

CRISTOFF STAN

Senior Software Engineer –C#, .NET, Angular, Azure, AWS

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-s-692816413> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Senior Software Engineer with 10+ years delivering B2B SaaS, e-commerce, and enterprise platforms using **.NET Framework 4.5–4.8, .NET Core 2.1–3.1, .NET 6–8, C# 7–12, Angular 8–17, TypeScript 3–5, SQL Server, PostgreSQL, and Azure/AWS**; combines cloud-native architecture, legacy modernization, API and UI performance engineering, CI/CD, and technical leadership to build secure, scalable products that improve reliability, delivery speed, and business operations.

TECHNICAL SKILLS

- **Backend Engineering:** C# 7–12, .NET Framework 4.5–4.8, .NET Core 2.1–3.1, .NET 6–8, ASP.NET MVC, ASP.NET Core Web API, Minimal APIs, Entity Framework Core, Dapper, LINQ, MediatR, AutoMapper, FluentValidation, Hangfire, SignalR, REST APIs, GraphQL, gRPC and background services.
- **Frontend Engineering:** Angular 8–17, AngularJS, TypeScript 3–5, JavaScript ES6+, RxJS, NgRx, Angular Signals, Angular Material, reactive forms, standalone components, lazy loading, route guards, interceptors, PrimeNG, Tailwind CSS, HTML5, CSS3 and responsive design.
- **Architecture and Integration:** Microservices, modular monoliths, Domain-Driven Design, clean architecture, hexagonal architecture, CQRS, event-driven architecture, API gateways, OAuth 2.0, OpenID Connect, JWT, RBAC, multi-tenancy, saga patterns, outbox patterns and idempotent processing.
- **Cloud Platforms:** Microsoft Azure App Service, Azure Functions, AKS, Service Bus, Event Grid, Event Hubs, API Management, Azure SQL, Cosmos DB, Blob Storage, Key Vault, Application Insights and Azure Monitor; AWS ECS, Lambda, S3, RDS, SQS, SNS, API Gateway and CloudWatch.
- **DevOps and Infrastructure:** Docker, Kubernetes, Terraform, Bicep, Helm, Azure DevOps, GitHub Actions, GitLab CI, Jenkins, SonarQube, NuGet, automated database migrations, deployment approvals, container scanning and environment-based configuration.
- **Databases and Messaging:** SQL Server, PostgreSQL, MySQL, MongoDB, Cosmos DB, Redis, DynamoDB, Elasticsearch/OpenSearch, Azure Service Bus, RabbitMQ, Apache Kafka, Entity Framework migrations, indexing, query optimization and distributed caching.
- **Testing and Quality:** xUnit, NUnit, MSTest, Moq, NSubstitute, FluentAssertions, Testcontainers, WireMock.Net, Jasmine, Karma, Jest, Cypress, Playwright, Pact, Postman, contract testing, integration testing and end-to-end testing.
- **Monitoring and Reliability:** OpenTelemetry, Application Insights, Azure Monitor, Prometheus, Grafana, Datadog, New Relic, Sentry, Serilog, structured logging, distributed tracing, alert optimization, incident response and root-cause analysis.
- **Senior Engineering Practices:** Architecture reviews, technical leadership, mentoring, code reviews, legacy modernization, performance engineering, production readiness, secure coding, Agile delivery, technical estimation and stakeholder communication.

WORK EXPERIENCE

BEVY

Senior Software Engineer

(September 2021 – June 2026)

