

CRISTOFF STAN

Senior Software Engineer – Angular, Node.js, TypeScript, AWS/GCP

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com

LinkedIn: <https://www.linkedin.com/in/cristoff-s-692816413> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Senior Software Engineer with 10+ years delivering B2B SaaS, e-commerce, and enterprise operations platforms using **Angular 10–18**, **TypeScript 4–5**, **RxJS**, **NgRx**, **Node.js 14–20**, PostgreSQL, and AWS/GCP, combining front-end architecture, secure API design, cloud modernization, performance engineering, and technical leadership to turn complex workflows into scalable, maintainable products with stronger reliability, faster delivery, and measurable business value.

TECHNICAL SKILLS

- **Frontend Engineering:** Angular 10–18, TypeScript 4–5, JavaScript ES6+, RxJS 6–7, NgRx, Angular Signals, Angular Material, PrimeNG, Angular CDK, Nx monorepos, Angular Universal/SSR, standalone components, reactive forms, custom form controls, route guards, HTTP interceptors, lazy loading, virtual scrolling, Storybook, HTML5, SCSS, Tailwind CSS, responsive design, WCAG accessibility.
- **Backend Engineering:** Node.js 14–20, NestJS, Express.js, REST APIs, GraphQL, WebSockets, OpenAPI/Swagger, JWT, OAuth2, RBAC, background workers, API versioning, idempotency, request validation, microservices, modular monoliths, Backend for Frontend, service-layer architecture.
- **Architecture and Integration:** Micro-frontends, domain-driven design, clean architecture, event-driven architecture, CQRS fundamentals, dependency injection, repository patterns, multi-tenant systems, asynchronous processing, outbox patterns, distributed caching, third-party integrations, contract-first API development.
- **Cloud and DevOps:** AWS Lambda, ECS, S3, CloudFront, RDS, SQS, SNS, API Gateway, IAM, CloudWatch; GCP Cloud Run, Cloud Storage, Cloud SQL and Cloud Build; Docker, Kubernetes, Terraform, GitHub Actions, GitLab CI, Jenkins, blue-green deployments, canary releases and rollback planning.
- **Databases and Messaging:** PostgreSQL, MySQL, MongoDB, Redis, DynamoDB, Elasticsearch/OpenSearch, TypeORM, Prisma, Sequelize, Mongoose, SQL optimization, indexing, transactional updates, schema migrations, caching, queues and event-based workflows.
- **Testing and Quality:** Jasmine, Karma, Jest, Angular Testing Library, Cypress, Playwright, Supertest, Mocha, Chai, Postman, contract testing, unit testing, integration testing, end-to-end testing, SonarQube, ESLint, static analysis, code reviews and quality gates.
- **Monitoring and Engineering Practices:** OpenTelemetry, Datadog, New Relic, Sentry, Grafana, Prometheus, structured logging, distributed tracing, bundle analysis, performance profiling, production incident response, root-cause analysis, Agile/Scrum, mentoring, technical discovery and architecture reviews.

WORK EXPERIENCE

BEVY

Senior Software Engineer

(September 2021 – June 2026)

Remote, Romania

- Architected multi-tenant **Angular 10–18** applications with **TypeScript 4–5**, **RxJS**, and **NgRx**, establishing domain-based modules, lazy-loaded routes, reusable libraries, and consistent release standards across B2B SaaS product teams.
- Modernized legacy Angular modules that relied on deeply nested subscriptions, mutable shared services, and oversized components into standalone features, typed reactive forms, selectors, effects, and clearer container-presentational boundaries.
- Reduced median page-interaction time by **36%** by applying route-level code splitting, virtual scrolling, OnPush change detection, memoized selectors, deferred data loading, and targeted bundle analysis on operations-heavy screens.
- Built secure **Node.js 14–20** and **NestJS** services with PostgreSQL, Redis, JWT/OAuth2, and tenant-aware RBAC, supporting audit trails, configurable workflows, and reliable integration with external customer systems.
- Resolved production memory growth caused by unreleased RxJS subscriptions and long-lived Node.js event listeners by adding teardown patterns, heap profiling, bounded caches, worker shutdown hooks, and regression monitoring.
- Led phased upgrades from older Angular and Node.js baselines, replacing deprecated libraries, converting fragile NgModules where appropriate, updating build pipelines, and validating compatibility through staged canary releases.
- Designed reusable Angular component libraries with **Storybook**, Angular Material, design tokens, accessibility rules, and typed input contracts, reducing duplicated UI behavior across customer portals and internal administration tools.
- Implemented event-driven workflows with **AWS SQS**, Lambda, PostgreSQL outbox records, and idempotent consumers, preventing duplicate notifications and inconsistent status updates during retries or partial downstream failures.
- Strengthened delivery pipelines with **GitHub Actions**, Docker, Terraform, SonarQube, and environment-specific approvals, adding automated tests, dependency scans, bundle budgets, migration checks, and rollback-ready deployment steps.
- Mentored engineers through architecture reviews, pull-request feedback, incident analysis, and production-readiness sessions, improving Angular consistency, API contract discipline, debugging quality, and ownership of operational outcomes.

Syscom Digital

Software Engineer

(October 2019 – August 2021)

Remote, Romania

- Developed responsive **Angular 6–10** dashboards and **Node.js 10–14** APIs for digital commerce and internal operations platforms, balancing rapid feature delivery with maintainable modules, predictable state management, and clear service boundaries.
- Implemented order, payment, returns, and customer-support workflows using Angular reactive forms, NgRx, Express.js, PostgreSQL, Redis, and third-party REST integrations with strict validation and recoverable error handling.
- Reduced recurring checkout and webhook failures by **27%** by introducing idempotency keys, retry-safe handlers, request correlation IDs, signature verification, and structured logs around asynchronous payment-provider callbacks.

