

CRISTOFF STAN

Senior Software Engineer – Angular, Node.js, TypeScript, AWS/GCP

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-s-692816413> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Senior Software Engineer with 10+ years delivering B2B SaaS, e-commerce, and enterprise platforms using **Angular 2–19**, **Node.js 6–22**, **TypeScript 3–5**, **NestJS**, **PostgreSQL**, and **AWS/GCP**, combining front-end architecture, secure API engineering, cloud modernization, performance optimization, CI/CD leadership, and production ownership to build scalable systems that accelerate delivery, reduce operational risk, and create measurable business value.

TECHNICAL SKILLS

- **Frontend Engineering:** Angular 2–19, AngularJS 1.x, TypeScript 3–5, JavaScript ES6+, RxJS, NgRx, Angular Signals, Angular Material, PrimeNG, Tailwind CSS, HTML5, CSS3, SCSS, reactive forms, standalone components, lazy loading, micro-frontends, responsive design, accessibility, and reusable design systems.
- **Backend Engineering:** Node.js 6–22, NestJS, Express.js, REST APIs, GraphQL, WebSockets, OpenAPI/Swagger, JWT, OAuth 2.0, OpenID Connect, RBAC, background workers, API versioning, service-layer architecture, modular monoliths, microservices, and legacy modernization.
- **Cloud and DevOps:** AWS Lambda, ECS, EC2, API Gateway, S3, CloudFront, RDS, SQS, SNS, EventBridge, CloudWatch, IAM, GCP Cloud Run, Cloud SQL, Cloud Storage, Docker, Kubernetes, Terraform, GitHub Actions, GitLab CI, Jenkins, and blue-green deployment practices.
- **Databases and Messaging:** PostgreSQL, MySQL, MongoDB, DynamoDB, Redis, Elasticsearch/OpenSearch, Prisma, TypeORM, Sequelize, Mongoose, SQL optimization, indexing, caching, transactional outbox patterns, event-driven workflows, and asynchronous processing.
- **Testing and Quality:** Jest, Jasmine, Karma, Cypress, Playwright, Supertest, Mocha, Chai, Postman, Pact contract testing, unit testing, integration testing, end-to-end testing, SonarQube, ESLint, static analysis, and automated quality gates.
- **Monitoring and Engineering Practices:** OpenTelemetry, Datadog, New Relic, Sentry, Grafana, Prometheus, structured logging, distributed tracing, Agile/Scrum, architecture reviews, mentoring, technical planning, incident response, root-cause analysis, and production ownership.

WORK EXPERIENCE

BEVY

Senior Software Engineer

(September 2021 – June 2026)

Remote, Romania

- Architected **Angular 10–19** and **Node.js 14–22** applications for multi-tenant B2B SaaS workflows, establishing reusable UI modules, stable API contracts, and consistent release standards across several product teams.

- Modernized legacy AngularJS and early Angular screens into standalone components, RxJS-based state flows, typed reactive forms, and lazy-loaded feature modules, increasing front-end delivery speed by **34%**.
- Built secure **NestJS** and Express services with **TypeScript**, PostgreSQL, Redis, JWT, and OAuth 2.0, supporting tenant-aware authorization, audit trails, and complex role-based business operations.
- Resolved production memory growth caused by unclosed RxJS subscriptions, unbounded Node.js event listeners, and inefficient cache invalidation by adding lifecycle cleanup, heap profiling, and Redis TTL policies.
- Led upgrades from older Angular and Node.js services to supported long-term versions, replacing deprecated libraries, updating build pipelines, and validating breaking changes through staged releases.
- Improved API response times by refactoring slow PostgreSQL joins, adding composite indexes, introducing query pagination, and moving repeated calculations into optimized service-layer operations.
- Designed a reusable Angular component library with Storybook, accessibility standards, design tokens, and typed configuration patterns that kept complex administrative workflows consistent across products.
- Implemented event-driven processing with **AWS Lambda**, SQS, SNS, and PostgreSQL outbox patterns, preventing duplicate notifications and improving reliability during retries and partial downstream failures.
- Strengthened **CI/CD** with GitHub Actions, Docker, Terraform, SonarQube, and cloud deployment gates, adding automated tests, image scanning, environment approvals, and rollback-ready release procedures.
- Mentored engineers through architecture reviews, pull-request feedback, incident debugging, and production-readiness sessions, improving maintainability while reducing avoidable defects before release.

