

CRISTOFF STAN

Senior Software Engineer – Java, Vue, TypeScript, AWS/GCP

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-s-692816413> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Senior Software Engineer with 10+ years delivering B2B SaaS, e-commerce, and enterprise platforms using **Java 8–21, Spring Boot 1.5–3.x, Vue.js 2–3, TypeScript 3–5, PostgreSQL, Kafka, and AWS**; combines hands-on architecture, legacy modernization, API and UI performance tuning, cloud-native delivery, and technical leadership to build secure, resilient products that reduce operational risk and accelerate measurable business outcomes.

TECHNICAL SKILLS

- **Backend Engineering:** Java 8–21, Spring Boot 1.5–3.x, Spring MVC, Spring WebFlux, Spring Security, Spring Data JPA, Hibernate, Maven, Gradle, Lombok, MapStruct, REST APIs, GraphQL, WebSockets, background jobs, microservices and modular monoliths.
- **Frontend Engineering:** Vue.js 2–3, TypeScript 3–5, JavaScript ES6+, Composition API, Options API, Pinia, Vuex, Vue Router, Nuxt.js 2–3, Vuetify, Tailwind CSS, Vite, Webpack, reusable component libraries, responsive design and accessibility.
- **Architecture and Integration:** Domain-Driven Design, hexagonal architecture, clean architecture, CQRS, event-driven architecture, API gateways, OAuth 2.0, OIDC, JWT, RBAC, multi-tenancy, saga patterns, outbox patterns, idempotency and contract-first API design.
- **Cloud and DevOps:** AWS ECS, EKS, Lambda, API Gateway, RDS, S3, CloudFront, SQS, SNS, IAM and CloudWatch; GCP Cloud Run, Cloud SQL and Cloud Storage; Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, GitLab CI and SonarQube.
- **Databases and Messaging:** PostgreSQL, MySQL, MongoDB, DynamoDB, Redis, Elasticsearch/OpenSearch, Apache Kafka, RabbitMQ, Flyway, Liquibase, schema design, indexing, query optimization, caching and transactional data processing.
- **Testing and Quality:** JUnit 5, Mockito, AssertJ, Testcontainers, WireMock, REST Assured, Spring Boot Test, Vitest, Jest, Vue Test Utils, Cypress, Playwright, Pact, integration testing, contract testing and end-to-end testing.
- **Monitoring and Reliability:** OpenTelemetry, Micrometer, Prometheus, Grafana, Datadog, New Relic, Sentry, ELK/OpenSearch, distributed tracing, structured logging, production incident response, root-cause analysis and alert optimization.
- **Senior Engineering Practices:** Technical leadership, architecture reviews, mentoring, code reviews, production readiness, performance engineering, secure coding, Agile delivery, technical estimation, stakeholder communication and cross-functional planning.

WORK EXPERIENCE

BEVY

Senior Software Engineer

(September 2021 – June 2026)

Remote, Romania

- Architected multi-tenant enterprise applications using **Java 11/17/21, Spring Boot 2.x–3.x, Vue.js 2.6–3.x, TypeScript 4–5, PostgreSQL, and AWS**, establishing modular service boundaries and reusable frontend standards across several product teams.
- Modernized a legacy Java monolith into domain-oriented **Spring Boot microservices**, extracting account, billing, reporting, and notification capabilities through staged migration, compatibility endpoints, and contract-based validation.
- Migrated complex Vue 2 screens to **Vue 3, Composition API, Pinia, Vite, and TypeScript**, reducing duplicated state-management logic and improving frontend feature delivery speed by 35% across high-change product modules.
- Resolved severe production latency caused by Hibernate N+1 queries, oversized API responses, missing database indexes, and repeated calculations by introducing projections, fetch plans, composite indexes, and Redis caching.
- Implemented event-driven workflows with **Apache Kafka**, PostgreSQL outbox records, idempotent consumers, retry policies, and dead-letter processing to prevent duplicate notifications and inconsistent downstream updates.
- Led upgrades from **Java 11 to Java 17/21** and from **Spring Boot 2.x to 3.x**, replacing deprecated libraries, migrating `javax` dependencies to `jakarta`, and addressing breaking changes through automated regression testing.
- Built secure REST and GraphQL services with **Spring Security, OAuth 2.0, OIDC, JWT, tenant-aware RBAC, audit logging, and rate limiting** for customer-facing and administrative operations.
- Improved Vue dashboard responsiveness by virtualizing large tables, implementing server-side filtering, splitting route bundles, caching reference data, and eliminating unnecessary component re-renders.
- Strengthened CI/CD workflows with **GitHub Actions, Docker, Terraform, AWS ECS, SonarQube, Testcontainers, and automated deployment approvals**, reducing manual release tasks and improving production consistency.
- Mentored engineers through architecture reviews, pull-request feedback, debugging sessions, incident retrospectives, and production-readiness reviews that improved code quality and reduced avoidable release defects.

Syscom Digital

Software Engineer

(October 2019 – August 2021)

Remote, Romania

- Developed responsive digital commerce and operations platforms using **Java 8/11, Spring Boot 2.x, Vue.js 2.6, TypeScript 3–4, PostgreSQL, and Redis**, balancing rapid delivery with maintainable service boundaries.
- Implemented checkout, payment, refund, order-tracking, and customer-support workflows using **Spring MVC, Spring Data JPA, Vuex, Vue Router, and third-party REST integrations**.
- Reduced recurring payment callback and webhook failures by **28%** through idempotency keys, signature validation, correlation IDs, retry-safe handlers, and structured error classification around external provider responses.
- Investigated inventory mismatches caused by concurrent updates and delayed payment events, then introduced optimistic locking, transactional boundaries, and scheduled reconciliation jobs to restore accurate availability.

