+1 (430) 279-2231 | markhaney.dev@outlook.com

PROFESSIONAL SUMMARY

Staff Software Engineer and **React Full-Stack Lead** with strong experience in SaaS, property-tech, nonprofit technology, civic technology, and managed IT services, building production systems with **React 15–18**, **TypeScript 3–5**, **Next.js 12–14**, **Node.js 14–20**, REST, GraphQL, AWS, Docker, and CI/CD. Specialized in migrating legacy UIs to modern component architecture, improving frontend performance, fixing production defects, building reusable design systems, and leading teams through secure, scalable releases with measurable gains in speed, reliability, accessibility, developer productivity, and long-term maintainability across customer-facing platforms.

TECH SKILLS

- ❖ **Frontend:** **React 15–18**, **Next.js 12–14**, **TypeScript 3–5**, JavaScript ES6+, Redux 3–4, Redux Toolkit 1–2, React Query 4–5, React Router 5–6, MUI 4–5, Tailwind CSS 3, Bootstrap 3–5, Storybook 5–7
- ❖ **Backend:** **Node.js 12–20**, Express.js 4, REST APIs, GraphQL 15–16, MongoDB 4–7, PostgreSQL 10–15, Redis 5–7
- ❖ **Testing:** **Jest 24–29**, React Testing Library 11–14, Cypress 6–13, Playwright 1.x, Enzyme, Unit Testing, Integration Testing
- ❖ **DevOps & Cloud:** AWS, Docker, GitHub Actions, GitLab CI, Jenkins, CI/CD pipelines, CloudFront, S3, ECS, Kubernetes basics
- ❖ **Engineering:** Agile Methodologies, Microservices, System Design, Code Review, Performance Optimization, Accessibility, Design Systems

PROFESSIONAL EXPERIENCE

Staff Software Engineer

Relatio

Jun 2022 – Apr 2026

Las Vegas, NV

- ❖ Led frontend architecture for SaaS workflow platforms using **React 18.2**, **TypeScript 5.x**, **Next.js 13–14**, and **Node.js 18–20**, improving page stability and delivery consistency across product teams.
- ❖ Migrated legacy client-side dashboards from mixed JavaScript components to **React 18.2** functional components, reducing duplicated UI logic by **23%** and improving long-term maintainability.
- ❖ Built reusable design-system components with **MUI 5**, Storybook 7, and strict TypeScript contracts, helping teams ship consistent screens faster with fewer regression bugs.
- ❖ Implemented customer-facing analytics and workflow features using **React Query 4–5**, REST APIs, and GraphQL 16, improving data refresh behavior and reducing unnecessary network calls by **18%**.
- ❖ Solved a production issue where cached API responses showed stale workflow states by adding query invalidation rules, optimistic rollback handling, and safer error boundaries.
- ❖ Improved Core Web Vitals by splitting heavy routes, lazy-loading chart modules, and optimizing bundle output in **Next.js 13**, reducing initial load time by **21%**.
- ❖ Designed frontend permission checks connected to backend RBAC rules, preventing unauthorized UI actions while keeping sensitive authorization logic enforced server-side.

- ❖ Partnered with DevOps engineers to improve CI/CD pipelines with GitHub Actions, Docker, Jest 29, and Cypress 13, reducing failed releases caused by frontend regressions.
- ❖ Introduced stronger unit and integration testing standards with **React Testing Library 14**, increasing reliable coverage around forms, tables, permissions, and async states.
- ❖ Resolved accessibility issues across modals, keyboard navigation, form errors, and focus states, making the platform more usable for enterprise customers.
- ❖ Mentored engineers through code reviews, architecture discussions, and migration planning, improving team ownership without slowing product delivery.
- ❖ Balanced frontend, backend, and DevOps work flexibly across releases, supporting urgent production fixes, new feature delivery, and platform modernization.

