

CRISTOFF STAN

Senior Software Engineer – Python, Vue, AWS, Azure

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-s-692816413> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Senior Software Engineer with 10+ years delivering B2B SaaS, e-commerce, and enterprise operations platforms using **Python 3.8–3.12, Django 3–5, FastAPI, Vue.js 2–3, TypeScript 3–5, PostgreSQL, Redis, Kafka, and AWS/Azure**; combines cloud-native architecture, legacy modernization, API and UI performance engineering, CI/CD, and technical leadership to build secure, resilient products that improve reliability, delivery speed, and business operations.

TECHNICAL SKILLS

- **Backend Engineering:** Python 3.8–3.12, Django 3–5, Django REST Framework, FastAPI, Flask, Pydantic, SQLAlchemy, Alembic, Celery, asyncio, Gunicorn, Uvicorn, WebSockets, GraphQL, REST APIs, background workers and scheduled processing.
- **Frontend Engineering:** Vue.js 2–3, TypeScript 3–5, JavaScript ES6+, Composition API, Options API, Pinia, Vuex, Vue Router, Nuxt.js, Vuetify, Tailwind CSS, Vite, Webpack, HTML5, CSS3, reusable component libraries, responsive design and accessibility.
- **Architecture and Integration:** Microservices, modular monoliths, Domain-Driven Design, clean architecture, hexagonal architecture, CQRS, event-driven architecture, API gateways, OAuth 2.0, OpenID Connect, JWT, RBAC, multi-tenancy, transactional outbox and idempotency.
- **Cloud Platforms:** AWS Lambda, ECS, EKS, API Gateway, RDS, S3, CloudFront, SQS, SNS, EventBridge, IAM and CloudWatch; Azure Functions, App Service, AKS, Service Bus, API Management, PostgreSQL, Blob Storage, Key Vault and Application Insights.
- **DevOps and Infrastructure:** Docker, Kubernetes, Terraform, Helm, GitHub Actions, GitLab CI, Jenkins, Azure DevOps, Poetry, pip, SonarQube, infrastructure as code, container scanning, release approvals and automated deployment pipelines.
- **Databases and Messaging:** PostgreSQL, MySQL, MongoDB, DynamoDB, Redis, Elasticsearch/OpenSearch, Apache Kafka, RabbitMQ, AWS SQS, Azure Service Bus, SQL optimization, indexing, schema migrations, connection pooling and distributed caching.
- **Testing and Quality:** Pytest, unittest, Hypothesis, Factory Boy, Testcontainers, Locust, Vitest, Jest, Vue Test Utils, Cypress, Playwright, Pact, contract testing, integration testing, end-to-end testing and static analysis.
- **Monitoring and Reliability:** OpenTelemetry, Prometheus, Grafana, Datadog, New Relic, Sentry, Elastic Stack, AWS CloudWatch, Azure Application Insights, structured logging, distributed tracing, alert tuning and root-cause analysis.
- **Senior Engineering Practices:** Architecture reviews, technical leadership, mentoring, code reviews, legacy modernization, performance engineering, secure development, production readiness, Agile delivery, technical estimation and stakeholder communication.

WORK EXPERIENCE

BEVY

Senior Software Engineer

(September 2021 – June 2026)

