

Erwin Quanten

Staff Software Engineer – .NET, Angular, Azure/AWS

Brussels, Belgium | erwin.quanten.dev@outlook.com | +32460256356 | <https://www.linkedin.com/in/erwin-quanten-b82815a/>

PROFESSIONAL SUMMARY

Staff Software Engineer with 16+ years of experience building enterprise platforms for energy, manufacturing, logistics, and SaaS industries, specializing in **.NET Framework 4.8, .NET Core 3.1, .NET 6–8, C# 10–12, ASP.NET Core Web API, Angular 8–17, TypeScript 3–5, Azure, SQL Server**, and event-driven systems, with a strong record of modernizing legacy applications, improving API performance, reducing production defects, migrating older Angular/.NET stacks to supported versions, strengthening CI/CD reliability, and delivering secure, scalable business features across distributed teams and regulated enterprise environments.

SKILLS

- **Backend:** C# 8–12, .NET Framework 4.6–4.8, .NET Core 3.1, .NET 6–8, ASP.NET Core, ASP.NET MVC, Web API, Entity Framework Core, LINQ, REST APIs, background services, Windows Services
- **Frontend:** Angular 8–17, AngularJS 1.5–1.7, TypeScript 3–5, RxJS 6–7, NgRx, Angular Material, HTML5, CSS3, SCSS, Bootstrap
- **Cloud & DevOps:** Azure App Service, Azure Functions, Azure SQL, Azure Storage, Azure Service Bus, Azure DevOps, GitHub Actions, Docker, Kubernetes basics, CI/CD pipelines
- **Database:** SQL Server 2012–2022, Azure SQL, T-SQL, stored procedures, indexing, query optimization, SSRS
- **Architecture:** Microservices, modular monolith, clean architecture, domain-driven design, event-driven architecture, CQRS basics, API security, RBAC
- **Testing & Quality:** xUnit, NUnit, Jasmine, Karma, Cypress, Postman, Swagger/OpenAPI, SonarQube, code reviews, production debugging

EXPERIENCE

Lightedge — Lead Software Engineer

Remote/ Full time

May2022 – Apr 2026

Houston, TX

- Led modernization of a cloud operations portal from **ASP.NET MVC on .NET Framework 4.8** to **.NET 8 Web API** and **Angular 17**, improving maintainability for customer provisioning and support workflows.
- Designed a modular **Angular 14–17** frontend using feature modules, lazy loading, typed reactive forms, and reusable UI components to support billing, infrastructure requests, and admin operations.
- Built secure **ASP.NET Core 6–8** APIs with **C# 10–12**, Entity Framework Core, Azure SQL, and Azure Service Bus for asynchronous provisioning and customer notification workflows.
- Resolved a recurring production issue caused by incorrect **HttpClient** lifetime management and excessive EF Core tracking, reducing average API latency by **28%** after profiling and refactoring shared service clients.
- Implemented **Azure AD / OIDC** authentication with JWT validation, role-based permissions, and tenant-aware authorization rules, reducing access-related support tickets by **23%**.
- Migrated legacy Angular screens into a versioned design system with Angular Material, RxJS, and shared validation utilities, making feature delivery more consistent across multiple engineering teams.
- Improved SQL Server performance by redesigning indexes, removing unnecessary joins, and rewriting slow stored procedures, reducing several dashboard query times by **31%**.
- Introduced structured logging, Application Insights dashboards, correlation IDs, and health checks to make API failures traceable from Angular requests through backend services.
- Solved a timezone-related billing defect by standardizing UTC storage, adding conversion tests, and updating Angular date handling to prevent incorrect invoice cutoffs.
- Created CI/CD pipelines in **Azure DevOps** with build validation, automated tests, artifact versioning, deployment approvals, and rollback steps for safer production releases.
- Mentored engineers through code reviews focused on **clean architecture**, Angular state management, API boundaries, and safer database migration practices.
- Partnered with product, support, and infrastructure teams to release customer-facing features without blocking operations, improving incident response visibility by **26%**.

