

# CRISTOFF STAN

Senior Software Engineer – PHP, React, Angular, Vue.js

Location: Tallinn, Harjumaa, Estonia | Email: [cristoffstan@gmail.com](mailto:cristoffstan@gmail.com)  
LinkedIn: <https://www.linkedin.com/in/cristoff-s-692816413> | Phone Number: +372 58619311

## PROFESSIONAL SUMMARY

Senior Software Engineer with 10+ years delivering B2B SaaS, e-commerce, and enterprise platforms using **PHP 7.4–8.3, Symfony 5–7, Laravel 8–11, React 16–18, Angular 8–17, Vue.js 2–3, PostgreSQL, Redis, and AWS**; combines backend architecture, modern frontend engineering, legacy modernization, API performance, cloud delivery, and technical leadership to build secure, scalable products that reduce operational risk and accelerate measurable business outcomes.

## TECHNICAL SKILLS

- **PHP and Backend Engineering:** PHP 7.4–8.3, Symfony 5–7, Laravel 8–11, API Platform, Doctrine ORM, Eloquent ORM, Composer, PHPUnit, PHPStan, Psalm, Rector, Symfony Messenger, Laravel Queues, Monolog, REST APIs, GraphQL and WebSockets.
- **React Engineering:** React 16–18, TypeScript, JavaScript ES6+, Redux Toolkit, React Query, Zustand, Next.js, React Hook Form, Material UI, Tailwind CSS, Storybook, responsive design, accessibility and reusable component libraries.
- **Angular Engineering:** Angular 8–17, TypeScript, RxJS, NgRx, Angular Material, reactive forms, route guards, interceptors, standalone components, lazy-loaded modules, Angular Signals and change-detection optimization.
- **Vue.js Engineering:** Vue.js 2–3, Composition API, Options API, Pinia, Vuex, Vue Router, Nuxt.js, Vuetify, Vite, reusable composables, component libraries, form validation and state-management architecture.
- **Architecture and Integration:** Microservices, modular monoliths, Domain-Driven Design, clean architecture, hexagonal architecture, CQRS, event-driven architecture, API gateways, transactional outbox, saga workflows, idempotent processing and multi-tenancy.
- **Security and Identity:** OAuth 2.0, OpenID Connect, JWT, RBAC, tenant-aware authorization, API keys, rate limiting, CSRF protection, input validation, secrets management, audit logging and least-privilege access.
- **Databases and Messaging:** PostgreSQL, MySQL, MariaDB, MongoDB, DynamoDB, Redis, Elasticsearch/OpenSearch, RabbitMQ, Apache Kafka, AWS SQS, database migrations, indexing, query optimization and distributed caching.
- **Cloud and DevOps:** AWS ECS, EKS, Lambda, API Gateway, RDS, S3, CloudFront, SQS, SNS and CloudWatch; Docker, Kubernetes, Terraform, Helm, GitHub Actions, GitLab CI, Jenkins, Argo CD and SonarQube.
- **Testing and Quality:** PHPUnit, Pest, Behat, Mockery, Infection, Testcontainers, Jest, React Testing Library, Jasmine, Karma, Vitest, Vue Test Utils, Cypress, Playwright, contract testing and end-to-end testing.
- **Monitoring and Reliability:** OpenTelemetry, Prometheus, Grafana, Datadog, New Relic, Sentry, Elastic Stack, structured logging, distributed tracing, service-level monitoring, incident response and root-cause analysis.
- **Senior Engineering Practices:** Architecture reviews, technical leadership, mentoring, code reviews, performance engineering, legacy modernization, production readiness, Agile delivery, estimation and stakeholder communication.

---

## WORK EXPERIENCE

---

### BEVY

#### Senior Software Engineer

(September 2021 – June 2026)

