

CRISTOFF STAN

Senior Software Engineer – Vue, Node.js, TypeScript, AWS/GCP

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-s-692816413> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Senior Software Engineer with 10+ years delivering B2B SaaS, e-commerce, and enterprise operations platforms using **Vue.js 2.6–3.x**, **Nuxt 2–3**, **TypeScript 4–5**, **Node.js 12–20**, **NestJS**, **PostgreSQL**, and **AWS/GCP**, combining front-end architecture, secure API design, cloud-native delivery, legacy modernization, performance tuning, and technical leadership to build reliable products, accelerate releases, and reduce production risk.

TECHNICAL SKILLS

- **Frontend Engineering:** Vue.js 2.6–3.x, Composition API, Options API, Nuxt 2–3, TypeScript 4–5, JavaScript ES6+, Pinia, Vuex, Vue Router, Vue Query, Vite, Webpack, Storybook, HTML5, CSS3, Tailwind CSS, Vuetify, responsive design, accessibility, design systems, micro-frontends.
- **Backend Engineering:** Node.js 12–20, NestJS, Express.js, REST APIs, GraphQL, WebSockets, OpenAPI, Swagger, JWT, OAuth 2.0, RBAC, background processing, API versioning, microservices, modular monoliths, service-layer architecture.
- **Cloud and DevOps:** AWS Lambda, ECS, API Gateway, S3, CloudFront, RDS, SQS, SNS, CloudWatch, IAM, GCP Cloud Run, Cloud SQL, Cloud Storage, Docker, Kubernetes, Terraform, GitHub Actions, GitLab CI, Jenkins, CI/CD governance.
- **Databases and Messaging:** PostgreSQL, MySQL, MongoDB, Redis, DynamoDB, Elasticsearch, OpenSearch, Prisma, TypeORM, Sequelize, Mongoose, SQL optimization, indexing, caching, transactional outbox, asynchronous messaging.
- **Testing and Quality:** Vitest, Jest, Vue Test Utils, Cypress, Playwright, Supertest, Mocha, Chai, Postman, contract testing, integration testing, end-to-end testing, SonarQube, ESLint, static analysis.
- **Monitoring and Reliability:** OpenTelemetry, Datadog, New Relic, Sentry, Grafana, Prometheus, CloudWatch, structured logging, distributed tracing, alert tuning, production incident response, root-cause analysis.
- **Senior Engineering Practices:** Architecture reviews, technical discovery, system design, code review, mentoring, release planning, performance profiling, secure development, Agile/Scrum, cross-functional leadership, production ownership.

WORK EXPERIENCE

BEVY

Senior Software Engineer

(September 2021 – June 2026)

Remote, Romania

- Architected multi-tenant **B2B SaaS** applications with **Vue 2.6**, **Vue 3**, **TypeScript**, **Node.js**, **NestJS**, **PostgreSQL**, and **Redis**, establishing reusable UI, API, and release patterns across multiple product teams.

- Modernized legacy **Vue 2 Options API** screens into **Vue 3 Composition API** modules with **Pinia and Vue Query**, reducing duplicated state logic and improving front-end delivery speed by **34%**.
- Built secure tenant-aware **REST and GraphQL services** with NestJS, PostgreSQL, Redis, JWT, OAuth 2.0, and role-based access controls for auditable customer and operations workflows.
- Resolved production memory growth caused by unremoved event listeners, oversized client stores, and unbounded Node.js workers by adding lifecycle cleanup, heap profiling, and controlled concurrency.
- Led staged upgrades from **Node.js 14 to Node.js 18 and 20** while replacing deprecated packages, updating Docker images, and validating runtime changes through Jest, Supertest, and canary releases.
- Improved slow search and reporting endpoints by rewriting PostgreSQL joins, adding composite indexes, introducing Redis caching, and reducing repeated aggregation work in service-layer queries.
- Designed a shared **Vue component library** with TypeScript, Storybook, accessibility checks, design tokens, and documented interaction contracts for consistent delivery across customer portals.
- Implemented event-driven workflows with **AWS Lambda, SQS, SNS, and a PostgreSQL outbox pattern**, preventing duplicate notifications and lost updates during retries or partial outages.
- Strengthened **CI/CD pipelines** with GitHub Actions, Docker, Terraform, AWS, and GCP release controls, adding automated tests, image scanning, migration checks, and approval gates.
- Mentored engineers through architecture reviews, production debugging, pull-request feedback, and incident retrospectives, improving maintainability and reducing avoidable release risk.

