

CRISTOFF STAN

Senior Software Engineer – Python, React, AWS, Azure

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-s-692816413> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Senior Software Engineer with 10+ years delivering B2B SaaS, e-commerce, and enterprise platforms using **Python 3.5–3.12, Django 1.11–5.x, FastAPI, React 16.8–18, TypeScript 3–5, PostgreSQL, Redis, and AWS/Azure**; combines cloud-native architecture, legacy modernization, API and UI performance engineering, CI/CD, and technical leadership to build secure, scalable products that improve reliability, delivery speed, and business operations.

TECHNICAL SKILLS

- **Backend Engineering:** Python 3.8–3.12, Django 3.2–5.x, Django REST Framework, FastAPI, Flask, Pydantic, SQLAlchemy, Alembic, Celery, Gunicorn, Uvicorn, asyncio, WebSockets, GraphQL, REST APIs, background processing and scheduled workloads.
- **Frontend Engineering:** React 16.8–18, TypeScript 3–5, JavaScript ES6+, Redux Toolkit, React Query, Zustand, Next.js, React Hook Form, Material UI, Tailwind CSS, Storybook, responsive design, accessibility and reusable component libraries.
- **Architecture and Integration:** Microservices, modular monoliths, Domain-Driven Design, clean architecture, hexagonal architecture, CQRS, event-driven architecture, API gateways, OAuth 2.0, OpenID Connect, JWT, RBAC, multi-tenancy, saga patterns, transactional outbox and idempotent processing.
- **Cloud Platforms:** AWS Lambda, ECS, EKS, API Gateway, RDS, S3, CloudFront, SQS, SNS, EventBridge, IAM and CloudWatch; Azure Functions, App Service, AKS, Service Bus, API Management, PostgreSQL, Blob Storage, Key Vault and Application Insights.
- **DevOps and Infrastructure:** Docker, Kubernetes, Terraform, Helm, GitHub Actions, GitLab CI, Jenkins, Azure DevOps, Poetry, pip, virtual environments, SonarQube, container scanning, infrastructure as code and automated deployment approvals.
- **Databases and Messaging:** PostgreSQL, MySQL, MongoDB, DynamoDB, Redis, Elasticsearch/OpenSearch, Apache Kafka, RabbitMQ, AWS SQS, Azure Service Bus, SQL optimization, indexing, schema migrations, connection pooling and distributed caching.
- **Testing and Quality:** Pytest, unittest, Hypothesis, Factory Boy, Testcontainers, Locust, Postman, Pact, Jest, React Testing Library, Cypress, Playwright, integration testing, contract testing, end-to-end testing and static analysis.
- **Monitoring and Reliability:** OpenTelemetry, Prometheus, Grafana, Datadog, New Relic, Sentry, Elastic Stack, AWS CloudWatch, Azure Application Insights, structured logging, distributed tracing, alert tuning, incident response and root-cause analysis.
- **Senior Engineering Practices:** Architecture reviews, technical leadership, mentoring, code reviews, legacy modernization, performance engineering, secure development, production readiness, Agile delivery, technical estimation and stakeholder communication.

WORK EXPERIENCE

BEVY

Senior Software Engineer

(September 2021 – June 2026)

Remote, Romania

- Architected multi-tenant enterprise applications using **Python 3.8–3.12, Django, FastAPI, React 16.8–18, TypeScript, PostgreSQL, and AWS/Azure**, establishing scalable service boundaries and reusable frontend standards across several product teams.
- Modernized a tightly coupled Django platform into domain-oriented **FastAPI and Django REST Framework services**, extracting account, billing, reporting, and notification capabilities through staged migration and compatibility APIs.
- Rebuilt legacy class-based React modules with **functional components, hooks, Redux Toolkit, React Query, and strict TypeScript**, improving frontend delivery speed by **35%** across frequently changed customer workflows.
- Resolved production latency caused by inefficient Django ORM joins, N+1 queries, oversized responses, and repeated calculations by introducing `select_related`, projections, pagination, PostgreSQL indexes, and Redis caching.
- Implemented event-driven processing with **Kafka, Celery, RabbitMQ, transactional outbox records, idempotent workers, retry policies, and dead-letter queues**, preventing duplicated notifications and inconsistent downstream updates.
- Led upgrades from older Python and Django services to **Python 3.11/3.12 and Django 4.x/5.x**, replacing unsupported packages, updating typing rules, and validating behavior through staged regression and load testing.
- Built secure REST and GraphQL APIs with **OAuth 2.0, OIDC, JWT, tenant-aware RBAC, audit logging, secrets management, and rate limiting** for administrative and customer-facing operations.
- Improved React dashboard responsiveness by virtualizing large tables, introducing server-side filtering, splitting route bundles, caching reference data, and removing unnecessary renders from complex reporting screens.
- Strengthened CI/CD workflows with **GitHub Actions, Docker, Kubernetes, Terraform, Pytest, SonarQube, and Testcontainers**, automating quality checks, database migrations, image scans, approvals, and controlled production rollouts.
- Mentored engineers through architecture reviews, pull-request feedback, debugging sessions, incident retrospectives, and production-readiness reviews that improved code consistency and reduced preventable release defects.

Syscom Digital

Software Engineer

(October 2019 – August 2021)

Remote, Romania

- Developed responsive commerce and operations platforms using **Python 3.7–3.9, Django 2.2–3.2, Flask, React 16.x, TypeScript 3–4, PostgreSQL, and Redis**, balancing rapid feature delivery with maintainable application boundaries.
- Implemented checkout, payment, refund, order-tracking, and customer-support workflows using **Django REST Framework, SQLAlchemy, Redux, React Router, Celery, and third-party payment integrations**.
- Reduced recurring webhook and payment callback failures by **29%** through idempotency keys, signature verification, correlation IDs, retry-safe handlers, and structured error classification around external provider responses.

