

CRISTOFF STAN

Senior Software Engineer – Vue, Node.js, TypeScript, AWS/GCP

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-s-692816413> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Senior Software Engineer with 10+ years delivering B2B SaaS, e-commerce, and enterprise operations platforms using **Vue.js 2.6–3.x**, **Nuxt 2–3**, **Node.js 12–20**, **TypeScript 4–5**, **NestJS**, **PostgreSQL**, and **AWS/GCP**, combining front-end architecture, secure API design, cloud modernization, observability, and technical leadership to improve delivery speed, reliability, maintainability, and measurable customer value across complex production systems.

TECHNICAL SKILLS

- **Frontend Engineering:** Vue.js 2.6–3.x, Nuxt 2–3, TypeScript 4–5, JavaScript ES6+, Composition API, Options API, Pinia, Vuex, Vue Router, VueUse, Vite, Webpack, Storybook, Tailwind CSS, Vuetify, PrimeVue, HTML5, CSS3, responsive architecture, accessibility, design systems.
- **Backend Engineering:** Node.js 12–20, NestJS, Express.js, Fastify, REST APIs, GraphQL, WebSockets, OpenAPI/Swagger, JWT, OAuth 2.0, OpenID Connect, RBAC, API versioning, background workers, scheduled jobs, service-layer architecture, microservices, modular monoliths.
- **Cloud and DevOps:** AWS Lambda, ECS, API Gateway, S3, CloudFront, RDS, SQS, SNS, DynamoDB, CloudWatch, IAM; GCP Cloud Run, Cloud Storage, Cloud SQL, Cloud Build; Docker, Kubernetes, Terraform, GitHub Actions, GitLab CI, Jenkins.
- **Databases and Messaging:** PostgreSQL, MySQL, MongoDB, Redis, DynamoDB, Elasticsearch/OpenSearch, Prisma, TypeORM, Sequelize, Mongoose, SQL optimization, indexing, caching, transactional outbox, asynchronous messaging, event-driven workflows.
- **Testing and Quality:** Vitest, Jest, Vue Test Utils, Cypress, Playwright, Supertest, Mocha, Chai, Postman, contract testing, unit testing, integration testing, end-to-end testing, static analysis, SonarQube, dependency scanning.
- **Monitoring and Reliability:** OpenTelemetry, Datadog, New Relic, Sentry, Grafana, Prometheus, CloudWatch, structured logging, distributed tracing, performance profiling, production incident response, root-cause analysis, service-level monitoring.
- **Architecture and Leadership:** Domain-driven design, hexagonal architecture, CQRS, idempotency, caching strategies, API governance, architecture reviews, Agile/Scrum, technical mentoring, code reviews, release planning, production-readiness assessments.

WORK EXPERIENCE

BEVY

Senior Software Engineer

(September 2021 – June 2026)

Remote, Romania

- Architected customer-facing **Vue.js 2.6–3.x**, **Nuxt 2–3**, and **Node.js 14–20** applications for multi-tenant B2B SaaS workflows, establishing reusable module boundaries, stable API contracts, and release standards across distributed product teams.

- Modernized legacy **Vue 2 Options API** screens into **Vue 3 Composition API**, **Pinia**, and **Vite**, reducing duplicated state logic and improving front-end feature delivery speed by **34%**.
- Built secure **NestJS** and **Express.js** services with **TypeScript**, **PostgreSQL**, **Redis**, and **OAuth 2.0/OIDC**, supporting tenant isolation, granular RBAC, audit trails, and high-volume operational workflows.
- Resolved recurring production memory growth caused by unbounded event listeners, orphaned timers, and queue consumers that failed to close cleanly, using heap snapshots, lifecycle hooks, worker shutdown controls, and Redis TTL policies.
- Led staged upgrades from **Node.js 14** to **Node.js 18/20**, replacing deprecated packages, correcting OpenSSL and ESM compatibility issues, updating Docker base images, and validating releases through automated regression and canary checks.
- Reduced slow API responses by eliminating PostgreSQL N+1 queries, adding composite indexes, batching repeated lookups, and restructuring aggregation logic, bringing critical endpoint p95 latency from 1.8 seconds to under 700 milliseconds.
- Designed a shared **Vue component library** with typed props, composables, Storybook documentation, accessibility rules, and design tokens, keeping complex admin, billing, and reporting screens consistent across products.
- Implemented event-driven workflows with **AWS SQS**, **Lambda**, and the **transactional outbox pattern**, preventing duplicate notifications and lost status changes during retries, partial failures, and downstream service outages.
- Strengthened delivery pipelines with **GitHub Actions**, **Docker**, **Terraform**, AWS/GCP environment checks, automated tests, image scanning, migration validation, and controlled rollback procedures for production releases.
- Mentored engineers through architecture reviews, pull-request feedback, incident debugging, and production-readiness sessions, improving ownership of testing, observability, performance, and operational risk across the team.

Syscom Digital Software Engineer

(October 2019 – August 2021)

Remote, Romania

- Developed responsive **Vue.js 2.6**, **Nuxt 2**, and **Node.js 10–14** applications for digital commerce and internal operations, balancing rapid product delivery with maintainable front-end modules and service boundaries.
- Implemented order, payment, refund, and customer-support workflows using **Express.js**, **PostgreSQL**, **Redis**, and third-party REST integrations, improving transaction visibility and reducing manual reconciliation work.
- Reduced recurring checkout and webhook defects by **29%** through idempotency keys, retry-safe handlers, signed callback validation, request correlation IDs, and structured error logging around payment provider integrations.
- Diagnosed schema mismatches between vendor payloads and internal DTOs that caused undefined totals and failed order updates, then added runtime validation, normalization adapters, and contract-focused integration tests.
- Fixed large-data dashboard freezes by virtualizing table rows, debouncing filters, splitting oversized Vuex modules, and removing unnecessary computed-property recalculations from high-traffic administrative screens.
- Migrated legacy jQuery widgets into reusable **Vue components**, preserving business behavior while introducing controlled forms, centralized state ownership, route guards, and component-level regression coverage.
- Created shared Node.js middleware for authentication, input validation, rate limiting, pagination, and standardized error responses, making API behavior predictable across customer, catalog, and fulfillment modules.

