

Erwin Quanten

Staff Software Engineer – PHP, Vue.js, Laravel, Symfony, AWS

Brussels, Belgium | erwin.quanten.dev@outlook.com | +32460256356 | <https://www.linkedin.com/in/erwin-quanten-b82815a/>

PROFESSIONAL SUMMARY

Staff Software Engineer specializing in **PHP 8.1–8.4**, **Laravel 9–12**, **Vue.js 2.7–3.5**, TypeScript, MySQL/PostgreSQL, Redis, Docker, and AWS, with strong experience across logistics, SaaS, industrial services, and enterprise workflow platforms, delivering secure APIs, modular frontends, payment and workflow systems, legacy migrations, CI/CD automation, observability, and performance tuning while reducing production defects, improving release speed by 22%, increasing API throughput by 18%, and guiding distributed teams through practical architecture decisions, code reviews, incident recovery, and scalable engineering standards for high-traffic customer-facing products.

SKILLS

- **Backend:** **PHP 5.2–8.4**, **Laravel 5.1–12**, Symfony 1.4–2, Zend Framework 1–2, REST APIs, Laravel Sanctum, queues, events, policies, service-layer architecture
- **Frontend:** **Vue.js 2.0–3.5**, TypeScript, JavaScript, Pinia, Vuex, Vue Router, Vite, Axios, Blade, Bootstrap, jQuery
- **Database & Cache:** **MySQL 5.7–8**, PostgreSQL, Redis, query optimization, indexing, transactions, migrations, audit tables
- **Cloud & DevOps:** **AWS**, Docker, GitHub Actions, CI/CD, Linux, Nginx, blue-green deployment checks, environment configuration
- **Testing & Quality:** PHPUnit, Pest, Cypress, API contract testing, code review, performance profiling, incident debugging
- **Architecture:** Monolith modernization, modular Laravel architecture, API versioning, event-driven workflows, secure multi-tenant systems

EXPERIENCE

Lightedge — Lead Software Engineer

Remote/ Full time

May 2022 – Apr 2026

Houston, TX

- Led a **PHP 8.1–8.4** and **Laravel 9–12** modernization program for a logistics SaaS platform, separating billing, shipment, and customer-service modules into maintainable bounded contexts.
- Built **Vue.js 3.2–3.5** dashboards with TypeScript, Pinia, Vite, and reusable design-system components so operations teams could manage exceptions without waiting for backend support.
- Reworked slow Laravel queue workers, Redis cache keys, and MySQL indexes after recurring timeout errors, reducing delayed job failures by **24%** during peak fulfillment windows.
- Migrated legacy PHP services from mixed procedural code into Laravel service classes, Form Requests, policies, and events while keeping production traffic stable through phased releases.
- Implemented shipment audit trails, role-based access, and signed file-download workflows that improved compliance visibility and reduced support investigation time by **19%**.
- Resolved a production bug where duplicate webhook retries created inconsistent invoices by adding idempotency keys, database constraints, and retry-safe queue processing.
- Designed REST APIs for partner integrations using Laravel Sanctum, OpenAPI contracts, and versioned controllers, improving external API success rates by **17%**.
- Introduced feature flags, blue-green deployment checks, and GitHub Actions pipelines so Vue and Laravel releases could ship safely without long maintenance windows.
- Improved frontend performance by replacing heavy watcher chains with computed state, route-level lazy loading, and API pagination, cutting dashboard load time by **21%**.
- Mentored engineers through code reviews, debugging sessions, and architecture discussions that raised team consistency across Laravel validation, Vue composition patterns, and testing.
- Added PHPUnit, Pest, Cypress, and contract tests around fragile payment and delivery workflows, reducing regression defects by **23%** across major releases.
- Worked flexibly across backend, frontend, DevOps, and incident response, moving between API design, Vue troubleshooting, AWS logs, Docker builds, and stakeholder demos as priorities changed.

Syscom Digital — Staff Software Engineer

Remote/ Full time

Nov 2017 – Apr 2022

Bucharest, Romania

- Architected **PHP 7.2–8.1** and **Laravel 5.6–9** backend services for enterprise commerce and workflow products serving distributed client teams across Europe.