Remote, Romania

- Architected multi-tenant enterprise platforms using **Python 3.8–3.12, Django 3.2–5, FastAPI, Vue.js 2–3, TypeScript, PostgreSQL, and AWS/Azure**, defining scalable service boundaries and reusable frontend standards across several product teams.
- Modernized a tightly coupled Django platform into domain-oriented **FastAPI and Django REST Framework services**, extracting account, billing, reporting, and notification capabilities through staged migration and compatibility APIs.
- Migrated legacy Vue 2 feature modules to **Vue 3, Composition API, Pinia, Vite, and strict TypeScript**, reducing duplicated state-management logic and improving frontend delivery speed by **36%** across frequently changed workflows.
- Resolved production latency caused by inefficient Django ORM joins, N+1 queries, oversized API responses, and repeated calculations by introducing projections, pagination, PostgreSQL indexes, and Redis caching.
- Implemented event-driven processing with **Kafka, Celery, RabbitMQ, transactional outbox records, idempotent workers, retry policies, and dead-letter queues**, preventing duplicate notifications and inconsistent downstream updates.
- Led upgrades to **Python 3.11/3.12 and Django 4/5**, replacing unsupported packages, strengthening type validation, updating container images, and validating behavior through regression and load testing.
- Built secure REST and GraphQL APIs with **OAuth 2.0, OIDC, JWT, tenant-aware RBAC, audit logging, secrets management, and rate limiting** for administrative and customer-facing operations.
- Improved Vue dashboard responsiveness by virtualizing large tables, introducing server-side filtering, splitting route bundles, caching reference data, and eliminating expensive deep watchers and redundant component updates.
- Strengthened CI/CD workflows with **GitHub Actions, Docker, Kubernetes, Terraform, Pytest, SonarQube, and Testcontainers**, automating quality checks, schema migrations, image scans, approvals, and production rollouts.
- Mentored engineers through architecture reviews, pull-request feedback, incident analysis, and production-readiness sessions that improved engineering consistency and reduced avoidable release defects.

Syscom Digital

Software Engineer

(October 2019 – August 2021)

Remote, Romania

- Developed commerce and operations platforms using **Python 3.6–3.9, Django 2.2–3.2, Flask, Vue.js 2.x, TypeScript, PostgreSQL, and Redis**, balancing rapid feature delivery with maintainable application boundaries.
- Implemented checkout, payment, refund, order-tracking, and customer-support workflows using **Django REST Framework, SQLAlchemy, Vuex, Vue Router, Celery, and third-party payment integrations**.
- Reduced recurring webhook and payment callback failures by **29%** through idempotency keys, signature verification, correlation IDs, retry-safe handlers, and structured error classification around provider responses.
- Investigated inventory inconsistencies caused by concurrent requests and delayed payment events, then introduced row-level locking, transactional updates, and scheduled reconciliation jobs to restore accurate stock availability.

- Migrated loosely typed Vue modules into **TypeScript**, defining shared interfaces, typed API clients, validation models, and predictable Vuex mutations that reduced production response-shape errors.
- Fixed performance problems in large administration tables by replacing deep watchers, simplifying computed properties, introducing server-side pagination, and removing duplicated state from Vuex modules.
- Created reusable Django and Flask middleware for authentication, request tracing, input validation, rate limiting, exception handling, and standardized API responses across multiple business services.
- Expanded delivery pipelines with **Jenkins, GitLab CI, Docker, Pytest, database migration checks, and staged deployments** across development, QA, and production environments.
- Collaborated with product owners, QA engineers, designers, and support teams to transform unclear commerce requirements into testable stories, resilient workflows, and production-ready acceptance criteria.

Soft Build

Software Developer

(June 2016 – July 2019)

Remote, Romania

- Built full-stack business applications using **Python 3.4–3.7, Django 1.8–2.2, Flask, JavaScript, later Vue.js, PostgreSQL, MySQL, and Redis** for commerce, booking, reporting, and administration workflows.
- Improved page-load and interaction performance by **38%** by replacing jQuery-heavy screens with modular Vue components, reducing API payload sizes, compressing static assets, and introducing browser caching rules.
- Developed REST APIs for inventory, appointment, pricing, reporting, and customer-management modules using service, repository, and serializer layers to keep complex business rules maintainable.
- Resolved duplicated submissions, stale inventory values, and inconsistent user sessions by adding server-side validation, transactional updates, idempotency checks, and explicit frontend recovery states.
- Refactored blocking email, report-generation, and synchronization processes into **Celery background tasks**, improving request response times while adding retries and visibility for failed jobs.
- Created reusable Vue forms, modal workflows, validation components, route guards, and dashboard widgets that enabled teams to deliver similar business screens without rebuilding common behavior.
- Added **Pytest, unittest, Jest, Vue Test Utils, and integration tests** around pricing calculations, authentication middleware, repositories, and critical API endpoints to reduce regression risk.
- Worked with senior engineers on SQL execution plans, database indexing, Linux deployment scripts, code reviews, and production incident fixes, developing disciplined Python and frontend engineering practices.

