PROFESSIONAL SUMMARY

Senior Azure DevOps Engineer with 10+ years delivering B2B SaaS, e-commerce, and enterprise operations platforms using Azure AKS, App Service, Functions, networking, Terraform/Bicep, Kubernetes; combines cloud platform and reliability engineering, legacy modernization, cloud delivery, performance engineering, and technical leadership to build secure, scalable systems that improve reliability, release velocity, operational efficiency, and business outcomes.

TECHNICAL SKILLS

- **Cloud Platforms:** Azure App Service, Functions, AKS, API Management, Azure SQL, Cosmos DB, Blob Storage, Service Bus, Event Grid, Key Vault and Application Insights.
- **Infrastructure as Code:** Terraform, Terragrunt, CloudFormation, Bicep, Helm, reusable modules, remote state, policy as code, drift detection and automated provisioning.
- **Containers and Orchestration:** Docker, Kubernetes, EKS, AKS, GKE, Helm, Kustomize, ingress controllers, Istio, autoscaling, disruption budgets, network policies, workload identity and cluster upgrades.
- **CI/CD and Release Engineering:** GitHub Actions, GitLab CI, Jenkins, Azure DevOps, Cloud Build, Argo CD, artifact repositories, GitOps, blue-green/canary releases and automated rollback.
- **Automation and Runtime Engineering:** Python, Bash, PowerShell, Go, Linux administration, patching, certificate renewal, configuration management, platform APIs and operational tooling.
- **Observability and Reliability:** OpenTelemetry, Prometheus, Grafana, Datadog, New Relic, Sentry, Elastic Stack, structured logging, distributed tracing, SLI/SLO monitoring, alert tuning, incident response and root-cause analysis. Capacity planning, error budgets, disaster recovery, backup validation, chaos testing and performance engineering.
- **Security and Governance:** IAM, RBAC, OIDC, Vault, cloud key management, secrets rotation, Trivy, Snyk, least privilege, image signing, policy enforcement and audit logging.
- **Engineering Leadership:** Architecture reviews, technical leadership, mentoring, code reviews, legacy modernization, performance engineering, production readiness, secure development, Agile delivery, technical estimation, stakeholder communication and cross-team release coordination. Incident command, runbook development, change management, cost optimization and platform enablement.

PROFESSIONAL EXPERIENCE

BEVY

Senior Software Engineer

September 2021 - June 2026

Remote, Romania

- Architected **multi-tenant B2B SaaS and enterprise operations platforms** using **Kubernetes, Terraform, Helm, GitHub Actions, Linux automation, and Azure**, defining scalable domain boundaries, reusable delivery standards, and production controls across several product teams.
- Modernized tightly coupled legacy applications into **modular, cloud-ready services and interfaces** aligned with **Azure AKS, App Service, Functions, networking, Terraform/Bicep, Kubernetes, Helm and Azure DevOps**, using staged migration, compatibility APIs, feature flags, and contract validation to protect active customers.
- Reduced **deployment lead time by 46%** through reusable infrastructure modules, parallel CI stages, automated policy checks, immutable artifacts, and rollback-ready progressive delivery.
- Resolved production incidents involving **database-pool exhaustion, memory growth, duplicate background jobs, stale cache entries, partial downstream failures, and unbounded retries** by adding lifecycle controls, idempotency, correlation IDs, and failure isolation.
- Led safe upgrades across **Kubernetes, Terraform, Helm, GitHub Actions, Linux automation, and Azure** by replacing unsupported dependencies, updating build images and deployment manifests, validating breaking changes through regression and load testing, and releasing through canary stages with rollback plans.
- Delivered new capabilities for **billing, subscriptions, reporting, audit history, notifications, search, administration, and customer-support workflows**, translating complex requirements into secure APIs, resilient asynchronous processing, and maintainable user experiences.
- Improved architecture with **Domain-Driven Design, clean architecture, event-driven workflows, transactional outbox processing, tenant-aware authorization, distributed caching, and observability**, strengthening consistency across synchronous and asynchronous operations.
- Strengthened **CI/CD and production quality** with **Docker, Kubernetes, Terraform, automated tests, security scanning, schema-migration gates, deployment approvals, and Azure monitoring**, reducing release risk and improving operational visibility.

- Mentored engineers through **architecture reviews, pull-request feedback, production debugging, incident retrospectives, estimation, and release-readiness sessions**, improving code consistency, technical ownership, and cross-team delivery decisions.

