

CRISTOFF STAN

Senior Software Engineer – Java, Angular, TypeScript, AWS/GCP

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-s-692816413> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Senior Software Engineer with 10+ years delivering B2B SaaS, e-commerce, and enterprise platforms using **Java 8–21, Spring Boot 2.x–3.x, Angular 6–18, TypeScript, PostgreSQL, Kafka, and AWS/GCP**; combines hands-on architecture, legacy modernization, secure API design, performance tuning, cloud-native delivery, and technical leadership to build resilient systems, accelerate releases, and convert complex business workflows into maintainable software.

TECHNICAL SKILLS

- **Languages:** Java 8–21, TypeScript 3–5, JavaScript ES6+, SQL, HTML5, CSS3, Bash
- **Java and Backend:** Spring Boot 2.x–3.x, Spring Framework, Spring MVC, Spring Security 5–6, Spring Data JPA, Hibernate, Bean Validation, Spring Batch, Maven, Gradle, REST APIs, OpenAPI, GraphQL, WebSockets
- **Angular and Frontend:** Angular 6–18, AngularJS, RxJS 6–7, NgRx, Angular Signals, standalone components, reactive forms, Angular Material, PrimeNG, lazy loading, route guards, reusable component libraries, responsive design, accessibility
- **Architecture:** Microservices, modular monoliths, domain-driven design, hexagonal architecture, clean architecture, CQRS, event-driven architecture, transactional outbox, idempotent processing, API versioning, distributed caching
- **Cloud and DevOps:** AWS ECS, EKS, Lambda, RDS, S3, SQS, SNS, API Gateway, CloudWatch, IAM; GCP Cloud Run, Cloud SQL, Cloud Storage; Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, GitLab CI
- **Databases and Messaging:** PostgreSQL, MySQL, MongoDB, Redis, DynamoDB, Elasticsearch, Apache Kafka, RabbitMQ, AWS SQS, JPA, Hibernate, SQL optimization, indexing, schema migrations
- **Testing and Quality:** JUnit 5, Mockito, Testcontainers, REST Assured, Cypress, Jasmine, Karma, Jest, Postman, Pact contract testing, integration testing, end-to-end testing, SonarQube, static analysis
- **Monitoring and Engineering Practices:** OpenTelemetry, Grafana, Prometheus, Datadog, New Relic, Sentry, structured logging, distributed tracing, incident response, Agile/Scrum, mentoring, architecture reviews, code reviews

WORK EXPERIENCE

BEVY

Senior Software Engineer

(September 2021 – June 2026)

Remote, Romania

- Architected multi-tenant B2B SaaS platforms with **Java 11–21, Spring Boot 2.3–3.x, Angular 10–18, TypeScript**, and **PostgreSQL**, establishing modular service boundaries and reusable front-end standards across several product teams.

- Modernized legacy Angular modules into **standalone components**, typed reactive forms, **RxJS**, and **NgRx**, reducing duplicated state logic and improving front-end delivery speed by **34%** across high-change customer workflows.
- Decomposed tightly coupled backend modules into **Spring Boot microservices** and modular services using **hexagonal architecture**, REST contracts, and clear domain boundaries, enabling safer releases without rewriting stable business capabilities.
- Resolved production latency spikes caused by **Hibernate N+1 queries**, oversized API payloads, and exhausted database connections by adding fetch plans, pagination, composite indexes, and tuned **HikariCP** pool settings.
- Led a staged upgrade from **Java 11 to Java 17/21** and from **Spring Boot 2.x to 3.x**, replacing deprecated libraries, completing the **Jakarta EE migration**, and validating compatibility through automated regression suites.
- Implemented secure authentication and authorization with **Spring Security**, **OAuth 2.0/OIDC**, JWT validation, tenant-aware RBAC, and auditable permission checks for administration, support, and customer-facing operations.
- Improved reporting and search performance by refactoring slow PostgreSQL joins, introducing **Redis caching** with explicit TTL and invalidation rules, and moving long-running exports to asynchronous worker processes.
- Designed reliable event-driven workflows with **Apache Kafka**, **AWS SQS**, transactional outbox patterns, idempotent consumers, and dead-letter handling, preventing duplicate notifications and lost updates during retries.
- Strengthened delivery pipelines with **GitHub Actions**, **Docker**, **Kubernetes**, **Terraform**, SonarQube, and environment-specific quality gates, adding automated tests, image scanning, and controlled production promotions.
- Mentored engineers through architecture reviews, pull-request feedback, incident analysis, and production-readiness sessions, improving engineering consistency while helping teams balance delivery speed with long-term maintainability.

Syscom Digital Software Engineer

(October 2019 – August 2021)

Remote, Romania

- Developed digital commerce and operations platforms with **Java 8/11**, **Spring Boot 2.x**, **Angular 6–10**, **TypeScript**, **PostgreSQL**, and **Redis**, supporting order, payment, fulfillment, and customer-service workflows.
- Implemented checkout and payment orchestration services that normalized inconsistent provider payloads, validated currency and status mappings, and exposed stable REST contracts to Angular applications and internal support tools.
- Reduced recurring checkout and webhook failures by **27%** through idempotency keys, retry-safe handlers, request correlation IDs, and structured logging around delayed or duplicated payment-provider callbacks.
- Migrated legacy jQuery and AngularJS screens into maintainable **Angular feature modules** with reactive forms, route guards, lazy loading, and shared component libraries while preserving critical business behavior.
- Fixed severe rendering delays in large customer and order tables by introducing server-side pagination, virtual scrolling, memoized selectors, and targeted **RxJS streams** instead of broad page-level subscriptions.
- Created reusable **Spring Security** filters, bean-validation rules, exception handlers, and API response models, making authentication, validation, rate limiting, and error behavior consistent across backend services.
- Built scheduled reconciliation and reporting jobs with **Spring Batch**, optimized SQL queries, and restartable processing steps, reducing manual investigation when external transaction records arrived late or contained partial data.