Senior Software Engineer

AppFolio

Feb 2018 – May 2022

Goleta, CA

- ❖ Built property-management SaaS features with **React 16–18**, **TypeScript 3.7–4.8**, Redux 4, React Router 5–6, and **Node.js 12–16** across tenant, billing, and reporting workflows.
- ❖ Migrated older class-based React screens to hooks-based architecture, reducing component complexity by **19%** and improving onboarding speed for new engineers.
- ❖ Implemented reusable form and table patterns with validation, pagination, filtering, and role-based visibility, improving consistency across high-traffic user workflows.
- ❖ Fixed a production bug where form submissions duplicated payment-related actions by adding idempotent UI handling, disabled states, and backend request validation.
- ❖ Improved frontend performance by memoizing expensive calculations, reducing unnecessary renders, and splitting large Webpack 4–5 bundles for critical pages.
- ❖ Built automated tests with **Jest 24–28**, Cypress 6–10, and React Testing Library, reducing escaped UI defects by **17%** across release cycles.
- ❖ Integrated REST APIs and GraphQL endpoints with predictable client-side state management, improving reliability for complex tenant and property data flows.
- ❖ Worked closely with product managers and designers to convert vague business requirements into scoped technical solutions with realistic delivery plans.
- ❖ Improved CI feedback by separating linting, unit tests, integration tests, and Cypress smoke tests, helping teams identify frontend failures faster.
- ❖ Reviewed pull requests for architecture, test quality, accessibility, and performance, supporting maintainable delivery across multiple agile teams.

Software Engineer

Blackbaud

Jul 2016 – Jan 2018

Charleston, SC

- ❖ Developed nonprofit technology features using **React 15–16**, JavaScript ES6, Redux 3–4, Webpack 2–3, Bootstrap 3–4, and REST-based service integrations.
- ❖ Helped modernize older UI modules by replacing jQuery-heavy interactions with reusable **React 16** components and predictable Redux state flows.
- ❖ Built donation, reporting, and account-management screens with strong validation, loading states, and error handling for real customer workflows.

- ❖ Resolved a production issue where browser-specific validation failed in older environments by standardizing form logic and adding cross-browser test coverage.
- ❖ Improved page rendering behavior by reducing unnecessary DOM updates, optimizing asset loading, and cleaning duplicated frontend utilities, improving speed by **14%**.
- ❖ Created unit tests with Jest 20–22 and Enzyme, improving confidence during refactoring and reducing repeated manual QA work by **16%**.
- ❖ Collaborated with backend engineers to stabilize API contracts, handle inconsistent payloads safely, and prevent frontend crashes from unexpected null data.
- ❖ Supported gradual migration from legacy JavaScript patterns to component-based development without blocking active product releases.
- ❖ Participated in Agile planning, estimation, code review, and production support while building stronger frontend engineering standards across the team.

Software Developer

Granicus

May 2014 – Jun 2016

Dallas, TX

- ❖ Built civic technology interfaces using JavaScript ES5–ES6, **React 0.14–15** in selected modules, AngularJS 1.x, Bootstrap 3, Gulp, and REST APIs.
- ❖ Contributed to early component-based UI adoption by implementing small reusable React widgets where the team needed cleaner state handling.
- ❖ Maintained and enhanced public-sector portals with responsive layouts, accessibility improvements, and reliable browser support for government users.
- ❖ Fixed a recurring production issue where inconsistent API response shapes broke public listing pages by adding safer parsing and fallback UI handling.
- ❖ Improved frontend maintainability by extracting shared validation, date formatting, and table behavior from duplicated page scripts into reusable utilities.
- ❖ Reduced manual release issues by **12%** through better smoke testing, clearer deployment checklists, and improved coordination with QA teams.
- ❖ Worked with backend developers to integrate REST endpoints, handle pagination, and improve error messages for citizen-facing workflows.
- ❖ Used Agile practices, Git workflows, and peer review to deliver stable features while supporting legacy application constraints.

Junior Software Developer

Vology

Jun 2013 – Apr 2014

Gainesville, FL

- ❖ Supported managed IT service applications using JavaScript, jQuery, Bootstrap 3, HTML5, CSS3, basic Node.js tooling, and SQL-backed internal systems.
- ❖ Built and maintained internal dashboards, service request screens, and reporting views while learning production support and practical debugging habits.
- ❖ Fixed UI defects related to layout breakage, inconsistent validation, and browser compatibility, reducing repeated support issues by **11%**.
- ❖ Collaborated with senior engineers on API integrations, database-backed workflows, and frontend improvements for operational service teams.

- ❖ Developed strong fundamentals in Git, Agile delivery, troubleshooting, code reviews, and maintainable frontend development before moving into larger React systems.

EDUCATION

Arkansas State University

Bachelor's degree, Computer Science (Sep 2009 – May 2013)