Syscom Digital Software Engineer

(October 2019 – August 2021)

Remote, Romania

- Developed responsive **Angular 6–10** dashboards and **Node.js 10–14** APIs for digital commerce and internal operations platforms, balancing rapid feature delivery with maintainable application boundaries.
- Implemented order, payment, and customer-support workflows with Express, PostgreSQL, Redis, and third-party REST integrations, improving transaction visibility and reducing manual reconciliation effort.
- Reduced recurring checkout and webhook failures by **27%** through idempotency keys, retry-safe handlers, request correlation IDs, dead-letter logging, and clearer diagnostics around payment-provider callbacks.
- Migrated JavaScript modules to TypeScript and replaced loosely structured Angular forms with typed models, reusable validators, route guards, and safer API response contracts that reduced runtime errors.
- Fixed rendering bottlenecks in data-heavy Angular screens by introducing **OnPush change detection**, trackBy functions, virtual scrolling, and memoized selectors for large administrative tables.
- Created reusable Node.js middleware for authentication, validation, rate limiting, structured error responses, and request tracing, making backend behavior more consistent across multiple product modules.
- Supported migration of legacy jQuery widgets into Angular components while preserving business rules, introducing reactive forms, component tests, and clearer ownership of client-side application state.
- Built Jenkins and GitLab CI pipelines with automated unit testing, Docker image creation, static analysis, and staged deployment scripts for development, QA, and production environments.
- Collaborated with product owners, QA engineers, and designers during sprint planning and release validation, translating ambiguous requirements into technical tasks, acceptance criteria, and reliable delivery plans.

Soft Build

Software Developer

(June 2016 – July 2019)

Remote, Romania

- Built full-stack features with **AngularJS, Angular, Node.js**, Express, MySQL, MongoDB, and Redis for e-commerce, booking, and business administration applications.
- Improved page-load performance by **38%** by replacing heavy jQuery interactions with Angular components, compressing assets, reducing API payloads, and introducing browser caching and lazy loading.
- Developed REST APIs for inventory, appointments, reporting, and customer management, applying service-layer patterns that separated business logic from routing and persistence concerns.
- Resolved duplicated form submissions, stale inventory counts, and inconsistent sessions by adding validation guards, transactional updates, request tokens, and clearer error-recovery workflows.
- Migrated callback-heavy Node.js modules toward Promise-based and async patterns where supported, improving readability and reducing nested error-handling defects in backend services.
- Created reusable Angular forms, modal workflows, dashboard widgets, and shared pipes that helped teams deliver recurring business screens without rebuilding validation and layout behavior.
- Added Jasmine, Karma, Jest, and Mocha coverage around pricing calculations, authentication middleware, and critical endpoints, increasing release confidence and lowering regression risk.
- Partnered with senior engineers on database indexing, slow-query analysis, deployment scripts, production troubleshooting, and code reviews, building disciplined full-stack engineering practices.

Decima Digital

Software Developer

(November 2015 – April 2016)

Remote, Estonia

- Delivered JavaScript and **Node.js** features for content-driven business websites, supporting reusable page templates, administrative workflows, and REST-style data access patterns.
- Maintained legacy interfaces built with HTML, CSS, jQuery, and early component-based JavaScript while helping evaluate AngularJS for more interactive forms and administrative modules.
- Built small Express services for form submissions, notification routing, file handling, and content APIs, improving separation between browser behavior and backend processing logic.
- Fixed production defects involving broken validation, inconsistent uploads, duplicate requests, and missing error messages by strengthening server-side checks and client-side feedback.
- Supported MySQL and MongoDB updates by writing safer queries, improving data-cleanup scripts, reviewing schema changes, and validating production data before and after releases.
- Participated in deployment preparation, browser compatibility testing, and regression checks, helping reduce last-minute release issues across small client-facing web projects.
- Collaborated with designers and project managers to convert business requirements into responsive pages, maintainable JavaScript functionality, and practical administrative tools.

Borna Technology

Software Developer Intern

(September 2014 – August 2015)

Tallinn, Estonia

- Assisted senior developers with JavaScript, HTML, CSS, **AngularJS**, Node.js, and Express tasks across internal tools, client websites, and entry-level API-driven applications.
- Built small UI enhancements, reusable page sections, and validation scripts while learning practical debugging, browser compatibility handling, and disciplined Git workflow practices.
- Supported backend development for REST endpoints, form handlers, and database-backed administrative pages using Node.js, Express, MySQL, and MongoDB.

- Investigated layout defects, incorrect form data, and inconsistent API responses by reproducing issues, documenting reliable steps, and preparing targeted fixes for review.
- Contributed to QA checks, deployment notes, and peer reviews, building a strong foundation in professional software delivery, teamwork, maintainability, and production support.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
September 2011 – May 2014

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate
- AWS Certified Developer – Associate
- MongoDB Certified Developer Associate
- Certified Kubernetes Application Developer (CKAD)
- Professional Scrum Developer I (PSD I)

PROJECTS

Cloud-Native Commerce Operations Platform

Designed and delivered an enterprise operations platform using **Angular, Node.js, NestJS, TypeScript, PostgreSQL, Redis, and AWS** for order management, customer support, payments, refunds, and reporting, incorporating secure REST APIs, tenant-aware RBAC, event-driven notifications, idempotent payment processing, structured logging, distributed tracing, and automated CI/CD deployment.

Angular Modernization and API Reliability Program

Led the modernization of legacy AngularJS and jQuery workflows into **Angular standalone components, RxJS, NgRx, reactive forms, and TypeScript**, while restructuring Node.js APIs with stronger validation, transactional outbox processing, standardized error handling, OpenTelemetry observability, automated regression testing, and rollback-ready deployments across staging and production.
