

Cristoff Stan

Senior Site Reliability Engineer - Cloud and Kubernetes

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/crsitoff-s-241496421> | Phone: +372 58619311

PROFESSIONAL SUMMARY

Senior Site Reliability Engineer with 10+ years delivering B2B SaaS, e-commerce, and enterprise operations platforms using SRE practices, Kubernetes, Terraform, observability, incident management, capacity planning; combines cloud platform and reliability engineering, legacy modernization, cloud-native delivery, performance engineering, and technical leadership to build secure, scalable systems that improve reliability, release velocity, operational efficiency, and measurable business outcomes.

TECHNICAL SKILLS

- **Cloud Platforms:** AWS, Azure and GCP production services, Kubernetes clusters, service networking, load balancing and managed data services.
- **Infrastructure as Code:** Terraform, Terragrunt, CloudFormation, Bicep, Helm, reusable modules, remote state, policy as code, drift detection and automated provisioning.
- **Containers and Orchestration:** Docker, Kubernetes, EKS, AKS, GKE, Helm, Kustomize, ingress controllers, Istio, autoscaling, disruption budgets, network policies, workload identity and cluster upgrades.
- **CI/CD and Release Engineering:** GitHub Actions, GitLab CI, Jenkins, Azure DevOps, Cloud Build, Argo CD, artifact repositories, GitOps, blue-green/canary releases and automated rollback.
- **Automation and Runtime Engineering:** Python, Bash, PowerShell, Go, Linux administration, patching, certificate renewal, configuration management, platform APIs and operational tooling.
- **Observability and Reliability:** OpenTelemetry, Prometheus, Grafana, Datadog, New Relic, Sentry, Elastic Stack, structured logging, distributed tracing, SLI/SLO monitoring, alert tuning, incident response and root-cause analysis. Capacity planning, error budgets, disaster recovery, backup validation, chaos testing and performance engineering.
- **Security and Governance:** IAM, RBAC, OIDC, Vault, cloud key management, secrets rotation, Trivy, Snyk, least privilege, image signing, policy enforcement and audit logging.
- **Engineering Leadership:** Architecture reviews, technical leadership, mentoring, code reviews, legacy modernization, performance engineering, production readiness, secure development, Agile delivery, technical estimation, stakeholder communication and cross-team release coordination. Incident command, runbook development, change management, cost optimization and platform enablement.

PROFESSIONAL EXPERIENCE

BEVY

Senior Software Engineer

September 2021 - June 2026

Remote, Romania

- Architected **multi-tenant B2B SaaS and enterprise operations platforms** using **Kubernetes, Terraform, Helm, GitHub Actions, Linux automation, and AWS, Azure, and GCP**, defining scalable domain boundaries, reusable delivery standards, and production controls across several product teams.
- Modernized tightly coupled legacy applications into **modular, cloud-ready services and interfaces** aligned with **SRE practices, Kubernetes, Terraform, observability, incident management, capacity planning, reliability automation and multi-cloud systems**, using staged migration, compatibility APIs, feature flags, and contract validation to protect active customers.
- Reduced **deployment lead time by 46%** through reusable infrastructure modules, parallel CI stages, automated policy checks, immutable artifacts, and rollback-ready progressive delivery.
- Resolved production incidents involving **database-pool exhaustion, memory growth, duplicate background jobs, stale cache entries, partial downstream failures, and unbounded retries** by adding lifecycle controls, idempotency, correlation IDs, and failure isolation.
- Led safe upgrades across **Kubernetes, Terraform, Helm, GitHub Actions, Linux automation, and AWS, Azure, and GCP** by replacing unsupported dependencies, updating build images and deployment manifests, validating breaking changes through regression and load testing, and releasing through canary stages with rollback plans.
- Delivered new capabilities for **billing, subscriptions, reporting, audit history, notifications, search, administration, and customer-support workflows**, translating complex requirements into secure APIs, resilient asynchronous processing, and maintainable user experiences.
- Improved architecture with **Domain-Driven Design, clean architecture, event-driven workflows, transactional outbox processing, tenant-aware authorization, distributed caching, and observability**, strengthening consistency across synchronous and asynchronous operations.

- Strengthened **CI/CD and production quality** with **Docker, Kubernetes, Terraform, automated tests, security scanning, schema-migration gates, deployment approvals, and AWS, Azure, and GCP monitoring**, reducing release risk and improving operational visibility.
- Mentored engineers through **architecture reviews, pull-request feedback, production debugging, incident retrospectives, estimation, and release-readiness sessions**, improving code consistency, technical ownership, and cross-team delivery decisions.