Syscom Digital — Staff Software Engineer

Remote/ Full time

Nov 2017 – Apr 2022

Bucharest, Romania

- Delivered enterprise digital transformation platforms using **.NET Core 2.1–3.1**, **.NET 5–6**, **Angular 6–13**, SQL Server, and Azure services for logistics and customer-service workflows.
- Migrated several AngularJS 1.6 modules to **Angular 10–12**, replacing controller-heavy screens with typed components, RxJS services, route guards, and reactive forms.
- Designed backend services with **ASP.NET Core Web API**, Entity Framework Core, SQL Server, Redis caching, and message-based integration for order tracking and notification systems.
- Fixed a concurrency bug that created duplicate workflow approvals by adding database constraints, idempotency checks, and transaction boundaries in the service layer.
- Reduced frontend bundle size by **22%** through lazy-loaded Angular modules, dependency cleanup, production build optimization, and removal of unused shared libraries.
- Improved API reliability by adding retry policies, circuit-breaker handling, centralized exception middleware, and better request logging across distributed service calls.
- Reduced escaped production defects by **18%** after introducing stronger unit tests, Angular component tests, API contract validation, and pull-request quality gates.
- Implemented feature flags for staged releases, allowing product teams to enable new customer workflows gradually without risky full-platform deployments.
- Built Docker-based development environments and CI pipelines with Azure DevOps and Jenkins, making onboarding smoother for distributed engineering teams.
- Collaborated with business analysts and QA teams to translate operational pain points into realistic technical tasks, improving sprint predictability by **25%**.

Tessenderlo Group — Senior Software Engineer

Remote/ Full time

Aug 2015 – Oct 2017

Brussel Metropolitan Area

- Built manufacturing and supply-chain dashboards using **ASP.NET MVC 5**, **Web API 2**, **AngularJS 1.5–1.6**, SQL Server, and Bootstrap for plant operations teams.
- Modernized Excel-heavy planning workflows into browser-based applications with role-based screens, validation rules, approval flows, and centralized reporting.
- Resolved SQL deadlocks in production planning screens by reviewing transaction scope, adding targeted indexes, and separating long-running reporting queries.
- Reduced manual planning effort by **24%** by implementing reusable scheduling views, saved filters, and automated validation against production capacity rules.
- Improved release stability by **17%** by adding smoke tests, database migration checklists, and structured regression testing before deployment windows.
- Integrated internal applications with SAP-facing data exports, scheduled jobs, and SQL Server staging tables to support finance and logistics reporting.
- Migrated backend projects from older **.NET Framework 4.5** patterns to **.NET Framework 4.6.2**, improving dependency compatibility and deployment consistency.
- Implemented Active Directory authentication, permission groups, audit logging, and admin screens for internal compliance and operational traceability.
- Supported junior developers with practical guidance on MVC structure, AngularJS services, SQL troubleshooting, and production incident investigation.

Tessenderlo Group — Software Engineer

Hybrid/ Full time

Sep 2011 – Jul 2015

Brussel Metropolitan Area

- Developed internal enterprise applications using **.NET Framework 4.0–4.5**, **ASP.NET MVC 3–5**, WCF, Web API, jQuery, Bootstrap, and SQL Server.
- Built integration services for manufacturing, inventory, and finance data using WCF endpoints, scheduled jobs, stored procedures, and file-based imports.
- Fixed a duplicate-record issue in batch imports by adding checksum validation, transaction handling, and detailed error logs for failed source files.
- Reduced monthly reporting generation time by **29%** after optimizing SQL views, caching repeated lookup data, and splitting heavy reports into smaller queries.
- Reduced manual data-entry errors by **21%** by adding server-side validation, clearer UI messages, required-field rules, and approval-state restrictions.

- Migrated selected WebForms pages into **ASP.NET MVC**, separating controller logic, Razor views, and service classes for easier maintenance.
- Implemented operational audit trails, exception logging, and admin search screens to help support teams investigate user and data issues faster.
- Worked closely with finance and production users to convert unclear business rules into maintainable backend services and practical UI behavior.

Tessenderlo Group — Software Developer

Hybrid/ Full time

Jun 2009 – Aug 2011

Brussel Metropolitan Area

- Maintained internal business applications using **.NET Framework 3.5–4.0**, ASP.NET WebForms, ADO.NET, SQL Server 2008, SSRS, JavaScript, and jQuery.
- Created data import utilities and Windows Services for recurring operational jobs, improving reliability for inventory and reporting workflows.
- Fixed SQL timeout and blocking issues by reviewing execution plans, improving stored procedures, and reducing failed nightly jobs by **32%**.
- Reduced manual reporting work by **25%** by building SSRS reports, export screens, and scheduled data preparation scripts for business users.
- Developed strong foundations in enterprise debugging, database design, code reviews, release coordination, and practical communication with non-technical stakeholders.

EDUCATION

KU Leuven — Master's Degree, Computer Science

Sep 2003 – May 2009