Syscom Digital

Software Engineer

October 2019 - August 2021

Remote, Romania

- Developed commerce, customer-service, and operational products using **Docker, Kubernetes, Terraform, Jenkins, Linux, and Azure**, supporting checkout, order tracking, refunds, fulfillment, reporting, user administration, and third-party provider integrations.
- Implemented new **payment, notification, search, workflow, export, and reconciliation features** with secure APIs, asynchronous workers, validation, and audit-friendly state transitions across customer and administrative experiences.
- Reduced **failed production deployments by 33%** by adding environment validation, artifact versioning, infrastructure checks, smoke tests, and documented rollback procedures.
- Investigated production issues involving **duplicate provider callbacks, inventory mismatches, stale sessions, timeout chains, malformed payloads, and long-running database transactions**, then introduced concurrency controls, bounded retries, and reconciliation routines.
- Modernized older modules within **Docker, Kubernetes, Terraform, Jenkins, Linux, and Azure** by introducing typed contracts, clearer service boundaries, shared components, supported runtime versions, and compatibility tests that enabled gradual replacement without interrupting daily operations.
- Improved performance through **server-side pagination, indexed queries, reduced serialization, selective data loading, caching, connection-pool tuning, and browser or runtime profiling**, keeping high-volume administrative workflows responsive.
- Expanded delivery pipelines with **Jenkins/GitLab CI, Docker, unit and integration tests, static analysis, artifact versioning, migration validation, smoke tests, and staged environment promotion** across development, QA, and production.
- Collaborated with product owners, designers, QA, support teams, security reviewers, and external providers to convert ambiguous requirements into **testable stories, resilient failure handling, measurable acceptance criteria, and release documentation**.

Soft Build

Software Developer

June 2016 - July 2019

Remote, Romania

- Built full-stack business applications using **Linux, Docker, Jenkins, Bash/PowerShell, virtual machines, and early cloud services** for commerce, booking, pricing, inventory, reporting, account management, and internal administration across multiple client engagements.
- Reduced **environment preparation time by 40%** by automating deployment prerequisites, configuration validation, service setup, and repeatable release checks.
- Developed new **REST endpoints, reusable interface modules, scheduled imports, reporting features, role-based workflows, and provider integrations**, keeping validation and business rules separated from delivery and persistence concerns.
- Resolved defects involving **duplicate submissions, stale inventory, null-reference failures, inconsistent validation, slow database queries, missing error feedback, and partial updates** through transactions, defensive checks, indexed access, and explicit recovery states.
- Moved blocking email, document, synchronization, import, and report-generation work into **background jobs and queue-based processing**, adding retry policies, schedules, failed-job diagnostics, and operational visibility for support teams.
- Expanded quality coverage with **unit, integration, API regression, browser, and database migration tests**, prioritizing authentication, pricing, persistence, concurrency, and other high-risk customer workflows.
- Supported **execution-plan analysis, production incident resolution, deployment automation, code reviews, technical estimation, and legacy modernization**, while introducing reusable architecture and coding standards across projects.

Decima Digital

Software Developer

November 2015 - April 2016

Remote, Estonia

- Delivered customer-facing websites and administration tools using **Linux/Windows servers, IIS/Nginx, scripted deployments, networking, and monitoring**, supporting account workflows, content management, file handling, search, forms, notifications, and operational reporting.
- Maintained server-rendered and tightly coupled legacy modules while introducing **reusable services, clearer controllers, modular client code, and consistent validation**, allowing new features to coexist safely with older functionality.
- Built controllers, service classes, repositories, scheduled utilities, and database scripts for **content retrieval, form processing, account operations, file uploads, notification routing, and report generation**.
- Fixed production defects involving **failed uploads, broken validation, malformed requests, null-reference exceptions, duplicate submissions, database connectivity errors, and missing user feedback** through reproducible diagnostics and defensive handling.

- Improved slow operations by reviewing generated SQL, removing unnecessary object loading, adding targeted indexes, reducing repeated in-memory loops, and replacing oversized queries with focused data access patterns.
- Participated in **deployment preparation, browser and API compatibility testing, backup verification, smoke testing, rollback planning, and requirement reviews** with designers, project managers, and senior engineers.

Borna Technology

September 2014 - August 2015

Software Developer Intern

Tallinn, Estonia

- Assisted senior engineers with **Windows/Linux administration, IIS, Git, SQL Server, and deployment scripts** across internal tools and client-facing applications, following established coding, source-control, database, and release practices.
- Built small interface enhancements, reusable templates, server-side handlers, validation scripts, and database-backed administration pages while learning structured debugging and maintainable implementation patterns.
- Created and updated **SQL queries, stored procedures, migration scripts, test data, and integration utilities** under supervision, applying safe database-change and review practices.
- Investigated **invalid submissions, null-reference errors, database connectivity failures, layout defects, inconsistent API responses, and deployment configuration problems** by reproducing issues and documenting diagnostic steps.
- Contributed to **QA checks, deployment notes, smoke tests, code reviews, and technical documentation**, establishing a practical foundation in collaborative delivery, production support, and release discipline.

SELECTED PROJECTS

Cloud Platform and Secure Delivery Foundation

Designed a reusable infrastructure and deployment platform using Azure AKS, App Service, Functions, networking, Terraform/Bicep, Kubernetes, Helm and Azure DevOps, standardizing networking, identity, observability, secrets, CI/CD and production controls.

Implemented policy as code, signed images, automated environment provisioning, rollback-safe releases, centralized telemetry and disaster-recovery validation.

Infrastructure Modernization and Reliability Program

Led the migration of manually managed servers and pipelines into containerized, infrastructure-as-code environments with self-service delivery patterns.

Resolved configuration drift, certificate risk, weak access controls, inconsistent monitoring and fragile releases through automation, runbooks and measurable service objectives.

EDUCATION

Tallinn University - Bachelor's Degree in Computer Science | September 2011 - May 2014