- Delivered Vue.js 2.5–3.2 modules for catalog management, approval flows, and reporting screens, using Vuex, Vue Router, Axios, and component-driven UI patterns.
- Fixed a recurring memory-leak issue in long-running import commands by chunking CSV processing, optimizing Eloquent queries, and adding queue visibility monitoring.
- Led migration from legacy Laravel controllers into service-layer architecture, improving testability and reducing feature delivery rework by **18%**.
- Upgraded older Vue 2 pages into Composition API-ready patterns where practical, preparing the frontend for Vue 3 adoption without breaking daily operations.
- Improved MySQL query plans, Redis caching, and API response serialization, lowering average report-generation time by **26%** for large customer datasets.
- Implemented secure authentication, permission groups, password reset flows, and audit logging with Laravel policies and middleware for multi-tenant customer portals.
- Solved inconsistent deployment errors by standardizing Docker images, environment variables, migrations, and rollback procedures across staging and production.
- Created reusable Vue form builders and Laravel validation contracts that reduced repeated UI and API code by **22%** across internal product teams.
- Coached developers on practical debugging, Git workflow, pull-request quality, and balancing clean architecture with delivery speed in client-facing releases.

Tessenderlo Group — Senior Software Engineer

Remote/ Full time

Aug 2015 – Oct 2017

Brussel Metropolitan Area

- Built **PHP 5.6–7.1** and **Laravel 5.1–5.5** applications for industrial service operations, procurement tracking, and internal approval workflows.
- Introduced Vue.js 2.0–2.4 for selected interactive screens after replacing fragile jQuery-heavy forms with reusable components and clearer frontend state handling.
- Resolved a critical stock-adjustment bug caused by race conditions by adding transaction boundaries, database locks, and clearer validation around warehouse updates.
- Modernized older PHP modules into Laravel routing, controllers, Blade templates, and service classes, improving maintainability without forcing a risky full rewrite.
- Optimized SQL joins, indexes, and batch exports for operations reports, reducing heavy report execution time by **25%** during month-end processing.
- Implemented role-based screens and approval notifications that improved procurement follow-up speed by **16%** for business users across multiple departments.
- Created API endpoints for internal integrations using structured JSON responses, token checks, and defensive validation to prevent malformed downstream records.
- Improved release reliability by documenting deployment steps, adding smoke checks, and separating configuration from application code across environments.
- Supported cross-functional users directly, translating production issues into reproducible tickets and fast fixes across PHP, SQL, frontend, and server configuration.

Tessenderlo Group — Software Engineer

Hybrid/ Full time

Sep 2011 – Jul 2015

Brussel Metropolitan Area

- Developed **PHP 5.3–5.6** web applications with Symfony 2, Zend Framework 1–2, MySQL, jQuery, and Bootstrap for internal industrial business systems.
- Built order-entry, document-management, and reporting features that replaced spreadsheet-driven processes with searchable and permission-controlled web workflows.
- Fixed recurring form-validation errors by centralizing server-side validation rules, improving error messages, and adding stronger client-side checks with jQuery.
- Refactored duplicated PHP scripts into reusable classes and shared helpers, reducing maintenance effort by **20%** across several internal applications.
- Improved database performance by reviewing slow query logs, normalizing lookup tables, and adding indexes that reduced common search latency by **23%**.
- Implemented CSV export, PDF generation, and email notification features for business teams that needed faster access to operational records.
- Helped migrate applications from older PHP runtime settings to cleaner configuration files, safer error handling, and more predictable deployment behavior.
- Worked closely with analysts and operations users to adjust requirements quickly, proving flexible across backend fixes, UI changes, SQL reports, and release support.

Tessengerlo Group — Software Developer

Hybrid/ Full time

Jun 2009 – Aug 2011

Brussel Metropolitan Area

- Created **PHP 5.2–5.3** applications with Symfony 1.4, Zend Framework 1, MySQL, HTML, CSS, JavaScript, and jQuery for early business workflow tools.
- Maintained legacy PHP pages by fixing session, upload, and encoding bugs that affected internal users working with documents and customer records.
- Built CRUD screens, admin panels, and basic reporting modules while learning secure input handling, database normalization, and practical debugging discipline.
- Improved small internal tools by cleaning duplicated SQL, stabilizing form submissions, and reducing repeated user-reported errors by **15%**.
- Collaborated with senior engineers during releases, testing fixes carefully and documenting steps so production support became smoother for business users.

EDUCATION

KU Leuven — Master's Degree, Computer Science

Sep 2003 – May 2009