- Built CI/CD workflows with **Jenkins**, **GitLab CI**, and **Docker**, adding unit tests, dependency checks, versioned image builds, database migration gates, and staged deployment scripts for QA and production.
- Collaborated with product owners, QA engineers, and designers to refine ambiguous requirements, document edge cases, estimate technical risk, and convert business workflows into testable acceptance criteria.

Soft Build

Software Developer

(June 2016 – July 2019)

Remote, Romania

- Built full-stack web features with **Vue.js**, **Node.js**, **Express.js**, **MySQL**, **MongoDB**, and **Redis** for e-commerce, booking, inventory, and business administration applications used by small and mid-sized clients.
- Improved page-load performance by **37%** by replacing heavy jQuery interactions with Vue components, compressing static assets, reducing API payload size, lazy-loading routes, and applying browser caching rules.
- Developed REST APIs for inventory, appointments, pricing, reporting, and customer management, separating routing, business rules, and persistence through service-layer patterns that simplified maintenance.
- Resolved production defects involving duplicate form submissions, stale inventory quantities, and inconsistent user sessions by adding request guards, transactional writes, cache invalidation rules, and clearer recovery paths.
- Refactored callback-heavy Node.js modules toward Promise-based and asynchronous workflows, centralizing error handling and preventing several silent failures that previously left background jobs in incomplete states.
- Created reusable Vue forms, modal workflows, filters, and dashboard widgets with shared validation behavior, helping the team deliver similar administrative features without repeatedly rebuilding common UI logic.
- Added **Jest**, **Mocha**, and API integration tests around pricing calculations, authentication middleware, booking rules, and critical endpoints, improving regression detection before customer releases.
- Worked with senior engineers on slow-query analysis, database indexing, Linux deployment scripts, log review, and code quality checks, building strong production discipline across front-end and backend delivery.

Decima Digital

Software Developer

(November 2015 – April 2016)

Remote, Estonia

- Delivered JavaScript and **Node.js** features for content-driven business websites, supporting reusable page templates, administrative workflows, and REST-style data access for multiple client projects.
- Maintained legacy front-end screens built with HTML, CSS, jQuery, and early MVVM patterns while documenting component boundaries that later made migration to modern frameworks less disruptive.
- Built small **Express.js** services for form submissions, notification routing, file metadata, and content APIs, separating browser behavior from server-side validation and persistence concerns.
- Fixed production defects involving broken validation, malformed uploads, missing confirmation messages, and inconsistent browser behavior by strengthening server checks and standardizing client-side error handling.
- Supported MySQL and MongoDB applications by writing safer update queries, creating data-cleanup scripts, validating indexes, and reviewing backup steps before client-facing releases.
- Participated in deployment preparation, cross-browser testing, and regression verification, catching configuration and asset-path problems before they reached production environments.

- Collaborated with designers and project managers to translate business requirements into responsive pages, maintainable JavaScript modules, administrative tools, and clearly scoped delivery tasks.

Borna Technology

Software Developer Intern

(September 2014 – August 2015)

Tallinn, Estonia

- Assisted senior developers with **JavaScript**, **Node.js**, **Express.js**, HTML, and CSS tasks across internal tools, client websites, and small API-driven applications during a structured engineering internship.
- Built reusable page sections, validation scripts, and minor UI enhancements while learning practical debugging, browser compatibility handling, semantic markup, and disciplined Git workflows.
- Supported backend work for simple REST endpoints, form processors, and database-backed admin pages using Node.js, Express.js, MySQL, and MongoDB under senior developer review.
- Investigated layout defects, incorrect form data, and inconsistent API responses by reproducing issues, tracing request payloads, checking logs, and documenting reliable steps for correction.
- Contributed to QA checks, deployment notes, peer reviews, and release preparation, developing a strong foundation in collaborative software delivery, production support, and maintainable coding practices.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,

September 2011 – May 2014

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate
- AWS Certified Developer – Associate
- Certified Kubernetes Application Developer — CKAD
- MongoDB Certified Developer Associate
- Professional Scrum Developer I — PSD I

PROJECTS

Multi-Tenant Commerce Operations Platform

- Designed and delivered a cloud-native operations platform using **Vue 3**, **Nuxt 3**, **Node.js**, **NestJS**, **PostgreSQL**, **Redis**, and **AWS** for order management, customer support, payment reconciliation, inventory visibility, and operational reporting.
- Implemented tenant-aware RBAC, secure REST APIs, retry-safe payment workflows, SQS-based asynchronous processing, transactional outbox delivery, distributed tracing, structured logging, and production dashboards for identifying failed transactions and delayed background jobs.

Vue Modernization and API Reliability Program

- Led the modernization of legacy jQuery and **Vue 2** workflows into **Vue 3**, **Composition API**, **Pinia**, **TypeScript**, and **Vite**, introducing reusable composables, typed API clients, route-level code splitting, accessible UI components, and automated front-end testing.

- Upgraded supporting Node.js services, replaced deprecated dependencies, introduced idempotent request handling, strengthened payload validation, added OpenTelemetry instrumentation, and established safer CI/CD releases with migration checks, canary deployments, and rollback controls.