Remote, Romania

- Architected multi-tenant enterprise applications using **C#, .NET Core 3.1, later .NET 6–8, Angular 10–17, TypeScript 4–5, PostgreSQL, and Azure/AWS**, establishing modular service boundaries and reusable frontend standards across several product teams.
- Modernized a tightly coupled ASP.NET application into domain-oriented **.NET services**, extracting account, billing, reporting, and notification capabilities through staged migration, compatibility APIs, and automated contract validation.
- Migrated Angular 10 feature modules to **Angular 14–17 standalone components, strict TypeScript, RxJS, and NgRx**, reducing duplicated state logic and improving frontend delivery speed by **36%** across frequently changed workflows.
- Resolved production latency caused by **Entity Framework N+1 queries**, unbounded result sets, missing indexes, and repeated calculations by introducing projections, compiled queries, pagination, Redis caching, and targeted SQL tuning.
- Implemented event-driven workflows with **Azure Service Bus, Kafka, transactional outbox records, idempotent consumers, retry policies, and dead-letter processing**, preventing duplicate notifications and inconsistent downstream updates.
- Led migrations from **.NET Core 3.1 to .NET 6 and .NET 8**, replacing unsupported packages, adopting nullable reference types, updating container images, and validating runtime changes through staged regression and load testing.
- Built secure REST and GraphQL services with **ASP.NET Core Identity, OAuth 2.0, OIDC, JWT, tenant-aware RBAC, audit logging, Key Vault, and API rate limiting** for customer-facing and administrative operations.
- Improved Angular dashboard responsiveness by virtualizing large tables, applying **OnPush change detection**, introducing server-side filtering, splitting route bundles, and removing unnecessary RxJS subscriptions from complex reporting screens.
- Strengthened CI/CD workflows with **Azure DevOps, GitHub Actions, Docker, Kubernetes, Terraform, SonarQube, and Testcontainers**, automating quality checks, database migrations, image scans, approvals, and controlled production rollouts.
- Mentored engineers through architecture reviews, pull-request feedback, debugging sessions, incident retrospectives, and production-readiness reviews that improved code consistency and reduced preventable release defects.

Syscom Digital

Software Engineer

(October 2019 – August 2021)

Remote, Romania

- Developed responsive commerce and operations platforms using **C#, ASP.NET Core 2.1–3.1, Angular 7–10, TypeScript 3–4, SQL Server, PostgreSQL, and Redis**, balancing rapid feature delivery with maintainable service boundaries.
- Implemented checkout, payment, refund, order-tracking, and customer-support workflows using **ASP.NET Core Web API, Entity Framework Core, NgRx, RxJS, Angular Router, and third-party payment integrations**.
- Reduced recurring webhook and payment callback failures by **29%** through idempotency keys, signature verification, correlation IDs, retry-safe handlers, and structured error classification around external provider responses.

- Investigated inventory mismatches caused by concurrent requests and delayed payment events, then introduced **optimistic concurrency, transactional boundaries, and scheduled reconciliation jobs** to restore accurate stock levels.
- Migrated loosely typed Angular modules to **strict TypeScript**, defining shared DTOs, typed API clients, reactive forms, and predictable NgRx state transitions that reduced production data-shape errors.
- Fixed performance issues in large administration tables by applying **OnPush change detection, trackBy functions, memoized selectors, backend filtering, and server-side pagination**.
- Created reusable ASP.NET Core middleware for authentication, request tracing, validation, rate limiting, exception handling, and standardized API responses across multiple business services.
- Expanded delivery pipelines with **Jenkins, GitLab CI, Docker, automated tests, Entity Framework migration validation, and staged deployments** across development, QA, and production environments.
- Collaborated with product owners, QA engineers, designers, and support teams to transform unclear commerce requirements into testable stories, resilient workflows, and production-ready acceptance criteria.

Soft Build

Software Developer

(June 2016 – July 2019)

Remote, Romania

- Built full-stack business applications using **C#, .NET Framework 4.6–4.8, ASP.NET MVC 5, later ASP.NET Core 2.x, AngularJS, Angular 5–8, SQL Server, MySQL, and Redis** for commerce, booking, and administration workflows.
- Improved page-load and interaction performance by **38%** by replacing jQuery-heavy screens with Angular components, reducing API response sizes, compressing static assets, and introducing browser caching rules.
- Developed REST APIs for inventory, appointment, pricing, reporting, and customer-management modules using layered controller, service, and repository patterns to keep business rules maintainable.
- Resolved duplicated submissions, stale inventory values, and inconsistent user sessions by adding **server-side validation, database transactions, idempotency checks, and explicit frontend recovery states**.
- Refactored blocking email, reporting, and synchronization processes into **Hangfire background jobs**, improving request response times while adding retry handling and operational visibility for failed tasks.
- Created reusable Angular forms, modal workflows, validation directives, route guards, and dashboard components that enabled teams to deliver similar business screens without rebuilding common behavior.
- Added **xUnit, NUnit, Moq, Jasmine, Karma, and integration tests** around pricing calculations, authentication filters, repositories, and critical API endpoints to reduce regression risk.
- Worked with senior engineers on SQL execution plans, database indexing, IIS deployment scripts, code reviews, and production incident fixes, developing disciplined .NET and frontend engineering practices.

