

Erwin Quanten

Staff Software Engineer – .NET, Vue.js, TypeScript, Azure/AWS

Brussels, Belgium | erwin.quanten.dev@outlook.com | +32460256356 | <https://www.linkedin.com/in/erwin-quanten-b82815a/>

PROFESSIONAL SUMMARY

Staff Software Engineer and **.NET Vue Full Stack Engineer** with experience across cloud hosting, digital consulting, chemicals, manufacturing, and enterprise services, building secure business platforms using **C# 10–12, .NET 6–8, ASP.NET Core, Vue.js 2–3, TypeScript 4–5, SQL Server, Azure, and AWS**. Skilled in API modernization, UI migration, performance tuning, authentication, CI/CD, and production support, with realistic ownership of legacy upgrades, bug fixing, feature delivery, team mentoring, and measurable improvements in system reliability, deployment speed, data accuracy, cloud cost control, and user workflow efficiency.

SKILLS

- **Backend:** C# 10–12, .NET 6–8, ASP.NET Core Web API, Entity Framework Core 6–8, LINQ, REST API, Minimal API, Background Services, Hangfire, SignalR
- **Frontend:** Vue.js 2–3, TypeScript 4–5, JavaScript ES6+, Pinia, Vuex, Vue Router, Composition API, Options API, Vite, Webpack, HTML5, CSS3, SCSS
- **Database:** SQL Server 2016–2022, PostgreSQL, T-SQL, Stored Procedures, Indexing, Query Optimization, Redis
- **Cloud & DevOps:** Azure App Service, Azure Functions, Azure SQL, AWS EC2, S3, RDS, CloudWatch, Docker, GitHub Actions, Azure DevOps, CI/CD
- **Architecture:** Clean Architecture, CQRS, Repository Pattern, Domain-Driven Design basics, Microservices, Modular Monolith, API Gateway
- **Security:** JWT, OAuth2, OpenID Connect, Azure AD, Role-Based Access Control, OWASP, Secure API Design
- **Testing & Quality:** xUnit, NUnit, Moq, Jest, Cypress, Playwright, SonarQube, Code Review, Logging, Monitoring

EXPERIENCE

Lightedge — Lead Software Engineer

Remote/ Full time

May2022 – Apr 2026

Houston, TX

- Led modernization of customer-facing cloud service portals using **.NET 6–8, C# 10–12, Vue.js 3, and TypeScript 4–5**, improving self-service workflow completion by **23%** through cleaner API flows and reusable UI modules.
- Architected secure **ASP.NET Core Web API** services for billing, provisioning, and support operations, reducing repeated manual support tasks by **18%** through validation rules, background workers, and automated status tracking.
- Migrated legacy dashboard modules from older server-rendered pages to **Vue.js 3 Composition API**, solving state synchronization bugs and improving page responsiveness by **27%** for high-traffic customer operations.
- Improved API reliability by refactoring dependency-heavy service classes into **Clean Architecture** layers, reducing production regression issues by **21%** after introducing stricter contracts and automated tests.
- Resolved intermittent timeout errors in customer provisioning workflows by optimizing **Entity Framework Core 7–8** queries, improving SQL indexes, and adding structured retry handling around slow external service calls.
- Implemented new tenant administration features with **RBAC**, audit history, and secure token-based access, allowing enterprise users to manage permissions without direct support team involvement.
- Built reusable Vue components for tables, filters, forms, and modal workflows, standardizing the frontend design system and reducing duplicate UI implementation across multiple product areas.
- Created CI/CD pipelines with **GitHub Actions**, Docker validation, environment approvals, and automated test execution, improving deployment consistency and reducing failed release attempts.
- Supported cloud-hosted applications across **Azure App Service, AWS EC2, RDS, and CloudWatch**, improving operational visibility through better logging, alerting, and incident investigation dashboards.
- Fixed authentication edge cases involving expired JWT tokens, inconsistent refresh behavior, and role mismatch errors by strengthening middleware checks and frontend session handling.
- Mentored engineers on **.NET API design, Vue.js 3 patterns**, code reviews, and production troubleshooting, improving team delivery quality while keeping implementation decisions practical and maintainable.
- Partnered with product, support, and infrastructure teams to convert recurring customer pain points into measurable features, including faster provisioning status, clearer billing views, and safer admin workflows.