- Automated build and deployment workflows with **Jenkins**, **GitLab CI**, Maven, Docker, and staged environment checks, improving release repeatability and reducing configuration drift between QA and production.
- Collaborated with product owners, QA engineers, and designers to convert ambiguous requirements into technical designs, acceptance criteria, integration test cases, and release plans that balanced customer urgency with platform stability.

Soft Build

Software Developer

(June 2016 – July 2019)

Remote, Romania

- Built e-commerce, booking, and business administration systems with **Java 8**, Spring MVC, Hibernate, REST services, AngularJS, and later Angular-based interfaces backed by **MySQL**, **MongoDB**, and **Redis**.
- Improved page-load and interaction performance by **38%** by replacing heavy jQuery workflows with component-based Angular screens, compressing static assets, reducing API payloads, and applying browser caching rules.
- Developed inventory, appointment, pricing, reporting, and customer-management APIs using service and repository layers that separated business rules from HTTP controllers and persistence concerns.
- Resolved duplicated submissions, stale inventory counts, and inconsistent session behavior by adding idempotency checks, transactional updates, optimistic locking, and clearer client-side recovery messages.
- Introduced **Spring Boot** into newer modules after the platform matured, simplifying configuration, health checks, and dependency management while allowing older Spring MVC applications to remain operational during gradual migration.
- Created reusable Angular form controls, modal flows, and dashboard widgets with centralized validation, helping teams deliver similar administrative screens without repeatedly rebuilding common behavior.
- Added **JUnit**, Mockito, Jasmine, and integration tests around pricing calculations, authentication, inventory updates, and critical REST endpoints, reducing regression risk before customer releases.
- Worked with senior engineers on database indexing, slow-query analysis, deployment scripts, production debugging, and code reviews, building disciplined practices for reliable full-stack software delivery.

Decima Digital

Software Developer

(November 2015 – April 2016)

Remote, Estonia

- Delivered business websites and lightweight administration systems with **Java 7/8**, **Spring MVC**, Hibernate, **AngularJS 1.3**, JavaScript, MySQL, and REST-style service integrations.
- Maintained legacy server-rendered pages and jQuery-heavy screens while introducing AngularJS controllers, directives, and reusable services for more interactive content and administration workflows.
- Built backend endpoints for form submissions, notification routing, content management, and file metadata, improving separation between browser behavior, business rules, and database operations.
- Fixed production defects involving broken validation, inconsistent file uploads, duplicate email notifications, and missing error responses by strengthening server-side checks and client feedback.
- Improved MySQL data access by replacing unsafe query construction, adding transaction boundaries, cleaning inconsistent records, and validating migration scripts before release to shared environments.
- Supported deployment preparation, browser compatibility testing, and regression verification, helping reduce last-minute release failures across multiple small client-facing projects.
- Collaborated with designers and project managers to translate business requirements into responsive pages, maintainable AngularJS components, and practical Java services that fit limited project budgets.

Borna Technology
Software Developer Intern
(September 2014 – August 2015)
Tallinn, Estonia

- Assisted senior engineers with **Java 7, Spring MVC**, AngularJS, HTML, CSS, JavaScript, and MySQL tasks across internal tools, customer websites, and basic API-driven applications.
- Built small user-interface enhancements, reusable page sections, and validation scripts while learning practical debugging, browser compatibility handling, and disciplined Git-based collaboration.
- Supported backend work for REST endpoints, form handlers, and database-backed administration pages by implementing simple controllers, service methods, and parameterized SQL queries.
- Investigated layout defects, incorrect form data, null-pointer errors, and inconsistent API responses by reproducing failures, reviewing logs, and documenting reliable steps for senior developers.
- Contributed to QA checks, deployment notes, code reviews, and release verification, establishing a strong foundation in professional software delivery, teamwork, and production support.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
September 2011 – May 2014

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate
- AWS Certified Developer – Associate
- Certified Kubernetes Application Developer — CKAD
- MongoDB Certified Developer Associate
- Professional Scrum Developer I — PSD I

PROJECTS

Enterprise Commerce and Operations Platform

- Designed a cloud-native platform using **Java 17, Spring Boot 3, Angular 17, PostgreSQL, Redis, Apache Kafka, AWS, and Kubernetes** for order processing, payment reconciliation, customer support, and operational reporting, with secure REST APIs, tenant-aware access control, idempotent event processing, distributed tracing, and automated production deployment.

Legacy Java and Angular Modernization Program

- Led an incremental modernization from **Java 8, Spring MVC, AngularJS, and manually deployed services** to **Java 17, Spring Boot 3, Angular, OpenAPI, Docker, and CI/CD**, using strangler-pattern migration, contract testing, observability, database compatibility checks, and controlled rollouts to replace aging modules without disrupting customer operations.