- Migrated JavaScript-heavy Angular code toward **TypeScript 3–4**, defining DTOs, discriminated response models, shared validators, and typed API adapters that exposed schema mismatches before they reached production.
- Fixed rendering delays in large customer and transaction tables by adding virtual scrolling, server-side pagination, trackBy functions, memoized selectors, and narrower observable streams instead of refreshing complete page state.
- Created reusable HTTP interceptors, route guards, error handlers, and authentication utilities for token renewal, rate-limit responses, and standardized API failures, making client behavior consistent across product modules.
- Replaced selected jQuery widgets and manually managed DOM flows with Angular components, reactive forms, and tested services while preserving legacy business rules and minimizing disruption during incremental releases.
- Built **Jenkins** and GitLab CI pipelines with unit tests, Docker image builds, environment configuration checks, database migration gates, and staged deployment scripts for development, QA, and production environments.
- Partnered with product owners, QA engineers, and designers during refinement and release validation, translating ambiguous commerce rules into technical tasks, acceptance criteria, test scenarios, and support documentation.

Soft Build

Software Developer

(June 2016 – July 2019)

Remote, Romania

- Built full-stack features initially with **AngularJS 1.4–1.7** and later **Angular 4–7**, supported by Node.js, Express.js, MySQL, MongoDB, and Redis for e-commerce, booking, and business administration products.
- Improved initial page-load performance by **38%** by replacing heavy jQuery interactions, introducing lazy-loaded Angular features, compressing assets, reducing API payloads, and applying browser and proxy caching rules.
- Developed REST APIs for inventory, appointment, reporting, and customer-management modules, separating routing, validation, business rules, and persistence through service-layer and repository-style patterns.
- Resolved production defects involving duplicated form submissions, stale inventory quantities, and inconsistent user sessions by adding submission guards, transactional updates, validation rules, and explicit recovery messages.
- Migrated callback-heavy Node.js code toward Promise-based services and asynchronous workflows where runtime support allowed, reducing nested error handling and making downstream failures easier to trace and retry safely.
- Created reusable Angular form controls, modal workflows, table components, and dashboard widgets that standardized validation, loading states, permissions, and layout behavior across multiple customer-facing applications.
- Added **Jasmine**, Karma, Jest, and Mocha coverage around pricing calculations, authentication middleware, form validators, and critical API endpoints, reducing regressions during frequent client-specific configuration changes.
- Worked with senior engineers on SQL indexing, slow-query analysis, deployment scripts, browser compatibility, and code reviews, building strong production discipline across front-end delivery and backend service maintenance.

Decima Digital

Software Developer

(November 2015 – April 2016)

Remote, Estonia

- Delivered AngularJS, JavaScript, and Node.js features for content-driven business websites, supporting reusable page templates, administrative workflows, and REST-style data access for small and mid-sized clients.
- Maintained legacy screens built with HTML, CSS, jQuery, and AngularJS while separating tightly coupled DOM logic into controllers, services, directives, and reusable validation behavior for safer incremental changes.
- Built small Express.js services for form submissions, notification routing, file metadata, and content APIs, improving separation between browser behavior, server-side validation, and database operations.
- Fixed production defects involving broken validation, inconsistent file uploads, duplicate requests, and missing error messages by strengthening server-side checks and returning clearer client-facing failure states.
- Supported MySQL and MongoDB updates by writing safer queries, data-cleanup scripts, and migration checks, then validating record counts and edge cases before changes were promoted to customer environments.
- Participated in deployment preparation, cross-browser regression testing, and release verification, helping identify configuration mismatches and last-minute defects before they affected client-facing websites.
- Collaborated with designers and project managers to convert business requirements into responsive pages, maintainable AngularJS components, administrative tools, and practical delivery estimates for short project cycles.

Borna Technology

Software Developer Intern

(September 2014 – August 2015)

Tallinn, Estonia

- Assisted senior developers with AngularJS, JavaScript, HTML, CSS, Node.js, and Express.js tasks across internal tools, client websites, and introductory API-driven business applications.
- Built small UI enhancements, reusable page sections, basic directives, and validation scripts while learning practical debugging, browser compatibility handling, source control discipline, and code-review expectations.
- Supported backend work for REST endpoints, form handlers, and database-backed administration pages using Node.js, Express.js, MySQL, and MongoDB under close technical guidance.
- Helped investigate layout defects, incorrect form data, and inconsistent API responses by reproducing issues, isolating browser and server conditions, and documenting reliable steps for senior engineers.
- Contributed to QA checks, deployment notes, and peer reviews, gaining a practical foundation in professional software delivery, teamwork, maintainable coding standards, and production support responsibilities.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
September 2011 – May 2014

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate
- AWS Certified Developer – Associate
- Certified Kubernetes Application Developer — CKAD
- MongoDB Certified Developer Associate
- Professional Scrum Developer I — PSD I

PROJECTS

Multi-Tenant Operations Portal Modernization

Led the modernization of a legacy operations portal into an **Angular 18**, TypeScript, Nx, NgRx, and Angular Material architecture supported by NestJS, PostgreSQL, Redis, and AWS services. Introduced standalone components, lazy-loaded domains, typed reactive forms, reusable data grids, tenant-aware authorization, audit history, automated testing, bundle budgets, and gradual migration routes that allowed legacy and modern modules to operate safely during the transition.

Event-Driven Commerce and Customer Support Platform

Designed an Angular and Node.js platform that unified order management, payments, returns, customer communications, and operational reporting through secure REST APIs and event-driven services. Implemented PostgreSQL outbox processing, Redis caching, SQS-based workers, webhook idempotency, payment reconciliation, structured logging, distributed tracing, and production dashboards to prevent duplicate transactions and improve support visibility during provider failures.
