

CRISTOFF STAN

Senior Software Engineer – React, TypeScript, AWS/GCP

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-s-692816413> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Senior Software Engineer with 10+ years delivering B2B SaaS, e-commerce, and enterprise platforms with **React 16.8–18, TypeScript 3–5, Next.js 12–14, Node.js 12–20, and AWS/GCP**, specializing in scalable design systems, complex state management, frontend modernization, API integration, performance tuning, and cloud delivery that improve product reliability, engineering velocity, and user experience.

TECHNICAL SKILLS

- **Frontend Engineering:** React 16.8–18, TypeScript 4–5, JavaScript ES6+, Next.js 12–14, React Hooks, Server Components fundamentals, Redux Toolkit, TanStack Query, Zustand, Context API, React Router, React Hook Form, Storybook, HTML5, CSS3, Sass, Tailwind CSS, Material UI.
- **Frontend Architecture:** Component-driven development, design systems, micro-frontends, reusable component libraries, feature-based architecture, server-state management, client-state normalization, typed API clients, responsive design, accessibility, WCAG, internationalization, browser compatibility.
- **Performance Engineering:** React Profiler, Chrome DevTools, bundle analysis, code splitting, lazy loading, memoization, list virtualization, pagination, caching, Core Web Vitals, image optimization, rendering analysis, memory-leak investigation.
- **Backend and API Integration:** Node.js 12–20, Express.js, NestJS, REST APIs, GraphQL, WebSockets, OpenAPI, JWT, OAuth 2.0, RBAC, API versioning, background jobs, microservices, event-driven workflows.
- **Cloud and DevOps:** AWS Lambda, ECS, S3, CloudFront, API Gateway, RDS, SQS, SNS, CloudWatch, IAM, GCP Cloud Run, Cloud SQL, Docker, Kubernetes, Terraform, GitHub Actions, GitLab CI, Jenkins.
- **Data and Messaging:** PostgreSQL, MySQL, MongoDB, DynamoDB, Redis, Elasticsearch/OpenSearch, Prisma, TypeORM, Sequelize, Mongoose, SQL optimization, indexing, caching, message queues.
- **Testing and Quality:** Jest, Vitest, React Testing Library, Cypress, Playwright, MSW, Supertest, contract testing, integration testing, end-to-end testing, ESLint, Prettier, SonarQube, static analysis.
- **Monitoring and Engineering Practices:** Sentry, Datadog, New Relic, OpenTelemetry, Grafana, Prometheus, structured logging, Agile/Scrum, architecture reviews, technical mentoring, code reviews, incident response, release planning.

WORK EXPERIENCE

BEVY

Senior Software Engineer

(September 2021 – June 2026)

Remote, Romania

- Architected customer-facing **React** and **TypeScript** applications for multi-tenant B2B SaaS workflows, establishing modular feature boundaries, reusable UI foundations, and stable **REST** and **GraphQL contracts** across several product teams.

- Modernized legacy **React 16.8** class components into **React 18**, function components, hooks, **Redux Toolkit**, and **TanStack Query**, reducing duplicated state logic and increasing front-end delivery speed by **32%**.
- Designed predictable client-state and server-state patterns with **Redux Toolkit**, **React Query**, **Zustand**, typed selectors, and normalized caches, eliminating stale-data defects across complex administration workflows.
- Resolved slow rendering in data-heavy dashboards by introducing row virtualization, memoized selectors, route-level code splitting, lazy loading, and payload pagination for screens processing tens of thousands of records.
- Delivered **Next.js 12–14** features using server-side rendering, incremental static regeneration, middleware, and authenticated routing to improve discoverability, startup performance, and secure content delivery.
- Built supporting **Node.js 14–20** and **NestJS** services with PostgreSQL, Redis, WebSockets, JWT/OAuth2, and tenant-aware authorization, giving React applications consistent and auditable business APIs.
- Diagnosed production memory growth, duplicate event subscriptions, and failed background refreshes through **Chrome DevTools**, **heap snapshots**, **Sentry**, and structured logs, then corrected cleanup and retry behavior.
- Established a layered quality strategy with **Jest**, **React Testing Library**, **Cypress**, **Playwright**, **MSW**, and contract tests, covering critical user journeys without coupling tests to implementation details.
- Strengthened cloud delivery through **GitHub Actions**, **Docker**, **Terraform**, **AWS**, and **GCP** release controls, adding automated validation, preview environments, image scanning, and staged production approvals.
- Led frontend architecture reviews, mentored engineers on component design and debugging, and partnered with product and design leaders to convert ambiguous workflows into maintainable **React solutions**.

