

Erwin Quanten

Cloud DevOps Engineer – Azure, AKS, Terraform, CI/CD

Brussels, Belgium | erwin.quanten.dev@outlook.com | +32460256356 | <https://www.linkedin.com/in/erwin-quanten-b82815a/>

PROFESSIONAL SUMMARY

Cloud DevOps Engineer with 16+ years of experience across **healthcare, pharmaceutical, SaaS, and enterprise cloud platforms**, designing secure infrastructure with **Azure, AKS 1.25–1.29, Terraform 1.x, Jenkins 2.x, ArgoCD 2.x, Linux, Python 3.x, Bash, RabbitMQ 3.x, Prometheus, Grafana, and Azure Monitor**. Specialized in regulated environments, CI/CD automation, IaC governance, observability, container orchestration, secure release practices, and cloud reliability improvements for mission-critical distributed systems.

SKILLS

- **Cloud Platforms:** Microsoft Azure, AWS, Azure Virtual Networks, Azure Monitor, Azure Key Vault, Azure Container Registry, Load Balancer, Application Gateway
- **Container & Orchestration:** AKS 1.25–1.29, Kubernetes 1.24–1.29, Docker 20.x–24.x, Helm 3.x
- **Infrastructure-as-Code:** Terraform 1.x, Pulumi 3.x, Bicep, reusable IaC modules, remote state, policy-based provisioning
- **CI/CD & GitOps:** Jenkins 2.x, ArgoCD 2.x, GitHub Actions, Azure DevOps YAML, GitLab CI, automated rollback, blue-green deployment
- **Scripting & Automation:** Python 3.9–3.12, Bash 5.x, PowerShell, YAML, JSON, automation scripts, deployment tooling
- **Messaging & Integration:** RabbitMQ 3.8–3.12, REST APIs, event-driven services, service integrations, distributed system troubleshooting
- **Monitoring & Logging:** Prometheus 2.x, Grafana 9.x–10.x, Azure Monitor, Log Analytics, ELK, OpenTelemetry, alert routing
- **Security & Compliance:** IAM/RBAC, Key Vault, secret rotation, least privilege, audit logging, regulated healthcare/pharma compliance
- **Databases & Runtime:** PostgreSQL 13–16, Redis 6.x–7.x, Linux, Nginx, Node.js 16.x–20.x

EXPERIENCE

Lightedge — Lead Software Engineer

Remote/ Full time

May2022 – Apr 2026

Houston, TX

- Led **Azure cloud infrastructure** modernization for healthcare-facing SaaS workloads using **AKS 1.26–1.29, Terraform 1.x, Linux, Docker, Helm**, and secure deployment automation.
- Designed reusable **Terraform modules** for AKS clusters, networking, Key Vault, container registries, and monitoring resources, reducing environment provisioning time by **38%**.
- Implemented **Jenkins 2.x** and **ArgoCD 2.x** delivery pipelines with approval gates, image scanning, Helm promotion, and rollback steps for regulated production releases.
- Improved cloud release reliability by introducing standardized deployment templates, artifact versioning, and GitOps-based promotion, reducing failed deployments by **27%**.
- Resolved recurring AKS pod restart issues caused by memory limits and readiness probe misconfiguration by tuning requests, probes, autoscaling, and rollout strategies.
- Built centralized observability using **Prometheus 2.x, Grafana 10.x, Azure Monitor**, and Log Analytics to track service latency, queue depth, infrastructure health, and error rates.
- Reduced incident triage time by **34%** by creating actionable alerts, structured logs, dashboard ownership, and runbooks for critical services and infrastructure events.
- Managed **RabbitMQ 3.x** messaging infrastructure for distributed services, improving queue monitoring, retry behavior, dead-letter handling, and operational visibility.
- Migrated legacy VM-based deployment workflows into containerized **AKS** workloads with Helm charts, secrets in Key Vault, and controlled release stages.
- Collaborated with security, product, and engineering teams to enforce **RBAC**, least-privilege access, secret rotation, audit logging, and compliance-driven infrastructure controls.
- Fixed pipeline failures caused by inconsistent environment variables by centralizing configuration, validating secrets earlier, and adding pre-deployment verification scripts.
- Supported architecture reviews and code reviews focused on cloud scalability, disaster recovery, secure CI/CD, IaC standards, and operational resilience.