Syscom Digital

October 2019 - August 2021

Software Engineer

Remote, Romania

- Developed commerce, customer-service, and operational products using **Docker, Kubernetes, Terraform, Jenkins, Linux, and AWS, Azure, and GCP**, supporting checkout, order tracking, refunds, fulfillment, reporting, user administration, and third-party provider integrations.
- Implemented new **payment, notification, search, workflow, export, and reconciliation features** with secure APIs, asynchronous workers, validation, and audit-friendly state transitions across customer and administrative experiences.
- Reduced **failed production deployments by 33%** by adding environment validation, artifact versioning, infrastructure checks, smoke tests, and documented rollback procedures.
- Investigated production issues involving **duplicate provider callbacks, inventory mismatches, stale sessions, timeout chains, malformed payloads, and long-running database transactions**, then introduced concurrency controls, bounded retries, and reconciliation routines.
- Modernized older modules within **Docker, Kubernetes, Terraform, Jenkins, Linux, and AWS, Azure, and GCP** by introducing typed contracts, clearer service boundaries, shared components, supported runtime versions, and compatibility tests that enabled gradual replacement without interrupting daily operations.
- Improved performance through **server-side pagination, indexed queries, reduced serialization, selective data loading, caching, connection-pool tuning, and browser or runtime profiling**, keeping high-volume administrative workflows responsive.
- Expanded delivery pipelines with **Jenkins/GitLab CI, Docker, unit and integration tests, static analysis, artifact versioning, migration validation, smoke tests, and staged environment promotion** across development, QA, and production.
- Collaborated with product owners, designers, QA, support teams, security reviewers, and external providers to convert ambiguous requirements into **testable stories, resilient failure handling, measurable acceptance criteria, and release documentation**.

Soft Build

June 2016 - July 2019

Software Developer

Remote, Romania

- Built full-stack business applications using **Linux, Docker, Jenkins, Bash/PowerShell, virtual machines, and early cloud services** for commerce, booking, pricing, inventory, reporting, account management, and internal administration across multiple client engagements.
- Reduced **environment preparation time by 40%** by automating deployment prerequisites, configuration validation, service setup, and repeatable release checks.
- Developed new **REST endpoints, reusable interface modules, scheduled imports, reporting features, role-based workflows, and provider integrations**, keeping validation and business rules separated from delivery and persistence concerns.
- Resolved defects involving **duplicate submissions, stale inventory, null-reference failures, inconsistent validation, slow database queries, missing error feedback, and partial updates** through transactions, defensive checks, indexed access, and explicit recovery states.
- Moved blocking email, document, synchronization, import, and report-generation work into **background jobs and queue-based processing**, adding retry policies, schedules, failed-job diagnostics, and operational visibility for support teams.
- Expanded quality coverage with **unit, integration, API regression, browser, and database migration tests**, prioritizing authentication, pricing, persistence, concurrency, and other high-risk customer workflows.
- Supported **execution-plan analysis, production incident resolution, deployment automation, code reviews, technical estimation, and legacy modernization**, while introducing reusable architecture and coding standards across projects.

Decima Digital

November 2015 - April 2016

Software Developer

Remote, Estonia

- Delivered customer-facing websites and administration tools using **Linux/Windows servers, IIS/Nginx, scripted deployments, networking, and monitoring**, supporting account workflows, content management, file handling, search, forms, notifications, and operational reporting.
- Maintained server-rendered and tightly coupled legacy modules while introducing **reusable services, clearer controllers, modular client code, and consistent validation**, allowing new features to coexist safely with older functionality.
- Built controllers, service classes, repositories, scheduled utilities, and database scripts for **content retrieval, form processing, account operations, file uploads, notification routing, and report generation**.

- Fixed production defects involving **failed uploads, broken validation, malformed requests, null-reference exceptions, duplicate submissions, database connectivity errors, and missing user feedback** through reproducible diagnostics and defensive handling.
- Improved slow operations by reviewing generated SQL, removing unnecessary object loading, adding targeted indexes, reducing repeated in-memory loops, and replacing oversized queries with focused data access patterns.
- Participated in **deployment preparation, browser and API compatibility testing, backup verification, smoke testing, rollback planning, and requirement reviews** with designers, project managers, and senior engineers.

Borna Technology

September 2014 - August 2015

Software Developer Intern

Tallinn, Estonia

- Assisted senior engineers with **Windows/Linux administration, IIS, Git, SQL Server, and deployment scripts** across internal tools and client-facing applications, following established coding, source-control, database, and release practices.
- Built small interface enhancements, reusable templates, server-side handlers, validation scripts, and database-backed administration pages while learning structured debugging and maintainable implementation patterns.
- Created and updated **SQL queries, stored procedures, migration scripts, test data, and integration utilities** under supervision, applying safe database-change and review practices.
- Investigated **invalid submissions, null-reference errors, database connectivity failures, layout defects, inconsistent API responses, and deployment configuration problems** by reproducing issues and documenting diagnostic steps.
- Contributed to **QA checks, deployment notes, smoke tests, code reviews, and technical documentation**, establishing a practical foundation in collaborative delivery, production support, and release discipline.

SELECTED PROJECTS

Cloud Platform and Secure Delivery Foundation

Designed a reusable infrastructure and deployment platform using SRE practices, Kubernetes, Terraform, observability, incident management, capacity planning, reliability automation and multi-cloud systems, standardizing networking, identity, observability, secrets, CI/CD and production controls.

Implemented policy as code, signed images, automated environment provisioning, rollback-safe releases, centralized telemetry and disaster-recovery validation.

Infrastructure Modernization and Reliability Program

Led the migration of manually managed servers and pipelines into containerized, infrastructure-as-code environments with self-service delivery patterns.

Resolved configuration drift, certificate risk, weak access controls, inconsistent monitoring and fragile releases through automation, runbooks and measurable service objectives.

EDUCATION

Tallinn University - Bachelor's Degree in Computer Science | September 2011 - May 2014