Syscom Digital Software Engineer

(October 2019 – August 2021)

Remote, Romania

- Developed **React 16** and **TypeScript** dashboards with Node.js 10–14 APIs for digital commerce, order management, and customer-support platforms requiring responsive behavior and reliable third-party integrations.
- Reduced recurring checkout and webhook failures by **27%** through idempotency keys, correlation IDs, retry-safe handlers, and clearer UI recovery states around payment-provider responses.
- Migrated business-critical JavaScript modules to **TypeScript 3–4**, defining shared DTOs, discriminated unions, validation schemas, and typed API clients that prevented common runtime data-shape errors.
- Fixed major rendering delays in customer and order tables by replacing broad Redux subscriptions, memoizing derived data, paginating API responses, and virtualizing large result sets.
- Replaced legacy jQuery widgets with tested **React components**, preserving existing business rules while introducing controlled forms, reusable hooks, and clearer ownership of asynchronous state.
- Implemented authentication, validation, rate limiting, and standardized error middleware in **Express.js**, enabling React clients to handle authorization failures and service errors consistently.
- Built automated coverage with **Jest**, **React Testing Library**, **Cypress**, **Supertest**, and mocked service dependencies for checkout, customer-service, and account-management workflows.
- Improved release consistency with **Jenkins**, **GitLab CI**, **Docker**, linting, unit-test gates, and environment-specific deployment scripts across development, QA, and production.
- Worked with product owners, QA engineers, and designers during refinement and release validation, translating incomplete requirements into accessible interfaces and measurable acceptance criteria.

Soft Build

Software Developer

(June 2016 – July 2019)

Remote, Romania

- Built **React-based single-page modules** and Node.js services for e-commerce, booking, inventory, and business-administration products, separating presentation, domain logic, and persistence responsibilities.
- Improved page-load performance by **38%** by replacing heavy jQuery interactions with reusable React components, reducing JavaScript bundles, compressing assets, and optimizing API payloads.
- Developed validated forms, reusable modal workflows, and dashboard widgets for pricing, inventory, appointments, and customer records, reducing repeated implementation across client projects.
- Resolved duplicate submissions, stale inventory values, and inconsistent session behavior by adding client-side submission guards, transactional updates, and explicit error-recovery paths.
- Refactored callback-heavy **Node.js** modules toward Promise-based and asynchronous flows, simplifying nested error handling and making API failures easier to trace and test.
- Created reusable React component patterns for tables, filters, pagination, notifications, and role-aware navigation while maintaining responsive behavior across supported browsers.
- Added **Jest, Mocha, and integration tests** around pricing calculations, authentication middleware, form validation, and critical API endpoints to reduce regression risk before releases.
- Collaborated with senior engineers on SQL indexing, MongoDB query tuning, deployment scripts, pull-request reviews, and production troubleshooting across concurrent customer applications.

Decima Digital

Software Developer

(November 2015 – April 2016)

Remote, Estonia

- Delivered interactive JavaScript modules and early **React proof-of-concept components** for content-driven business sites, validating where component reuse improved maintainability over page-specific scripts.
- Built responsive page templates, administration workflows, and reusable UI behaviors with **HTML5, CSS3, JavaScript, and jQuery** for client-facing marketing and operational websites.
- Created small **Node.js and Express.js services** for form submissions, notification routing, file processing, and REST-style content access, separating browser behavior from server-side workflows.
- Fixed production defects involving broken validation, inconsistent file uploads, duplicate requests, and missing error feedback by strengthening both client-side and server-side checks.
- Supported MySQL and MongoDB applications by improving queries, writing cleanup scripts, validating data migrations, and reviewing database changes before deployment.
- Performed cross-browser regression testing, deployment preparation, and release verification, catching responsive layout and JavaScript compatibility issues before client delivery.
- Partnered with designers and project managers to translate visual concepts and business requirements into maintainable pages, administration tools, and progressively enhanced interactions.

Borna Technology

Software Developer Intern

(September 2014 – August 2015)

Tallinn, Estonia

- Assisted senior developers with **HTML5, CSS3, JavaScript, jQuery, Node.js, and Express.js** tasks across internal tools, client websites, and small API-driven business applications.
- Built reusable page sections, validation scripts, navigation behaviors, and responsive interface enhancements while learning practical debugging and browser-compatibility techniques.
- Supported simple REST endpoints, form handlers, and database-backed administration pages using **Node.js, Express.js, MySQL, and MongoDB** under senior engineering guidance.

- Investigated layout defects, incorrect form data, and inconsistent API responses by reproducing issues, isolating failure conditions, and documenting reliable remediation steps.
- Contributed to QA checks, deployment notes, Git-based code reviews, and release preparation, establishing a strong foundation in collaborative software delivery and production support.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
September 2011 – May 2014

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate
- AWS Certified Developer – Associate
- MongoDB Certified Developer Associate
- Certified Kubernetes Application Developer (CKAD)
- Professional Scrum Developer I (PSD I)

PROJECTS

React Enterprise Operations Platform

- Designed and delivered a multi-tenant operations platform using **React 18, TypeScript, Redux Toolkit, TanStack Query, Node.js, PostgreSQL, Redis, and AWS**, supporting order management, customer service, payment investigation, role-based access, reporting, and real-time operational notifications.
- Created a shared **Storybook design system**, accessible form controls, virtualized data grids, typed API clients, route-level authorization, and automated tests with Jest, React Testing Library, Cypress, and Playwright.

Frontend Modernization and Performance Program

- Led the migration of legacy JavaScript, jQuery, and class-based React workflows into **React 18, TypeScript, functional components, custom hooks, React Query**, and feature-based modules without disrupting active business operations.
- Introduced bundle splitting, lazy loading, list virtualization, memoized selectors, API pagination, Core Web Vitals monitoring, Sentry error tracking, and CI/CD quality gates to improve application speed and release stability.