Syscom Digital Software Engineer

(October 2019 – August 2021)

Remote, Romania

- Developed responsive commerce and operations dashboards with **Vue 2.6, Nuxt 2, TypeScript, Node.js 10–14, Express, PostgreSQL, and Redis** for customer-facing and internal workflows.
- Implemented order, payment, refund, and customer-support flows with REST integrations and transactional persistence, giving operations teams clearer visibility into failed transactions.
- Reduced recurring checkout and webhook failures by **29%** through idempotency keys, retry-safe handlers, request correlation IDs, signature validation, and structured provider error logging.
- Migrated JavaScript modules to **TypeScript 3–4**, introducing typed DTOs, shared validation schemas, and safer API response contracts that caught data-shape mismatches before production.
- Fixed Vue rendering bottlenecks caused by oversized tables, deep watchers, unstable keys, and unnecessary computed recalculation by adding pagination, virtualization, and memoized selectors.
- Created reusable Express middleware for authentication, validation, rate limiting, correlation IDs, and consistent error responses across payment, catalog, and customer modules.
- Replaced legacy jQuery widgets with tested **Vue components** while preserving pricing rules, form behavior, and browser compatibility for business-critical administration screens.
- Built **Jenkins and GitLab CI pipelines** with unit tests, Docker builds, database migration checks, and staged deployments for development, QA, and production environments.
- Collaborated with product owners, QA engineers, and designers to convert incomplete requirements into technical designs, acceptance criteria, rollout plans, and support documentation.

Soft Build Software Developer

(June 2016 – July 2019)

Remote, Romania

- Built e-commerce, booking, and business administration features with JavaScript, **Node.js 6–10, Express, MySQL, MongoDB, and Redis**, progressively adopting Vue 2 for interactive product modules.
- Improved page-load performance by **38%** by replacing heavy jQuery interactions with Vue components, compressing assets, reducing API payloads, and introducing browser caching rules.

- Developed REST APIs for inventory, appointments, reporting, and customer management, separating routing, business rules, and persistence through practical service-layer patterns.
- Resolved duplicated submissions, stale inventory counts, and inconsistent session behavior by adding server-side validation, transactional updates, request tokens, and recovery paths.
- Refactored callback-heavy Node.js services toward Promise-based and asynchronous workflows where supported, simplifying error propagation and making integration failures easier to diagnose.
- Created reusable **Vue form controls, modal workflows, and dashboard widgets** that reduced repeated implementation effort across similar booking and administration screens.
- Added Jest and Mocha coverage for pricing calculations, authentication middleware, inventory updates, and critical endpoints, lowering regression risk during frequent customer releases.
- Worked with senior engineers on index tuning, slow-query reviews, deployment scripts, and production incident analysis, building disciplined delivery and support practices.

Decima Digital **Software Developer**

(November 2015 – April 2016)

Remote, Estonia

- Delivered JavaScript and Node.js features for content-driven business websites, supporting reusable page templates, administration workflows, and REST-style data access patterns.
- Maintained HTML, CSS, jQuery, and early component-based front-end modules while helping define a gradual path toward **Vue.js** for more interactive customer and admin experiences.
- Built lightweight Express services for form submissions, notification routing, file handling, and content APIs, improving separation between browser behavior and server processing.
- Fixed production defects involving broken validation, inconsistent uploads, stale browser state, and missing error feedback by strengthening server checks and client-side recovery.
- Supported MySQL and MongoDB data changes by writing safer queries, cleanup scripts, and verification steps that reduced the chance of corrupting customer-managed content.
- Participated in deployment preparation, cross-browser testing, regression reviews, and release checklists, helping prevent last-minute failures on small client-facing projects.
- Collaborated with designers and project managers to translate business requirements into responsive pages, maintainable JavaScript behavior, and practical administration tools.

Borna Technology **Software Developer Intern**

(September 2014 – August 2015)

Tallinn, Estonia

- Assisted senior developers with **JavaScript, HTML, CSS, Node.js, Express, MySQL, and MongoDB** tasks across internal tools, client websites, and entry-level API-driven applications.
- Built small UI enhancements, reusable page sections, and validation scripts while learning browser compatibility debugging, source control discipline, and maintainable coding practices.
- Supported REST endpoints, form handlers, and database-backed administration pages with Node.js, Express, MySQL, and MongoDB under structured code-review guidance.
- Investigated layout defects, incorrect form data, and inconsistent API responses by reproducing issues, documenting evidence, and preparing focused fixes for senior review.
- Contributed to QA checks, deployment notes, and peer reviews, establishing a strong foundation in professional delivery, collaborative engineering, and production support.

EDUCATION

Tallinn University

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate
- AWS Certified Developer – Associate
- Certified Kubernetes Application Developer — CKAD
- MongoDB Certified Developer Associate
- Professional Scrum Developer I — PSD I

PROJECTS

Multi-Tenant Commerce Operations Platform

- Architected a cloud-native operations platform using **Vue 3, Nuxt 3, TypeScript, Pinia, NestJS, PostgreSQL, Redis, and AWS**, supporting order management, payment reconciliation, customer service, reporting, tenant-aware permissions, real-time status updates, and asynchronous notification processing through SQS and Lambda.
- Implemented idempotent payment handlers, transactional outbox processing, distributed tracing, structured logs, Sentry monitoring, automated database migrations, and Docker-based CI/CD releases to prevent duplicate transactions and improve production recoverability.

Vue Modernization and API Reliability Program

- Led the migration of legacy jQuery and Vue 2 workflows into **Vue 3, Composition API, TypeScript, Pinia, Vue Query, Vite, and reusable design-system components**, while preserving complex validation, pricing, access-control, and reporting behavior.
- Modernized supporting Node.js APIs with stronger validation, optimized PostgreSQL queries, Redis caching, OpenAPI contracts, retry-safe integrations, automated integration tests, and controlled staging-to-production deployment pipelines.