*Remote, Romania*

- Architected multi-tenant enterprise platforms using **PHP 7.4–8.3, Symfony 5–7, Laravel 8–11, React 17–18, Angular 12–17, Vue.js 2–3, PostgreSQL, Redis, and AWS**, establishing reusable backend and frontend standards across several product teams.
- Modernized a tightly coupled PHP monolith into domain-oriented **Symfony and Laravel services**, extracting billing, account, reporting, and notification capabilities through staged migration, compatibility endpoints, and contract validation.
- Rebuilt high-change customer workflows with **React, Angular, and Vue.js**, selecting each framework according to product constraints and improving frontend delivery speed by **36%** through shared TypeScript models and design-system components.
- Resolved production latency caused by Doctrine N+1 queries, missing PostgreSQL indexes, repeated permission calculations, and oversized API responses by introducing projections, pagination, query caching, and Redis-backed authorization data.
- Implemented event-driven processing with **Symfony Messenger, Laravel Queues, RabbitMQ, Kafka, transactional outbox records, idempotent consumers, and dead-letter queues**, preventing duplicate notifications and inconsistent downstream updates.
- Led upgrades from legacy PHP services to **PHP 8.1–8.3**, replacing deprecated libraries, introducing strict types and typed properties, applying Rector-assisted refactoring, and validating behavior through staged regression testing.
- Built secure REST and GraphQL APIs with **OAuth 2.0, OIDC, JWT, tenant-aware RBAC, audit logging, rate limits, and secrets management** for administrative and customer-facing business operations.
- Improved large React, Angular, and Vue.js dashboards through virtualized tables, server-side filtering, route-level code splitting, memoized selectors, optimized change detection, and removal of unnecessary reactive subscriptions.
- Strengthened CI/CD workflows with **GitHub Actions, Docker, Kubernetes, Terraform, PHPUnit, PHPStan, SonarQube, and Testcontainers**, automating quality gates, schema migrations, image scans, approvals, and controlled rollouts.
- Mentored engineers through architecture reviews, pull-request feedback, production debugging, incident retrospectives, and release-readiness sessions that improved consistency across PHP and frontend codebases.

### Syscom Digital

#### Software Engineer

(October 2019 – August 2021)

*Remote, Romania*

- Developed commerce and operations applications using **PHP 7.2–8.0, Symfony 4.4–5, Laravel 6–8, React 16, Angular 8–10, Vue.js 2.6, PostgreSQL, and Redis**, balancing rapid feature delivery with maintainable service boundaries.
- Implemented checkout, payment, refund, order-tracking, and customer-support workflows through **Symfony, Laravel, Doctrine, Eloquent, Redux, NgRx, Vuex, and third-party payment APIs**.
- Reduced recurring webhook and payment callback failures by **29%** through idempotency keys, provider signature validation, correlation IDs, retry-safe handlers, and structured classification of external integration errors.

- Investigated inventory mismatches caused by concurrent updates and delayed payment events, then introduced database locking, transactional writes, compensating jobs, and scheduled reconciliation reports.
- Created canonical DTOs and provider adapters for payment, shipping, tax, and customer-data integrations, preventing external schema differences from leaking into internal business modules.
- Fixed frontend performance issues by eliminating unnecessary React renders, applying Angular `trackBy` and OnPush patterns, removing expensive Vue watchers, and moving complex filtering into backend queries.
- Built reusable middleware for authentication, request tracing, validation, throttling, exception handling, and standardized API error responses across Symfony and Laravel services.
- Expanded delivery pipelines with **Jenkins, GitLab CI, Docker, PHPUnit, JavaScript tests, migration validation, and staged deployments** across development, QA, and production environments.
- Collaborated with product owners, QA engineers, designers, support teams, and external vendors to convert unclear commerce requirements into explicit contracts and production-ready acceptance criteria.

## Soft Build

### Software Developer

(June 2016 – July 2019)

*Remote, Romania*

- Built full-stack business applications using **PHP 5.6–7.3, Symfony 3–4, Laravel 5, React 15–16, AngularJS and Angular, Vue.js 2, MySQL, PostgreSQL, and Redis** for commerce, booking, reporting, and administration.
- Improved page-load and interaction performance by **38%** by replacing jQuery-heavy interfaces with modular React, Angular, and Vue components while reducing payload sizes and optimizing static-asset caching.
- Developed REST APIs for inventory, appointment scheduling, pricing, authentication, reporting, and customer management using layered controllers, services, repositories, and domain models.
- Resolved duplicate form submissions, stale inventory values, partial database updates, and inconsistent sessions by adding transactional writes, idempotency checks, validation guards, and recovery jobs.
- Moved email delivery, report generation, import processing, and external synchronization into **Symfony Console commands, Laravel queues, and RabbitMQ workers**, reducing blocking request times and improving retry visibility.
- Created reusable forms, modal workflows, validation utilities, route guards, and dashboard components across the three frontend frameworks without forcing unrelated products into a single UI architecture.
- Added **PHPUnit, Mockery, Jest, Jasmine, Karma, and integration tests** around pricing rules, authentication middleware, repositories, and high-risk API workflows to reduce regression risk.
- Worked with senior engineers on SQL execution plans, database indexing, Linux deployments, code reviews, memory diagnostics, and production incident resolution across data-intensive applications.

