

Erwin Quanten

Staff Software Engineer – Java, Spring Boot, Vue, AWS

Brussels, Belgium | erwin.quanten.dev@outlook.com | +32460256356 | <https://www.linkedin.com/in/erwin-quanten-b82815a/>

PROFESSIONAL SUMMARY

Staff Software Engineer specializing in **Java 8–21**, **Spring Boot 1.5–3.3**, and **Angular 2–18** across cloud, SaaS, telecom, and industrial enterprise platforms. Strong background in modernizing legacy monoliths into secure microservices, building responsive Angular applications, improving API reliability, and leading production migrations with measurable business impact. Experienced with **AWS**, **Docker**, **Kubernetes**, **PostgreSQL**, **Kafka**, CI/CD, observability, and performance tuning, with a practical focus on reducing incidents, accelerating releases, mentoring engineers, and delivering maintainable systems for distributed teams.

SKILLS

- **Backend: Java 8–21**, **Spring Boot 1.5–3.3**, Spring Framework 3–6, Spring Security 4–6, Hibernate 4–6, JPA, REST API, Microservices, OAuth2, JWT
- **Frontend: Vue 2.5–3.5**, TypeScript 3–5, JavaScript ES6+, Vue Router 3–4, Vuex 3–4, Pinia 2, Vuetify 1–3, Webpack 3–5, Vite 3–5
- **Cloud & DevOps: AWS**, Docker, Kubernetes, GitHub Actions, Jenkins, Azure DevOps, Terraform, CI/CD, SonarQube, Linux
- **Database & Messaging: PostgreSQL**, Oracle, MySQL, SQL Server, Redis, Kafka, RabbitMQ, Elasticsearch
- **Testing: JUnit 4–5**, Mockito 2–5, Testcontainers 1.15–1.19, Cypress 8–13, Selenium, Integration Testing
- **Engineering: System Design**, Legacy Migration, API Optimization, Code Review, Agile Delivery, Production Support, Mentoring

EXPERIENCE

Lightedge — Lead Software Engineer

Remote/ Full time

May2022 – Apr 2026

Houston, TX

- Led cloud operations platform development for hosting and managed infrastructure teams using **Java 17–21**, **Spring Boot 2.7–3.3**, **Vue 3.2–3.5**, TypeScript 4.8–5.4, and AWS services.
- Designed multi-tenant customer portal modules for provisioning requests, service inventory, billing visibility, and support workflows with **Vue Composition API**.
- Migrated legacy **Spring Boot 2.7** services to **Spring Boot 3.x** and Jakarta EE namespaces, resolving dependency conflicts, Hibernate 6 mapping issues, and security filter regressions.
- Replaced Vuex-heavy screens with **Pinia 2** and composables, reducing duplicated state logic by **27%** and making onboarding changes easier for support engineers.
- Improved API latency by **31%** through PostgreSQL index tuning, Redis caching, DTO projection cleanup, and asynchronous Kafka-based processing for slow provisioning events.
- Fixed a production issue where expired **JWT refresh tokens** triggered silent Vue route loops by adding interceptor guards, token rotation checks, and structured error handling.
- Implemented role-based access control with **Spring Security 6**, OAuth2 resource server configuration, and Vue Router guards for internal, partner, and customer roles.
- Built reusable **Vue 3** data-table, form-schema, and audit-log components that helped product teams ship new admin features with consistent validation and permissions.
- Reduced deployment rollback time by **24%** by improving GitHub Actions pipelines, Docker image tagging, Kubernetes readiness probes, and release verification scripts.
- Supported observability with CloudWatch, OpenTelemetry, structured logs, and custom business metrics so platform issues could be triaged before customer escalation.
- Mentored backend and frontend engineers through code reviews, architecture sessions, and production-readiness checklists focused on secure **Java APIs** and **Vue performance**.
- Coordinated with product, infrastructure, and security stakeholders to keep feature delivery flexible while maintaining compliance controls for cloud-hosted enterprise customers.