- Migrated JavaScript Vue modules into **TypeScript**, defining shared interfaces, validation rules, typed API clients, and predictable state mutations that reduced runtime data-shape errors.
- Fixed performance issues in large administration tables by replacing deep watchers, simplifying computed properties, introducing server-side pagination, and removing unnecessary Vuex state duplication.
- Created reusable Spring filters and exception handlers for authentication, request tracing, validation, rate limiting, and standardized API error responses across multiple backend services.
- Expanded delivery pipelines with **Jenkins, GitLab CI, Docker, automated tests, Flyway migration checks, and staged deployments** across development, QA, and production environments.
- Collaborated with product owners, QA engineers, designers, and support teams to convert ambiguous commerce requirements into testable stories, resilient workflows, and production-ready acceptance criteria.

Soft Build

Software Developer

(June 2016 – July 2019)

Remote, Romania

- Built full-stack applications with **Java 8, Spring MVC 4.x, Spring Boot 1.5–2.x, Vue.js, MySQL, MongoDB, and Redis** for e-commerce, appointment booking, reporting, and administration workflows.
- Improved page-load and interaction performance by **37%** by replacing heavy jQuery behaviors with Vue components, reducing API payload sizes, compressing static assets, and implementing browser caching.
- Developed REST APIs for inventory, appointment, pricing, reporting, and customer-management modules using controller, service, and repository layers to keep business rules maintainable.
- Resolved duplicated form submissions, stale inventory values, and inconsistent user sessions by adding server-side validation, transactional updates, idempotency checks, and explicit frontend recovery states.
- Introduced reusable Vue forms, modal workflows, validation utilities, and dashboard components that helped teams deliver similar operational screens without repeatedly rebuilding common behavior.
- Refactored blocking integration logic into scheduled jobs and asynchronous processing where appropriate, improving throughput for email delivery, report generation, and external data synchronization.
- Added **JUnit, Mockito, Jest, Vue Test Utils, and integration tests** around pricing calculations, authentication filters, persistence repositories, and critical API endpoints.
- Worked with senior engineers on slow-query analysis, database indexing, deployment scripts, code reviews, and production incident fixes, developing disciplined Java and frontend engineering practices.

Decima Digital

Software Developer

(November 2015 – April 2016)

Remote, Estonia

- Delivered **Java 7/8, Spring MVC, JavaScript, HTML, CSS, and SQL** functionality for content-driven websites, administration tools, business forms, and lightweight service integrations.
- Maintained legacy screens built with jQuery and server-rendered templates while introducing modular JavaScript components for interactive forms, search interfaces, and administrative workflows.
- Built Spring controllers and service classes for form processing, notification routing, content retrieval, file handling, and basic account-management operations.
- Fixed production defects involving broken validation, failed file uploads, null-pointer exceptions, and missing user feedback by strengthening backend checks and client-side error handling.
- Supported MySQL and MongoDB updates by writing safer queries, cleanup utilities, and validation reports that allowed data corrections to be reviewed before production deployment.
- Participated in deployment preparation, browser compatibility testing, smoke checks, and rollback planning, helping reduce last-minute release issues across client-facing applications.

- Collaborated with designers and project managers to translate business requirements into responsive interfaces, maintainable Java services, and practical implementation estimates.

Borna Technology

Software Developer Intern

(September 2014 – August 2015)

Tallinn, Estonia

- Assisted senior engineers with **Java 7/8, Spring MVC, JavaScript, HTML, CSS, and MySQL** tasks across internal tools, client websites, and basic API-backed business applications.
- Built small UI enhancements, reusable page sections, and validation scripts while learning structured debugging, browser compatibility handling, and clean Git collaboration practices.
- Supported backend development for REST endpoints, form handlers, database-backed administration pages, and server-side validation using Java, Spring, and MySQL.
- Investigated layout defects, incorrect form submissions, null-pointer errors, and inconsistent API responses by reproducing problems and documenting reliable steps for senior developers.
- Contributed to QA checks, deployment notes, and code reviews, establishing a strong foundation in professional software delivery, maintainability, teamwork, and production support.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,

September 2011 – May 2014

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate
- AWS Certified Developer – Associate
- Certified Kubernetes Application Developer — CKAD
- MongoDB Certified Developer Associate
- Professional Scrum Developer I — PSD I

PROJECTS

Cloud-Native Commerce and Operations Platform

- Designed a multi-tenant commerce platform using **Java 17, Spring Boot, Vue 3, TypeScript, Pinia, PostgreSQL, Redis, Kafka, and AWS** to support order management, payment reconciliation, inventory, customer support, reporting, audit history, and event-driven notifications.
- Implemented **idempotent APIs, Kafka-based processing, PostgreSQL outbox events, tenant-aware authorization, distributed tracing, Testcontainers integration tests, and containerized delivery pipelines** for reliable production operation.

Enterprise Java and Vue Modernization Program

- Led the migration of a legacy Java and jQuery application into **Spring Boot 3 services and a Vue 3 frontend**, replacing tightly coupled modules with documented APIs, typed contracts, reusable components, and independently deployable services.

- Resolved outdated dependencies, inefficient Hibernate queries, inconsistent authentication, fragile schema migrations, oversized frontend bundles, and limited production visibility through **OAuth 2.0, Flyway, Vite, code splitting, OpenTelemetry, and automated testing**.