- Investigated inventory inconsistencies caused by concurrent requests and delayed payment events, then introduced row-level locking, transactional updates, and scheduled reconciliation jobs to restore accurate stock availability.
- Migrated loosely typed JavaScript modules into **TypeScript**, defining shared interfaces, typed API clients, validation schemas, and predictable Redux transitions that reduced runtime response-shape errors.
- Fixed performance problems in large administration tables by eliminating unnecessary renders, memoizing selectors, moving filtering into optimized backend queries, and introducing server-side pagination.
- Created reusable Django and Flask middleware for authentication, request tracing, validation, rate limiting, exception handling, and standardized API responses across multiple business services.
- Expanded delivery pipelines with **Jenkins, GitLab CI, Docker, Pytest, database migration checks, and staged deployments** across development, QA, and production environments.
- Collaborated with product owners, QA engineers, designers, and support teams to transform unclear commerce requirements into testable stories, resilient workflows, and production-ready acceptance criteria.

Soft Build

Software Developer

(June 2016 – July 2019)

Remote, Romania

- Built full-stack business applications using **Python 3.5–3.7, Django 1.11–2.2, Flask, React 15–16, PostgreSQL, MySQL, MongoDB, and Redis** for commerce, booking, reporting, and administrative workflows.
- Improved page-load and interaction performance by **38%** by replacing jQuery-heavy screens with React components, reducing API payload sizes, compressing static assets, and introducing browser caching rules.
- Developed REST APIs for inventory, appointment, pricing, reporting, and customer-management modules using controller, service, repository, and serializer layers to keep business rules maintainable.
- Resolved duplicated submissions, stale inventory values, and inconsistent user sessions by adding server-side validation, transactional updates, idempotency checks, and explicit frontend recovery states.
- Refactored blocking email, report generation, and synchronization processes into **Celery background tasks**, improving request response times while adding retries and operational visibility for failed jobs.
- Created reusable React forms, modal workflows, validation helpers, route guards, and dashboard components that enabled teams to deliver similar business screens without rebuilding common behavior.
- Added **Pytest, unittest, Jest, Enzyme, and integration tests** around pricing calculations, authentication middleware, persistence repositories, and critical API endpoints to reduce regression risk.
- Worked with senior engineers on SQL execution plans, database indexing, deployment scripts, code reviews, and production incident fixes, developing disciplined Python and frontend engineering practices.

Decima Digital

Software Developer

(November 2015 – April 2016)

Remote, Estonia

- Delivered business functionality using **Python 2.7/3.4, Django 1.7, JavaScript, jQuery, HTML, CSS, PostgreSQL, and MySQL** for customer-facing websites, administration tools, and content-management workflows.
- Maintained server-rendered Django templates and legacy jQuery modules while introducing modular JavaScript patterns for interactive forms, search interfaces, file management, and administrative workflows.

- Built Django views, service utilities, forms, and data-access components for content retrieval, form processing, file uploads, notifications, and basic account-management operations.
- Fixed production defects involving broken validation, failed uploads, encoding errors, missing database values, and unclear user feedback by strengthening backend checks and frontend error handling.
- Improved slow database operations by reviewing generated ORM queries, removing unnecessary object loading, adding indexes, and replacing repeated loops with targeted SQL and bulk updates.
- Participated in deployment preparation, browser compatibility testing, smoke checks, Linux configuration, and rollback planning, helping reduce last-minute release issues across client applications.
- Collaborated with designers and project managers to convert business requirements into responsive interfaces, maintainable Django modules, and practical implementation estimates.

Borna Technology

Software Developer Intern

(September 2014 – August 2015)

Tallinn, Estonia

- Assisted senior engineers with **Python 2.7/3.3, Django 1.5, JavaScript, HTML, CSS, PostgreSQL, and MySQL** tasks across internal tools, client websites, and basic data-driven applications.
- Built small UI enhancements, reusable Django templates, and validation scripts while learning structured debugging, browser compatibility handling, and clean Git collaboration practices.
- Supported backend development for Django views, form handlers, database-backed administration pages, and server-side validation using Python, Django ORM, PostgreSQL, and MySQL.
- Investigated layout defects, invalid form submissions, Python exceptions, and inconsistent JSON responses by reproducing problems and documenting reliable diagnostic steps for senior developers.
- Contributed to QA checks, deployment notes, and code reviews, establishing a strong foundation in professional software delivery, maintainability, teamwork, and production support.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,

September 2011 – May 2014

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate
- AWS Certified Developer – Associate
- Certified Kubernetes Application Developer — CKAD
- MongoDB Certified Developer Associate
- Professional Scrum Developer I — PSD I

PROJECTS

Cloud-Native Operations and Workflow Platform

- Designed a multi-tenant operations platform using **Python 3.12, FastAPI, React 18, TypeScript, PostgreSQL, Redis, Kafka, and AWS EKS** to support order management, payment reconciliation, customer service, reporting, audit history, and asynchronous notifications.

- Implemented **idempotent APIs, transactional outbox processing, tenant-aware authorization, distributed tracing, Testcontainers integration tests, and containerized CI/CD pipelines**, improving reliability across financial and operational workflows.

Enterprise Python and React Modernization Program

- Led the migration of a legacy **Django, Python 2.7, and jQuery** application into **Python 3.12, Django 5, FastAPI services, and a React 18 frontend**, replacing tightly coupled modules with documented APIs, typed contracts, and reusable components.
- Resolved outdated dependencies, inefficient ORM queries, inconsistent authentication, fragile schema migrations, oversized frontend bundles, and limited production visibility through **OIDC, Alembic, code splitting, OpenTelemetry, and automated testing**.