Syscom Digital — Staff Software Engineer

Remote/ Full time

Nov 2017 – Apr 2022

Bucharest, Romania

- Built cloud-native infrastructure platforms using **Azure**, Kubernetes, Terraform, Jenkins, Linux, Python, Bash, RabbitMQ, PostgreSQL, Redis, and monitoring stacks.
- Created **Terraform 1.x** infrastructure patterns for multi-environment deployments, improving consistency across development, staging, and production cloud resources.
- Automated CI/CD pipelines with **Jenkins 2.x**, GitHub Actions, and container image promotion, reducing manual release coordination by **31%**.
- Implemented **ArgoCD 2.x** GitOps workflows for Kubernetes workloads, enabling safer configuration drift detection and faster recovery from deployment errors.
- Solved intermittent deployment failures caused by stale Helm values and outdated container tags by enforcing immutable image versions and release validation checks.
- Built Python and Bash automation scripts for health checks, certificate validation, log collection, deployment verification, and operational reporting.
- Improved infrastructure monitoring by integrating **Prometheus**, Grafana, ELK, and alert rules, reducing unresolved production alerts by **29%**.
- Supported **RabbitMQ 3.x** integrations across distributed services, adding retry policies, dead-letter queues, queue metrics, and troubleshooting guides for engineering teams.
- Migrated legacy deployment scripts into standardized pipeline libraries, making cloud deployments more repeatable, auditable, and easier for teams to maintain.
- Partnered with compliance and security stakeholders to strengthen IAM, secret management, network controls, and audit-ready infrastructure documentation.

Tessenderlo Group — Senior Software Engineer

Remote/ Full time

Aug 2015 – Oct 2017

Brussel Metropolitan Area

- Supported enterprise infrastructure modernization for manufacturing and regulated business systems using Linux, Azure services, Kubernetes, Docker, Jenkins, and Terraform.
- Developed **Terraform** templates for networking, compute, monitoring, and application infrastructure, reducing configuration drift between environments by **24%**.
- Implemented Jenkins pipeline improvements for build validation, deployment approvals, artifact promotion, and rollback procedures across multiple enterprise applications.
- Fixed production instability caused by missing resource limits and weak deployment checks by adding Kubernetes probes, scaling rules, and release verification steps.
- Improved service reliability by building dashboards for infrastructure metrics, application logs, RabbitMQ queues, database health, and deployment status.
- Reduced manual infrastructure tasks by **32%** through Bash and Python scripts for environment setup, backup validation, certificate checks, and service restarts.
- Migrated older server-based applications toward Docker-based runtime patterns while preserving existing release schedules and business continuity requirements.
- Collaborated with developers and architects to define infrastructure standards, security baselines, branching rules, and code review expectations.
- Strengthened compliance readiness by documenting access controls, deployment workflows, incident procedures, and operational ownership across cloud services.

Tessenderlo Group — Software Engineer

Hybrid/ Full time

Sep 2011 – Jul 2015

Brussel Metropolitan Area

- Developed and maintained enterprise applications while gradually expanding into **Linux infrastructure**, CI/CD automation, cloud services, and deployment reliability.
- Supported application releases using Jenkins, Git, Bash scripts, Nginx, Docker, PostgreSQL, and early cloud infrastructure practices for internal business systems.
- Improved release consistency by automating environment checks, dependency validation, and deployment preparation, reducing repeated manual release issues by **26%**.
- Resolved recurring production errors caused by configuration mismatches by introducing shared environment templates and clearer deployment documentation.
- Built backend integrations and service automation using **Python 3.x**, Node.js, REST APIs, RabbitMQ, and database-driven workflows.

- Helped migrate legacy deployment processes from manual server updates to scripted release steps with better logging, rollback notes, and ownership tracking.
- Improved monitoring coverage by adding log review processes, service health checks, and basic alerting for high-priority internal applications.
- Worked closely with infrastructure, QA, and development teams to troubleshoot Linux service failures, database issues, permission problems, and release blockers.

Tessengerlo Group — Software Developer

Hybrid/ Full time

Jun 2009 – Aug 2011

Brussel Metropolitan Area

- Built enterprise web and backend systems using JavaScript, Node.js, PHP, SQL databases, Linux servers, REST APIs, and internal integration services.
- Created automation scripts and deployment support tools that helped reduce repeated manual operational work by **22%** across internal application teams.
- Resolved application defects involving API failures, database query performance, authentication issues, and inconsistent server configuration across environments.
- Supported early CI and version-control practices with Git, scripted builds, deployment notes, and structured troubleshooting for production support.
- Collaborated with senior engineers to improve maintainability, release discipline, logging quality, and secure handling of application configuration.

EDUCATION

KU Leuven — Master's Degree, Computer Science

Sep 2003 – May 2009