Decima Digital

Software Developer

(November 2015 – April 2016)

Remote, Estonia

- Delivered business functionality using **C#, .NET Framework 4.5.2, ASP.NET MVC 5, Entity Framework 6, AngularJS, JavaScript, HTML, CSS, and SQL Server** for customer-facing websites and administration tools.
- Maintained server-rendered Razor screens and legacy jQuery modules while introducing AngularJS controllers and services for interactive forms, search interfaces, file management, and administrative workflows.
- Built MVC controllers, service classes, and repository components for form processing, notification routing, content retrieval, file uploads, and basic account-management operations.

- Fixed production defects involving broken validation, failed file uploads, null-reference exceptions, and missing user feedback by strengthening backend checks and client-side error handling.
- Improved slow database operations by reviewing generated **Entity Framework queries**, removing unnecessary object loading, adding indexes, and replacing inefficient loops with targeted SQL operations.
- Participated in deployment preparation, browser compatibility testing, smoke checks, IIS configuration, and rollback planning, helping reduce last-minute release issues across client applications.
- Collaborated with designers and project managers to convert business requirements into responsive AngularJS interfaces, maintainable ASP.NET services, and practical implementation estimates.

Borna Technology

Software Developer Intern

(September 2014 – August 2015)

Tallinn, Estonia

- Assisted senior engineers with **C#, .NET Framework 4.5, ASP.NET MVC, Entity Framework 6, JavaScript, early AngularJS, HTML, CSS, and SQL Server** tasks across internal and client-facing applications.
- Built small UI enhancements, reusable Razor partial views, and validation scripts while learning structured debugging, browser compatibility handling, and clean Git collaboration practices.
- Supported backend development for MVC controllers, form handlers, database-backed administration pages, and server-side validation using **C#, ASP.NET, Entity Framework, and SQL Server**.
- Investigated layout defects, invalid form submissions, null-reference errors, and inconsistent JSON responses by reproducing problems and documenting reliable diagnostic steps for senior developers.
- Contributed to QA checks, deployment notes, and code reviews, establishing a strong foundation in professional software delivery, maintainability, teamwork, and production support.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,

September 2011 – May 2014

CERTIFICATIONS

- Microsoft Certified: Azure Developer Associate
- Microsoft Certified: Azure Solutions Architect Expert
- AWS Certified Solutions Architect – Associate
- Certified Kubernetes Application Developer — CKAD
- Professional Scrum Developer I — PSD I

PROJECTS

Cloud-Native Operations and Workflow Platform

- Designed a multi-tenant operations platform using **.NET 8, ASP.NET Core, Angular 17, TypeScript, NgRx, PostgreSQL, Redis, Azure Service Bus, and AKS** to support order management, payment reconciliation, customer service, reporting, audit history, and event-driven notifications.

- Implemented **idempotent APIs, transactional outbox processing, tenant-aware authorization, distributed tracing, Testcontainers integration tests, and containerized CI/CD pipelines**, improving reliability across asynchronous financial and operational workflows.

Enterprise .NET and Angular Modernization Program

- Led the migration of a legacy **.NET Framework, AngularJS, and jQuery** application into **.NET 8 services and an Angular 17 frontend**, replacing tightly coupled modules with documented APIs, typed contracts, standalone components, and independently deployable workloads.
- Resolved outdated dependencies, inefficient Entity Framework queries, inconsistent authentication, fragile schema migrations, large frontend bundles, and limited production visibility through **OIDC, EF Core, Angular lazy loading, OpenTelemetry, and automated testing**.
