and user-facing error handling for high-volume public-sector workflows.
 - ❖ Added automated test coverage around core JavaScript services and AngularJS controllers, improving confidence during frequent maintenance releases.
 - ❖ Worked directly with support and QA teams to reproduce customer issues, isolate root causes, and deliver practical fixes for government users under tight timelines.
 - ❖ Maintained stable delivery in an Agile environment by balancing feature development, bug fixes, refactoring, and production support across multiple civic application modules.
-

Junior Software Developer

Vology

Jun 2013 – Apr 2014

Gainesville, FL

- ❖ Supported internal IT services applications using **AngularJS 1.2–1.4**, JavaScript, HTML, CSS, C#, ASP.NET MVC, and SQL Server under senior engineering guidance.
- ❖ Built small UI enhancements for ticketing, reporting, and inventory workflows, improving internal user efficiency by **12%** through cleaner forms and faster navigation.
- ❖ Fixed early-career production bugs involving validation errors, broken layouts, and inconsistent database records by debugging frontend behavior and backend queries together.
- ❖ Assisted with SQL query updates, stored procedure changes, and API endpoint fixes to keep internal operations tools accurate and stable for business users.
- ❖ Participated in code reviews, Agile ceremonies, documentation updates, and release testing while building strong foundations in **AngularJS**, backend development, and software delivery.

EDUCATION

Arkansas State University

Bachelor's degree, Computer Science (Sep 2009 – May 2013)