## Decima Digital

### Software Developer

(November 2015 – April 2016 )

*Remote, Estonia*

- Delivered business functionality using **PHP 5.6, Symfony 2.8, Laravel 5, AngularJS, JavaScript, jQuery, MySQL, and PostgreSQL** for customer-facing websites, administrative tools, and content-management workflows.
- Maintained server-rendered Twig and Blade templates while introducing AngularJS controllers and modular JavaScript components for interactive forms, search screens, file management, and administration features.
- Built controllers, service classes, repositories, form handlers, and scheduled commands for account workflows, content retrieval, file uploads, notifications, and operational reporting.

- Fixed production defects involving undefined indexes, null database values, failed uploads, malformed requests, encoding errors, and missing user feedback through stronger validation and exception handling.
- Improved slow database operations by reviewing ORM-generated SQL, removing unnecessary object hydration, adding targeted indexes, and replacing repeated row updates with bulk queries.
- Integrated email, document-storage, mapping, and customer-data providers through reusable adapters that normalized responses and isolated external configuration from core business logic.
- Participated in Linux deployment preparation, browser testing, smoke checks, database backup verification, log review, and rollback planning for several client-facing releases.

## Borna Technology

### Software Developer Intern

(September 2014 – August 2015)

Tallinn, Estonia

- Assisted senior engineers with **PHP 5.x, Symfony 2, JavaScript, jQuery, HTML, CSS, MySQL, Git, and Linux** tasks across internal tools, client websites, and data-driven business applications.
- Supported backend development for controllers, form handlers, administration pages, JSON endpoints, database queries, and server-side validation under guidance from experienced developers.
- Built small interface enhancements, reusable templates, validation scripts, and data-import utilities while learning structured debugging, browser compatibility handling, and clean Git practices.
- Investigated invalid submissions, PHP warnings, database connectivity failures, broken layouts, and inconsistent JSON responses by reproducing issues and documenting reliable diagnostic steps.
- Contributed to QA checks, deployment notes, smoke tests, code reviews, and technical documentation, establishing a practical foundation in maintainable full-stack delivery and production support.

---

## EDUCATION

---

### Tallinn University

Bachelor's Degree in Computer Science,

September 2011 – May 2014

---

## CERTIFICATIONS

---

- **AWS Certified Solutions Architect – Associate**
- **AWS Certified Developer – Associate**
- **MongoDB Certified Developer Associate**
- **Certified Kubernetes Application Developer (CKAD)**
- **Professional Scrum Developer I (PSD I)**

---

## PROJECTS

---

### Multi-Framework Enterprise Operations Platform

- Designed a modular platform using **PHP 8.3, Symfony 7, Laravel 11, React 18, Angular 17, Vue 3, PostgreSQL, Redis, RabbitMQ, and AWS** for account management, payments, reporting, customer support, and administrative workflows.
- Used **React** for data-intensive operational dashboards, **Angular** for structured internal workflow modules, and **Vue.js** for independently embedded customer tools while sharing OpenAPI contracts, TypeScript models, authentication, and design tokens.

- Implemented idempotent APIs, tenant-aware RBAC, transactional outbox processing, distributed tracing, contract tests, containerized deployment, and automated database migration gates for reliable production delivery.

### **Legacy PHP and Frontend Modernization Program**

- Led the migration of a legacy **PHP 5, Symfony 2, jQuery, and AngularJS** platform into **PHP 8.3 services with modern React, Angular, and Vue applications**, preserving business behavior through incremental replacement.
- Resolved deprecated dependencies, inefficient ORM queries, inconsistent authentication, fragile migrations, duplicated frontend logic, and limited observability through **Rector, Doctrine optimization, OIDC, OpenAPI, OpenTelemetry, and automated testing**.
- Introduced reusable backend service templates, centralized exception handling, API versioning, typed DTOs, frontend component standards, CI quality gates, and Kubernetes-based deployment practices.