Decima Digital

Software Developer

(November 2015 – April 2016)

Remote, Estonia

- Delivered business functionality using **Python 2.7/3.4, Django 1.7, JavaScript, jQuery, HTML, CSS, PostgreSQL, and MySQL** for customer-facing websites, administration tools, and content-management workflows.
- Maintained server-rendered Django templates and legacy jQuery modules while introducing modular JavaScript patterns for interactive forms, search interfaces, file management, and administrative workflows.
- Built Django views, service utilities, forms, and data-access components for content retrieval, form processing, file uploads, notification delivery, and basic account-management operations.
- Fixed production defects involving broken validation, failed uploads, encoding errors, missing database values, and unclear user feedback by strengthening backend checks and frontend error handling.

- Improved slow database operations by reviewing generated ORM queries, removing unnecessary object loading, adding indexes, and replacing repeated record loops with targeted SQL and bulk updates.
- Participated in deployment preparation, browser compatibility testing, smoke checks, Linux configuration, and rollback planning, helping reduce last-minute release issues across client applications.
- Collaborated with designers and project managers to convert business requirements into responsive interfaces, maintainable Django modules, and practical implementation estimates.

Borna Technology

Software Developer Intern

(September 2014 – August 2015)

Tallinn, Estonia

- Assisted senior engineers with **Python 2.7/3.3, Django 1.5, JavaScript, HTML, CSS, PostgreSQL, and MySQL** tasks across internal tools, client websites, and basic data-driven business applications.
- Built small UI enhancements, reusable Django templates, and validation scripts while learning structured debugging, browser compatibility handling, and clean Git collaboration practices.
- Supported backend development for Django views, form handlers, database-backed administration pages, and server-side validation using Python, Django ORM, PostgreSQL, and MySQL.
- Investigated layout defects, invalid form submissions, Python exceptions, and inconsistent JSON responses by reproducing problems and documenting reliable diagnostic steps for senior developers.
- Contributed to QA checks, deployment notes, and code reviews, establishing a strong foundation in professional software delivery, maintainability, teamwork, and production support.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,

September 2011 – May 2014

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate
- AWS Certified Developer – Associate
- Microsoft Certified: Azure Developer Associate
- Certified Kubernetes Application Developer — CKAD
- Professional Scrum Developer I — PSD I

PROJECTS

Cloud-Native Operations and Workflow Platform

- Designed a multi-tenant operations platform using **Python 3.12, FastAPI, Vue 3, TypeScript, Pinia, PostgreSQL, Redis, Kafka, and AWS EKS** to support order management, payment reconciliation, customer service, reporting, audit history, and asynchronous notifications.
- Implemented **idempotent APIs, transactional outbox processing, tenant-aware authorization, distributed tracing, Testcontainers integration tests, and containerized CI/CD pipelines**, improving reliability across financial and operational workflows.

Enterprise Python and Vue Modernization Program

- Led the migration of a legacy **Python 2.7, Django, and jQuery** application into **Python 3.12, Django 5, FastAPI services, and a Vue 3 frontend**, replacing tightly coupled modules with documented APIs, typed contracts, reusable components, and independently deployable workloads.
- Resolved outdated dependencies, inefficient ORM queries, inconsistent authentication, fragile schema migrations, oversized frontend bundles, and limited production visibility through **OIDC, Alembic, Vite, code splitting, OpenTelemetry, and automated testing**.