Syscom Digital — Staff Software Engineer

Remote/ Full time

Nov 2017 – Apr 2022

Bucharest, Romania

- Delivered enterprise digital transformation applications for telecom and public-sector clients using **Java 8–11**, **Spring Boot 1.5–2.6**, **Vue 2.5–2.7**, Vuex 3, and PostgreSQL.
- Architected REST services for case management, customer profile, document workflow, and notification modules with Spring MVC, JPA, Hibernate 5, and OpenAPI contracts.
- Migrated monolithic **Java 8** services toward modular **Spring Boot 2.x** services, solving bean lifecycle issues, transaction boundaries, and Maven dependency conflicts.
- Built **Vue 2** dashboards with Vuetify 1–2, Vue Router 3, and Vuex modules for operational teams handling approvals, escalations, and SLA monitoring.
- Reduced API error rates by **22%** by adding validation layers, global exception mapping, integration tests, and clearer frontend error messages for business users.
- Improved page load time by **29%** through lazy-loaded Vue routes, Webpack bundle splitting, optimized API pagination, and cached reference-data lookups.
- Fixed a recurring issue where duplicate workflow submissions created inconsistent approval states by adding idempotency keys and database-level constraints.
- Introduced CI/CD improvements with Jenkins, Docker, SonarQube, and automated test gates so release candidates moved across environments with fewer manual checks.
- Collaborated directly with client analysts to translate complex compliance workflows into flexible **Java services** and maintainable **Vue components**.
- Guided engineers on Java clean architecture, Vue component structure, Git branching discipline, and production incident analysis across multiple delivery streams.

Tessenderlo Group — Senior Software Engineer

Remote/ Full time

Aug 2015 – Oct 2017

Brussel Metropolitan Area

- Built manufacturing and supply-chain applications for chemical operations using **Java 8**, Spring MVC 4, early Spring Boot 1.x services, JSP/jQuery, and selected **Vue 1–2** screens.
- Developed plant inventory, batch tracking, procurement approval, and logistics reporting features integrated with Oracle databases and internal ERP data feeds.
- Introduced **Vue 2** for lightweight operational dashboards where full SPA complexity was not required, keeping the architecture realistic for the team's maturity.
- Migrated legacy Java 6/7 modules to **Java 8**, resolving date/time handling bugs, library incompatibilities, and servlet container configuration issues.
- Reduced manual reconciliation work by **23%** by automating inventory variance checks and exposing exception queues through secure web dashboards.
- Improved nightly report stability by **18%** after replacing fragile SQL scripts with validated service-layer jobs, retry handling, and better failure logging.
- Fixed an intermittent transaction issue where concurrent shipment updates locked inventory rows by tuning isolation levels and moving slow reads outside write transactions.
- Partnered with QA and plant stakeholders to validate edge cases around batch quantities, shipment cutoffs, and user permissions before production releases.
- Helped standardize **Java coding practices**, review templates, database migration scripts, and release notes across a distributed engineering team.

Tessenderlo Group — Software Engineer

Hybrid/ Full time

Sep 2011 – Jul 2015

Brussel Metropolitan Area

- Developed internal manufacturing, finance, and logistics applications using **Java 6–8**, Spring Framework 3–4, JSP, jQuery, Hibernate 4, Oracle, and Apache Tomcat.
- Built reusable backend services for order approvals, material lookup, supplier records, and reporting workflows used by regional business units.
- Modernized older Struts and servlet-based screens into **Spring MVC** flows, improving maintainability without introducing risky frontend frameworks too early.
- Reduced support tickets by **21%** by fixing validation gaps, clarifying error messages, and adding server-side checks for shipment and invoice forms.
- Improved SQL-heavy reporting screens by **26%** through query refactoring, index recommendations, pagination, and scheduled pre-aggregation jobs.

- Solved production defects involving character encoding, session timeout behavior, and inconsistent browser rendering across Internet Explorer and early Chrome versions.
- Supported early frontend modernization discussions by separating Java controllers from view logic so later component-based UI work could be introduced safely.
- Worked flexibly across backend defects, database scripts, UI fixes, release testing, and user support when manufacturing deadlines required fast turnaround.

Tessenderlo Group — Software Developer

Hybrid/ Full time

Jun 2009 – Aug 2011

Brussel Metropolitan Area

- Developed enterprise web modules for chemical business operations using **Java 6**, Spring 2.5–3, Struts 1/2, JSP, jQuery, JDBC, Oracle, and SQL Server.
- Implemented form-based workflows, reporting pages, and data import utilities that helped business users reduce spreadsheet-driven manual processing by **19%**.
- Fixed early production issues around null pointer exceptions, broken SQL joins, invalid date parsing, and inconsistent validation between browser and server logic.
- Improved batch import reliability by **16%** by adding file format validation, transaction rollback handling, and clearer logging for failed business records.
- Built a strong foundation in enterprise **Java delivery** by supporting requirements analysis, coding, peer reviews, testing, deployment checks, and user issue resolution.

EDUCATION

KU Leuven — Master's Degree, Computer Science

Sep 2003 – May 2009