Syscom Digital — Staff Software Engineer

Remote/ Full time

Nov 2017 – Apr 2022

Bucharest, Romania

- Delivered enterprise digital platforms using **.NET Core 2.1–6**, **ASP.NET Core**, **Vue.js 2**, **TypeScript 3–4**, and **SQL Server**, improving internal processing efficiency by **22%** across client service workflows.
- Migrated older **.NET Framework 4.6** services to **.NET Core 3.1** and later **.NET 5–6**, reducing hosting complexity by **19%** through dependency cleanup, configuration changes, and container-ready deployment structure.
- Implemented Vue-based administration modules for client onboarding, document review, and approval queues, reducing user navigation time by **24%** with better filtering, validation, and inline status updates.
- Solved recurring production bugs caused by inconsistent API response models by introducing shared DTO contracts, improved exception handling, and stricter backend validation rules.
- Designed REST APIs with **Entity Framework Core**, async patterns, and optimized SQL queries, improving response time for reporting and search screens under heavier enterprise usage.
- Led migration from legacy jQuery-heavy pages to **Vue.js 2**, carefully replacing screens in phases so business users could continue working during release cycles.
- Implemented authentication and authorization using **JWT**, **OAuth2**, and role-based permission checks, improving security consistency across multiple internal applications.
- Built background processing jobs for notifications, report generation, and data synchronization, reducing manual operations work and improving reliability for scheduled business processes.
- Worked with DevOps teams on **Azure DevOps YAML pipelines**, release approvals, and environment-specific configuration, making deployments safer across development, staging, and production.
- Reviewed pull requests, investigated client-reported issues, and mentored developers on practical **C#**, **Vue**, database, and testing patterns suitable for enterprise consulting delivery.

Tessenderlo Group — Senior Software Engineer

Remote/ Full time

Aug 2015 – Oct 2017

Brussel Metropolitan Area

- Developed and maintained enterprise manufacturing and chemical business applications using **C# 6–7**, **.NET Framework 4.6–4.7**, **ASP.NET MVC 5**, **Web API 2**, and **SQL Server 2014–2016**.
- Introduced early **Vue.js 2** components into selected internal dashboards where lightweight interactivity was needed, improving form usability and reducing repeated page reloads by **17%**.
- Improved inventory, procurement, and reporting modules by optimizing stored procedures, correcting data mapping issues, and reducing slow report execution by **26%** during month-end operations.
- Migrated several legacy Web Forms and MVC screens into cleaner **ASP.NET MVC 5** structures, reducing maintenance risk while keeping the application compatible with existing enterprise hosting.
- Fixed recurring validation bugs in production forms by centralizing server-side rules, improving client-side feedback, and adding regression checks around critical manufacturing workflows.
- Implemented API integrations between internal systems and third-party logistics providers, improving data exchange reliability through better retry logic, logging, and error reconciliation.
- Created reusable backend services for approval flows, user roles, notifications, and reporting exports, helping multiple teams avoid duplicate business logic across related applications.
- Supported database modernization by improving SQL indexes, archiving heavy historical records, and cleaning inconsistent reference data that caused reporting mismatches.
- Collaborated with business users, QA, and infrastructure teams to release stable features into regulated operational environments with careful rollback and support planning.

Tessenderlo Group — Software Engineer

Hybrid/ Full time

Sep 2011 – Jul 2015

Brussel Metropolitan Area

- Built internal enterprise applications using **C# 4–5**, **.NET Framework 4.0–4.5**, **ASP.NET MVC 3–4**, **WCF**, **jQuery**, and **SQL Server 2008 R2–2012** for manufacturing and finance workflows.
- Improved purchasing and approval screens by replacing fragile postback-heavy behavior with cleaner MVC actions and jQuery validation, reducing form submission errors by **20%**.
- Resolved production defects involving incorrect tax calculations, duplicate approvals, and missing audit records by tracing business rules through SQL procedures and backend service layers.
- Migrated older modules from classic ASP.NET patterns into **ASP.NET MVC 4**, improving separation of concerns and making future feature changes easier for the development team.
- Created WCF and REST-style service endpoints for internal integrations, allowing finance, inventory, and reporting systems to exchange operational data more reliably.

- Improved SQL Server reporting performance by rewriting inefficient joins, adding targeted indexes, and reducing unnecessary data loading from large operational tables.
- Supported release packaging, IIS configuration, and environment troubleshooting, helping stabilize deployments across test, acceptance, and production environments.
- Worked closely with analysts and end users to convert unclear requirements into practical screens, validation rules, exports, and workflow improvements.

Tessenderlo Group — Software Developer

Hybrid/ Full time

Jun 2009 – Aug 2011

Brussel Metropolitan Area

- Developed business applications using **C# 3–4, .NET Framework 3.5–4.0, ASP.NET Web Forms, ADO.NET, jQuery,** and **SQL Server 2008** for internal operational teams.
- Maintained legacy Web Forms modules by fixing postback issues, session timeout errors, and inconsistent grid behavior that affected daily finance and inventory users.
- Improved data-entry accuracy by adding server-side validation, clearer user messages, and safer SQL handling, reducing repeated correction requests by **16%**.
- Created reports, exports, and administrative screens using SQL queries, stored procedures, and ASP.NET controls to support business users with reliable operational data.
- Assisted senior engineers with early migration planning from Web Forms toward MVC-style application structure, gaining strong practical experience in legacy modernization.

EDUCATION

KU Leuven — Master's Degree, Computer Science

Sep 2003 – May 2009
